

6.

**Figure 1**

Figure 1 shows a sketch of the curve with equation  $y = f(x)$ . The curve crosses the  $x$ -axis at the points  $(1, 0)$  and  $(4, 0)$ . The maximum point on the curve is  $(2, 5)$ .

In separate diagrams sketch the curves with the following equations.

On each diagram show clearly the coordinates of the maximum point and of each point at which the curve crosses the  $x$ -axis.

(a)  $y = 2f(x)$ , **(3)**

(b)  $y = f(-x)$ . **(3)**

The maximum point on the curve with equation  $y = f(x + a)$  is on the  $y$ -axis.

(c) Write down the value of the constant  $a$ . **(1)**

10. The curve  $C$  has equation

$$y = (x+3)(x-1)^2.$$

- (a) Sketch  $C$  showing clearly the coordinates of the points where the curve meets the coordinate axes. (4)

- (b) Show that the equation of  $C$  can be written in the form

$$y = x^3 + x^2 - 5x + k,$$

where  $k$  is a positive integer, and state the value of  $k$ . (2)

There are two points on  $C$  where the gradient of the tangent to  $C$  is equal to 3.

- (c) Find the  $x$ -coordinates of these two points. (6)
