### Instructions to Candidates

In the boxes above, write your centre number, candidate number, your surname, initials and signature. Check that you have the correct question paper. Answer ALL the questions. You must write your answer for each question in the space following the question.

### Information for Candidates

A booklet 'Mathematical Formulae and Statistical Tables' is provided. Full marks may be obtained for answers to ALL questions. The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2). There are 10 questions in this question paper. The total mark for this paper is 75. There are 28 pages in this question paper. Any blank pages are indicated.

### Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled. You should show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit.

**BLANK PAGE**

**Question 2 continued**

Ruled writing area consisting of 32 horizontal lines.

**(Total 7 marks)**

**Q2**

3. The points  $P$  and  $Q$  have coordinates  $(-1, 6)$  and  $(9, 0)$  respectively.

The line  $l$  is perpendicular to  $PQ$  and passes through the mid-point of  $PQ$ .

Find an equation for  $l$ , giving your answer in the form  $ax + by + c = 0$ , where  $a$ ,  $b$  and  $c$  are integers.

8.

**Figure 1**

Figure 1 shows a sketch of the curve  $C$  with equation  $y = f(x)$ .  
 The curve  $C$  passes through the origin and through  $(6, 0)$ .  
 The curve  $C$  has a minimum at the point  $(3, -1)$ .

On separate diagrams, sketch the curve with equation

(a)  $y = f(2x)$ , **(3)**

(b)  $y = -f(x)$ , **(3)**

(c)  $y = f(x + p)$ , where  $p$  is a constant and  $0 < p < 3$ . **(4)**

On each diagram show the coordinates of any points where the curve intersects the  $x$ -axis and of any minimum or maximum points.

**Question 8 continued**

**Q8**

**(Total 10 marks)**

9. (a) Calculate the sum of all the even numbers from 2 to 100 inclusive,

$$2 + 4 + 6 + \dots + 100$$

(3)

(b) In the arithmetic series

$$k + 2k + 3k + \dots + 100$$

$k$  is a positive integer and  $k$  is a factor of 100.

(i) Find, in terms of  $k$ , an expression for the number of terms in this series.

(ii) Show that the sum of this series is

$$50 + \frac{5000}{k}$$

(4)

(c) Find, in terms of  $k$ , the 50th term of the arithmetic sequence

$$(2k + 1), (4k + 4), (6k + 7), \dots,$$

giving your answer in its simplest form.

10. The curve  $C$  has equation

$$y = (x+1)(x+3)^2$$

(a) Sketch  $C$ , showing the coordinates of the points at which  $C$  meets the axes. (4)

(b) Show that  $\frac{dy}{dx} = 3x^2 + 14x + 15$ . (3)

The point  $A$ , with  $x$ -coordinate  $-5$ , lies on  $C$ .

(c) Find the equation of the tangent to  $C$  at  $A$ , giving your answer in the form  $y = mx + c$ , where  $m$  and  $c$  are constants. (4)

Another point  $B$  also lies on  $C$ . The tangents to  $C$  at  $A$  and  $B$  are parallel.

(d) Find the  $x$ -coordinate of  $B$ . (3)
