**Instructions to Candidates**

In the boxes above, write your centre number, candidate number, your surname, initials and signature. Check that you have the correct question paper. Answer ALL the questions. You must write your answer for each question in the space following the question. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

**Information for Candidates**

A booklet 'Mathematical Formulae and Statistical Tables' is provided. Full marks may be obtained for answers to ALL questions. The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2). There are 9 questions in this question paper. The total mark for this paper is 75. There are 32 pages in this question paper. Any blank pages are indicated.

**Advice to Candidates**

You must ensure that your answers to parts of questions are clearly labelled. You should show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit.

3. The curve  $C$  has equation  $x = 8y \tan 2y$

The point  $P$  has coordinates  $\left(\pi, \frac{\pi}{8}\right)$

(a) Verify that  $P$  lies on  $C$ . **(1)**

(b) Find the equation of the tangent to  $C$  at  $P$  in the form  $ay = x + b$ , where the constants  $a$  and  $b$  are to be found in terms of  $\pi$ . **(7)**

**Question 3 continued**

Lined writing area for the answer to Question 3.

**Q3**

**(Total 8 marks)**

4.

**Figure 1**

Figure 1 shows part of the graph with equation  $y = f(x)$ ,  $x \in \mathbb{R}$ .

The graph consists of two line segments that meet at the point  $Q(6, -1)$ .

The graph crosses the  $y$ -axis at the point  $P(0, 11)$ .

Sketch, on separate diagrams, the graphs of

(a)  $y = |f(x)|$  **(2)**

(b)  $y = 2f(-x) + 3$  **(3)**

On each diagram, show the coordinates of the points corresponding to  $P$  and  $Q$ .

Given that  $f(x) = a|x - b| - 1$ , where  $a$  and  $b$  are constants,

(c) state the value of  $a$  and the value of  $b$ . **(2)**

Q5  

--	--

6.

**Figure 2**

Figure 2 shows a sketch of part of the curve with equation

$$y = 2 \cos\left(\frac{1}{2}x^2\right) + x^3 - 3x - 2$$

The curve crosses the  $x$ -axis at the point  $Q$  and has a minimum turning point at  $R$ .

(a) Show that the  $x$  coordinate of  $Q$  lies between 2.1 and 2.2 (2)

(b) Show that the  $x$  coordinate of  $R$  is a solution of the equation

$$x = \sqrt{1 + \frac{2}{3}x \sin\left(\frac{1}{2}x^2\right)}$$

(4)

Using the iterative formula

$$x_{n+1} = \sqrt{1 + \frac{2}{3}x_n \sin\left(\frac{1}{2}x_n^2\right)}, \quad x_0 = 1.3$$

(c) find the values of  $x_1$  and  $x_2$  to 3 decimal places. (2)

---

---

---

---

---

---

---

---

---

---

---

7. (a) Show that

$$\operatorname{cosec} 2x + \cot 2x = \cot x, \quad x \neq 90n^\circ, \quad n \in \mathbb{Z} \quad (5)$$

(b) Hence, or otherwise, solve, for  $0 \leq \theta < 180^\circ$ ,

$$\operatorname{cosec} (4\theta + 10^\circ) + \cot (4\theta + 10^\circ) = \sqrt{3}$$

You must show your working.

*(Solutions based entirely on graphical or numerical methods are not acceptable.)* (5)

Question 8 continued

Handwriting practice lines for the response to Question 8.

9. (a) Express  $2 \sin \theta - 4 \cos \theta$  in the form  $R \sin(\theta - \alpha)$ , where  $R$  and  $\alpha$  are constants,  $R > 0$  and  $0 < \alpha < \frac{\pi}{2}$

Give the value of  $\alpha$  to 3 decimal places.

(3)

$$H(\theta) = 4 + 5(2 \sin 3\theta - 4 \cos 3\theta)^2$$

Find

- (b) (i) the maximum value of  $H(\theta)$ ,  
(ii) the smallest value of  $\theta$ , for  $0 \leq \theta < \pi$ , at which this maximum value occurs.

(3)

Find

- (c) (i) the minimum value of  $H(\theta)$ ,  
(ii) the largest value of  $\theta$ , for  $0 \leq \theta < \pi$ , at which this minimum value occurs.
