3. A survey carried out in 2004 found that children attending deprived schools were reported to have more tooth decay than children in non-deprived schools. The survey identified a relationship between socio-economic status and tooth decay.

Proportion of children with tooth decay in primary (age 5 and 8) or permanent (age 12 and 15) teeth by school deprivation status

Source: www.statistics.gov.uk

(a) (i) Using the information given, identify the age group that experienced the most tooth decay.

.....

.....

(1)

(ii) Using the information given, identify the age group with the lowest tooth decay in non-deprived schools.
