Applied GCE

6962 01 – Customising Applications

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please call our GCE line on 0844 576 0025, our GCSE team on 0844 576 0027, or visit our qualifications website at www.edexcel.com. For information about our BTEC qualifications, please call 0844 576 0026, or visit our website at www.btec.co.uk.

If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Ask The Expert can be accessed online at the following link:

<http://www.edexcel.com/Aboutus/contact-us/>

Alternatively, you can speak directly to a subject specialist at Pearson about Edexcel qualifications on our dedicated ICT telephone line: 0844 372 2186

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Unit 12: Customising Applications (6962)

General Comments

There were few submissions in this moderation window. Most centres submitted the sample required on one disk and included the e-sheets and candidate authentication sheets. The majority were labelled according to the correct naming conventions as detailed in the document "Moderation of e-Portfolios: Guidance for Centres". Many candidates' e-portfolios were in the correct file formats, within the stated file size of 25 MB and most contained a clear index file which started the e-portfolio.

It was also good to see many assessors giving clear feedback in the e-sheets explaining the assessment decisions made and marks awarded. Refer to the section on administration at the end of this report which details some poor practice relating to the submission of work for moderation.

On the whole most candidates addressed the strands correctly and most assessors awarded marks according to the specification. However, there are still instances of candidates being placed in too high a mark band for the evidence produced.

Comments on strand (a)

On the whole, candidates are producing good functional specifications whereby moderators can clearly see who, what, where etc. However, there are still instances of full marks being awarded when the success criteria given is not really measurable.

Comments on strand (b)

It was nice to see how many candidates addressed this strand well and had clearly included evidence of the design of selection, iteration and sequential searching. However, there are still many instances where the design of coded events is not really documented or present. It is expected that the candidates will provide evidence that clearly shows what events are going to take place and, for the higher mark bands, how they are going to happen. This can be done using a range of techniques e.g .flow charts, DFDs, pseudo code etc. It is imperative that the design clearly shows selection, iteration and a sequential search.

Prototyping was usually present and it was clear some candidates had spent a great deal of time and effort providing detailed prototypes and detailed evaluations of each.

It would appear that where candidates do this very well there is good evidence of liaising with a client and clear evidence that they have developed the product following feedback, fully documenting the entire process. However, at times it candidates included a prototype system/commentary of system that did not really address the higher marks.

The top of mark band two requires detailed comments about how well it meets the functional requirements.

Comments on strand (c)

Most centres are providing projects which are suitable for A2 and it was very pleasing to see some candidates using loops and different types of selection appropriately. However, at times, there is evidence of candidates being placed in too high a mark band for the evidence present.

It is a fundamental requirement of this unit/strand that candidates write their own code to include selection and iteration. At mark band two and higher it is expected there will be different types of each. At times there was some evidence of selection but iteration was missing entirely. It would be helpful if candidates would comment their code to show where they think iteration and selection is taking place.

Standard ways of working are also important in this strand, with regards to programming code that includes good use of indentation and comments clearly explaining the purpose of the code. Very few candidates included comments in the code and very few identified what was their own code.

Comments on strand (d)

Those candidates who had included good measurable objectives in their specification did this very well indeed, as did those who had worked closely with a client.

On the whole this strand is being approached very positively with candidates including detailed test plans and evidence of the results. There was some very good evidence of formative testing in conjunction with clients/prototyping and refinements.

There were very few cases of test plans being put forward with no actual proof of results.

Comments on strand (e)

There are a significant number of marks for evaluation in this unit and again, those candidates with a good functional specification including clear objectives and success criteria and those who worked closely with a client produced some excellent evidence.

Many candidates are now ensuring there is a clear evaluation of the code they have written themselves and there were some very thoughtful considerations of alternative solutions. However, some candidates are still not appreciating the importance of this aspect of the evaluation.

It is worth reiterating that Mark Band 1 requires candidates to comment on the effectiveness of their coding and reach some conclusion about whether or not it was the best way to meet the requirements. Mark band two requires consideration of alternative solutions and the justification for the

use of coding. Mark band three requires full justification for the use of coding.

Grade Boundaries

Centres are reminded that the GCE in Applied ICT is an Awarded qualification. As such, grade boundaries are subject to review each series for both written paper and coursework units.

Grade boundaries for this, and all other papers, can be found on the website on this link:
