Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world’s leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We’ve been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

• All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.

• Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.

• Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.

• There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.

• All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.

• Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.

• Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
1. The total number of marks for the paper is 75.

2. The Edexcel Mathematics mark schemes use the following types of marks:
   - **M** marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
   - **A** marks: accuracy marks can only be awarded if the relevant method (M) marks have been earned.
   - **B** marks are unconditional accuracy marks (independent of M marks)
   - Marks should not be subdivided.

3. Abbreviations

   These are some of the traditional marking abbreviations that will appear in the mark schemes:
   - bod – benefit of doubt
   - ft – follow through
   - the symbol \( \checkmark \) will be used for correct ft
   - cao – correct answer only
   - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
   - isw – ignore subsequent working
   - awrt – answers which round to
   - SC: special case
   - oe – or equivalent (and appropriate)
   - dep – dependent
   - indep – independent
   - dp decimal places
   - sf significant figures
   - \( \star \) The answer is printed on the paper
   - \[ \square \] The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

6. If a candidate makes more than one attempt at any question:
   - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
   - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

7. Ignore wrong working or incorrect statements following a correct answer.

8. In some instances, the mark distributions (e.g. M1, B1 and A1) printed on the candidate’s response may differ from the final mark scheme.

| 2. (a)          | $d =$ Jan - June: -2, 1, -3, 2, -2, 3, 2, 2  
$d = 0.375, \sum d^2 = 39 \Rightarrow s^2 = 5.4107... \text{ or } s = 2.326...$  
$t_\gamma(0.025) = 2.365$  
Confidence Interval: $0.375 \pm 2.365 \frac{2.326...}{\sqrt{8}} = (-1.57, 2.32)$ (o.e.) | M1, M1, B1 |
| (b)             | $H_0: \mu_D = 0 \quad H_1: \mu_D \neq 0$  
Comment that 0 is in the interval  
Not sig, no evidence of a change in **mean time to assemble component** | B1, M1, A1 (7) |

**Notes**

| (a)             | 1$^{st}$ M1 for attempting differences  
2$^{nd}$ M1 for attempting $\overline{d}$  
3$^{rd}$ M1 for attempting $s_d^2$, correct expression with their $\sum d^2$ and $\overline{d}$ or correct calculation (to 2 sf or better)  
4$^{th}$ M1 for use of a correct CI formula, using a value for $t$ and ft their values.  
1$^{st}$ A1 for lower limit of -1.57 or -2.32  
2$^{nd}$ A1 for corresponding upper limit | S.C. Allow A1A1 for (0, 2.32) |
| (b)             | B1 for both hypotheses using $\mu_D$  
M1 for a comment about 0 being in (or out) of their interval  
A1 contextual conclusion – must include assemble components | S.C. If they have used difference in means test in part (a) to get the confidence interval then award the B1 for $H_0: \mu_x - \mu_y = 0 \quad H_1: \mu_x - \mu_y \neq 0$ or the correct hypotheses. |

<td>B1</td>
</tr>
<tr>
<td><strong>(f)</strong></td>
<td>$\text{Var}(M) &lt; \text{Var}(Y)$, so $M$ is the better estimator of $a$</td>
<td>M1, A1</td>
</tr>
<tr>
<td><strong>(g)</strong></td>
<td>Maximum value = 5</td>
<td>B1ft</td>
</tr>
</tbody>
</table>

**Notes**

- **(a)** M1 for use of formula or integration or symmetry to find $E(\bar{X})$
- **(c)** 1st B1 for use of formula for variance
  2nd B1 for use of $\frac{\sigma^2}{n}$ formula
  M1 for $k^2 \text{Var}(\bar{X})$ and ft their $k$
- **(d)** 1st M1 for attempt at correct integration of correct expression
  1st A1 for correct integration
  2nd M1d dependent on previous M, for attempting to use correct limits
  2nd A1 need statement that $M$ is therefore unbiased
- **(f)** M1 for comparison of their $\text{Var}(Y)$ and their $\text{Var}(M)$
- **(g)** B1ft for calculation of their estimate based on their choice in (f).
  If they choose $Y$ answer is 4 (or twice their $k$)
5. (a) \( Y = \text{no. of organisms in 20 ml. } Y \sim \text{Po}(2\lambda) \)  
Size = \( P(Y \geq 4 \mid Y \sim \text{Po}(2)) = 1 - P(Y \leq 3) = 1 - 0.8571 = 0.1429 \)  
\( \) \( \) \( \text{M1, A1} \) (2)

(b) \( P(\text{Type II error}) = 1 - P(Y \geq 4 \mid Y \sim \text{Po}(5)) = P(Y \leq 3) = 0.2650 \)  
\( \) \( \) \( \text{M1, A1} \) (2)

(c) \( X = \text{no. of organisms in 10 ml. } X \sim \text{Po}(\lambda) \)  
Power = \( P(X \geq 2) + P(X=1) \times P(X \geq 2) \)  
= \( P(X \geq 2) [1 + P(X = 1)] = [1 - e^{-\lambda}(1 + \lambda)] \times [1 + \lambda e^{-\lambda}] \)  
= \( 1 - e^{-\lambda} - \lambda e^{-\lambda} + \lambda e^{-\lambda} - \lambda(1 + \lambda) e^{-2\lambda} = 1 - e^{-\lambda} - \lambda(1 + \lambda) e^{-2\lambda} \)  
\( \) \( \) \( \) \( \) \( \text{M1A1} \) (4)

(d) \( r = 0.92 \)  
\( \) \( \) \( \text{B1} \) (1)

</thead>
<tbody>
<tr>
<td>(f)</td>
<td>Expected time for statistician’s test: ( 30 \times P(X = 1) + 15 \times [1 - P(X = 1)] )</td>
<td>M1</td>
</tr>
</tbody>
</table>

![Graph showing relationship between Power and λ]
\[= 30\lambda e^{-\lambda} + 15(1 - \lambda e^{-\lambda}) = 15(1 + \lambda e^{-\lambda})\]

slower if: \(15(1 + \lambda e^{-\lambda}) > 20\), \(\Rightarrow \lambda e^{-\lambda} > \frac{1}{3}\)

\(\lambda e^{-\lambda}\) with \(\lambda = 1\) is 0.36..., with \(\lambda = 2\) is 0.27...so second (statisticians) test is slower if \(\lambda = 1\) but faster for \(\lambda = 2\). Second test is more powerful for all \(\lambda\).

Choose second test - more powerful and faster for \(\lambda \geq 2\)
