

Biology B

Advanced

PAPER 2: Advanced Physiology, Evolution and Ecology

Total Marks
-------------

Time: 1 hour 45 minutes

In the boxes below, write your name, centre number and candidate number.

Surname					
Other names					
Centre Number					
Candidate Number					

**YOU MUST HAVE**

**Scientific calculator, writing and drawing equipment, ruler**

**YOU WILL BE GIVEN**

**Diagram Booklet**

**INSTRUCTIONS**

**Answer ALL questions.**

**Answer the questions in the spaces provided – there may be more space than you need.**

**You may use a scientific calculator.**

**INFORMATION**

**The total mark for this paper is 90.**

**The marks for EACH question are shown in brackets – use this as a guide as to how much time to spend on each question.**

**In question(s) marked with an ASTERISK (\*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.**

**ADVICE**

**Read each question carefully before you start to answer it.**

**Try to answer every question.**

**Check your answers if you have time at the end.**

---

**Answer ALL questions. Write your answers in the spaces provided.**

**Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.**

**1 Look at the diagram for Question 1(a) in the Diagram Booklet. It shows DNA replication.**

**(a) Which of the following is the name of the bond labelled X on the diagram?  
(1 mark)**

- ☐ **A ester**
- ☐ **B glycosidic**
- ☐ **C hydrogen**
- ☐ **D phosphodiester**

**(continued on the next page)**

**1 continued.**

**(b) Describe the roles of three named enzymes involved in DNA replication.  
(3 marks)**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**Turn over**

**1 continued.**

---

---

**(c) A section of double-stranded DNA has a total number of 10 000 nucleotides.**

**Adenine makes up 35% of the nucleotides in this section of double-stranded DNA.**

**Calculate the total number of cytosine nucleotides found in this section of DNA.**

**(2 marks)**

**Answer \_\_\_\_\_**

**(Total for Question 1 = 6 marks)**

---

**Turn over**

**2 Plant growth substances and phytochromes are chemicals that affect the growth of plants.**

- (a) (i) Which row of the table shows the concentrations required for the fastest growth of lateral buds?  
(1 mark)**

	<b>Auxin concentration</b>	<b>Cytokinin concentration</b>
<input type="checkbox"/> <b>A</b>	high	high
<input type="checkbox"/> <b>B</b>	high	low
<input type="checkbox"/> <b>C</b>	low	high
<input type="checkbox"/> <b>D</b>	low	low

**(continued on the next page)**

**2 continued.**

- (ii) Some types of auxin affect the activity of cells in the same way as hormones such as oestrogen affect human cells.**

**These auxins pass through the cell membrane and affect the synthesis of enzymes.**

**Explain how these auxins affect the synthesis of enzymes.**

**(3 marks)**

---

---

---

---

---

---

---

---

---

---

**2 continued.**

---

---

---

---

---

**(continued on the next page)**

**2 continued.**

**(b) Phytochrome is involved in the germination of seeds.**

**The effect of red (R) light and far-red (FR) light on the germination of lettuce seeds was investigated.**

**A scientist exposed five groups of 50 seeds to red light for one minute.**

**The seeds were planted and the mean number that germinated was calculated.**

**Another five groups each of 50 seeds were then exposed to red light for one minute, followed by far-red light for four minutes.**

**These seeds were planted and the mean number that germinated was calculated.**

**The experiment was repeated with different combinations of red light and far-red light.**

**Look at the table for Question 2(b) in the Diagram Booklet. The results are shown in the table.**

**(continued on the next page)**

**2 continued.**

**Analyse the data to comment on the effect of red (R) and far-red (FR) light on the germination of lettuce seeds.**

**(4 marks)**

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

**2 continued.**

---

---

---

---

---

---

**(Total for Question 2 = 8 marks)**

---

**3 Look at the diagram for Question 3(a) in the Diagram Booklet. It shows the structure of an animal cell.**

**(a) (i) Which of the following is the name of the structure labelled Q?  
(1 mark)**

- ☐ **A centriole**
- ☐ **B nucleus**
- ☐ **C rough endoplasmic reticulum**
- ☐ **D smooth endoplasmic reticulum**

**(ii) These cells were cultured in radioactively-labelled amino acids.**

**In which sequence would the cell structures in the diagram become radioactive during protein synthesis?**

**(1 mark)**

- ☐ **A Q S R**
- ☐ **B S P R**
- ☐ **C P R Q**
- ☐ **D P S R**

**3 continued.**

**(iii) Explain one function of lysosomes.  
(2 marks)**

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**3 continued.**

**(b) Look at the diagram for Question 3(b) in the Diagram Booklet. It shows the development of a zygote into a blastocyst.**

**Look at the graph for Question 3(b) in the Diagram Booklet. It shows how the ratio of the volume of the nucleus to the volume of the cytoplasm of each embryonic cell changes as the blastocyst develops.**

**(continued on the next page)**

**3 continued.**

- (i) The ratio shown in the graph can be calculated using the formula**

$$\text{ratio} = \frac{\text{volume of nucleus}}{\text{total volume of cell} - \text{volume of nucleus}}$$

**On day 2, the volume of the cell nucleus was  $900 \mu\text{m}^3$ .**

**Calculate the total volume of this cell on day 2.**

**Give your answer to two significant figures.  
(3 marks)**

**Answer \_\_\_\_\_  $\mu\text{m}^3$**

**(continued on the next page)**

**Turn over**

**3 continued.**

- (ii) Comment on the changes in the ratios as the zygote develops into a blastocyst.  
(3 marks)**

---

---

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**Turn over**

**3 continued.**

---

---

---

**(Total for Question 3 = 10 marks)**

---

**4 The autonomic nervous system controls the heart rate.**

**(a) Look at the diagram for Question 4(a)(i) in the Diagram Booklet. It shows a human brain.**

**(i) Which region of the brain controls the heart rate?  
(1 mark)**

☐ **A W**

☐ **B X**

☐ **C Y**

☐ **D Z**

**(continued on the next page)**

**4 continued.**

**(ii) Which one of the following would lead to an increase in heart rate?**

**(1 mark)**

- ☐ **A release of acetylcholine by the sympathetic nervous system**
- ☐ **B release of acetylcholine by the parasympathetic nervous system**
- ☐ **C release of noradrenaline by the sympathetic nervous system**
- ☐ **D release of noradrenaline by the parasympathetic nervous system**

**(b) Look at the graphs for Question 4(b) in the Diagram Booklet. The graphs show the pressure changes that occur in a healthy heart and the pressure changes that occur in a heart with an atrioventricular valve that leaks.**

**(continued on the next page)**

**4 continued.**

- (i) An atrioventricular valve in the healthy heart has a surface area of  $3.5 \text{ cm}^2$ .**

**Determine the force that is applied to this atrioventricular valve when it closes.**

**(3 marks)**

**Use the formula**

$$\text{Pressure in kPa} = \frac{\text{Force in newtons}}{\text{Area in m}^2}$$

**Answer \_\_\_\_\_ newtons**

**4 continued.**

- (ii) Explain why people with an atrioventricular valve that leaks find exercise difficult.  
(4 marks)**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**Turn over**

**4 continued.**

---

---

---

---

---

---

---

---

---

**(Total for Question 4 = 9 marks)**

---

**5 Look at the diagram for Question 5(a) in the Diagram Booklet. It shows a section of a human retina.**

**(a) Which of the following is the name of the cell labelled X?  
(1 mark)**

- ☐ **A bipolar neurone**
- ☐ **B ganglion neurone**
- ☐ **C motor neurone**
- ☐ **D optic neurone**

**(b) Explain the role of rhodopsin in the generation of a nerve impulse in cell X when light falls on the retina.  
(3 marks)**

---

---

---

---

**(continued on the next page)**

**Turn over**

**5 continued.**

---

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**5 continued.**

- \* (c) A scientist investigated the effect of how the length of time a volunteer spent in darkness affected the sensitivity of their retina to light.**

**This is the method used:**

- the volunteer sat in a room illuminated with white light for twenty minutes**
- the lights were switched off and the room was placed into total darkness for one minute**
- an LED emitting light of wavelength 500 nm at low light intensity was switched on**
- the light intensity was gradually increased until the volunteer was able to see the LED and this minimum light intensity was recorded**
- this was repeated with increasing lengths of time that the volunteer was kept in total darkness**
- the investigation was then repeated with an LED that emitted red light with a wavelength of 620 nm.**

**(continued on the next page)**

**5 continued.**

**Look at the graph for Question 5(c) in the Diagram Booklet. It shows the results of this investigation.**

**Look at the graph for Question 5(c) in the Diagram Booklet. It shows the relative sensitivity of rods and three types of cone to light of different wavelengths.**

**Analyse the graphs to explain the results of this investigation.  
(6 marks)**

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**Turn over**

---

---

---

---

---

---

---

---

**(Total for Question 5 = 10 marks)**

---

**6 Look at the diagram for Question 6(a) in the Diagram Booklet. It shows a nephron.**

**(a) Which labelled parts of this nephron would normally contain glucose?  
(1 mark)**

☐ **A W only**

☐ **B W and X**

☐ **C W, X, and Y**

☐ **D W, X, Y, and Z**

**(b) Oedema is an accumulation of tissue fluid. This is due to less tissue fluid being returned to the blood capillaries.**

**(i) Explain how tissue fluid is returned to capillaries.  
(3 marks)**

---

---

---

**(continued on the next page)**

**Turn over**

**6 continued.**

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

**(continued on the next page)**

**Turn over**

**6 continued.**

- (ii) Furosemides are drugs that are used to reduce oedema. They are diuretics that increase urine production.**

**Furosemides reduce the active transport of sodium ions by the loop of Henle.**

**Explain how furosemides cause an increase in urine production.**

**(4 marks)**

---

---

---

---

---

---

---

---

---

---

**6 continued.**

---

---

---

---

---

---

---

---

---

---

**(Total for Question 6 = 8 marks)**

---

**7 Tawny owls live in areas close to the Arctic Circle.**

**Scientists investigated the feather colours of a population of tawny owls. Feather colours of the owls were scored on a scale of 1 to 11, according to how grey or brown they were.**

**Grey feathered owls were given a score between 6 and 1, with 1 being the most grey.**

**Brown feathered owls were given a score between 7 and 11, with 11 being the most brown.**

**Look at the graph for Question 7 in the Diagram Booklet. It shows the percentages of owls in the population with each of the colour scores.**

**(continued on the next page)**

**7 continued.**

**(a) The scientists concluded that feather colour in owls is controlled by a single genetic locus. The brown allele is dominant to the grey allele.**

**(i) State what is meant by a dominant allele.  
(1 mark)**

---

---

---

---

---

**(continued on the next page)**

**7 continued.**

- (ii) Explain the range of feather colours, shown in the graph, in this population of owls.  
(2 marks)**

---

---

---

---

---

---

---

---

---

---

- (iii) In this population of 120 owls, 84 of them were grey.**

**On page 37 calculate the number of owls that are heterozygous for feather colour.  
(3 marks)**

**7 continued.**

**Use the Hardy-Weinberg equation**

$$p^2 + 2pq + q^2 = 1$$

**Answer** \_\_\_\_\_

**(continued on the next page)**

**Turn over**

**7 continued.**

- \*(b) The scientists investigated the effect of climate change on the frequencies of these two alleles for feather colour in populations of tawny owls.**

**The percentage survival rates of both colours of owl were measured when there were different depths of snow.**

**The mean depth of snow was recorded each year between 1980 and 2007.**

**The percentage of owls that were coloured brown between 1960 and 2007 was also recorded.**

**Look at the graphs for Question 7(b) in the Diagram Booklet. The graphs show the results.**

**The scientists concluded that increased greenhouse gases from human activity are resulting in an increase in the frequency of the brown allele.**

**Analyse the data to evaluate this conclusion.  
(6 marks)**

---

---

**(continued on the next page)**

**Turn over**

**7 continued.**

**(Total for Question 7 = 12 marks)**

**Turn over**

- 8 A group of scientists are studying a glacier. As the glacier gradually melts, it leaves behind bare rock.**

**Scientists sampled the soil from areas that had been uncovered for different lengths of time after the glacier ice had melted.**

**Look at the table for Question 8 in the Diagram Booklet. It shows the results from the samples.**

- (a) Which of the following should be used to determine if there is an association between length of time since the glacial ice has melted and soil depth?**

**(1 mark)**

- ☐ **A chi squared**
- ☐ **B correlation coefficient**
- ☐ **C standard deviation**
- ☐ **D t-test**

**(continued on the next page)**

**8 continued.**

- (b) Explain how succession brings about the changes in the soil during this period of time.  
(5 marks)**

---

---

---

---

---

---

**(continued on the next page)**

**8 continued.**

- (c) The roots of some of the plants growing around the glacier were found to contain an oxygen binding protein called leghaemoglobin.**

**Look at the graph for Question 8(c) in the Diagram Booklet. It shows the oxygen dissociation curve for leghaemoglobin and the oxygen dissociation for haemoglobin.**

- (i) Leghaemoglobin is a protein that is similar in structure to myoglobin. Both of these proteins have one subunit.**

**Explain how the oxygen dissociation curve shows that the structure of leghaemoglobin is more similar to myoglobin than to haemoglobin.**

**(3 marks)**

---

---

---

---

---

**8 continued.**

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**8 continued.**

- (ii) Explain how leghaemoglobin enables these plants to grow in waterlogged and compact soils.  
(3 marks)**

---

**(Total for Question 8 = 12 marks)**

---

- 9 In Kenya, an in-situ conservation project has been set up to make paper from elephant dung.

This project aims to help conserve elephant populations, conserve biodiversity and help local communities.

- (a) Paper is produced from cellulose molecules present in elephant dung.

Look at the diagram for Question 9(a) in the Diagram Booklet. It shows part of a cellulose molecule.

- (i) Which of the following is the name of the monomer labelled X on the diagram?  
(1 mark)

☐ A  $\alpha$  glucose

☐ B  $\beta$  glucose

☐ C  $\alpha$  ribose

☐ D  $\beta$  ribose

(continued on the next page)

**9 continued.**

- (ii) Draw one of the products of the hydrolysis of this part of the cellulose molecule.  
(2 marks)**

**(continued on the next page)**

**9 continued.**

- (iii) Explain how the structure of cellulose is adapted for its function in plant cell walls.  
(3 marks)**

---

**9 continued.**

---

---

**(continued on the next page)**

**9 continued.**

- (b) Elephant conservation often involves the setting up of protected areas to stop poaching. Local people are banned from entering these areas.**

**This method of elephant conservation sometimes causes conflict with local people, as elephants can trample and eat crops in nearby farmland. Farmers sometimes burn areas of grassland and forest to stop elephants destroying their farmland.**

**The new paper conservation project encourages local people to make paper from elephant dung they collect from the conservation area. The paper they make is sold at a high price.**

**Look at the table for Question 9(b) in the Diagram Booklet. Conservationists measured the effect of the new paper project on the index of diversity of the area over two years. They also measured the effect of a protected conservation area where local people were banned from entering on the index of diversity. The results are shown in the table.**

**(continued on the next page)**

**9 continued.**

- (i) State why calculating an index of diversity is a better measure of biodiversity than counting the number of different species.  
(1 mark)**

---

---

---

**(continued on the next page)**

**9 continued.**

- (ii) Give two advantages of in-situ conservation of elephants compared with ex-situ conservation of elephants.  
(2 marks)**

---

---

---

---

---

---

---

---

---

---

**(continued on the next page)**

**9 continued.**

**(iii) Explain the effect of the new paper project on biodiversity compared with the protected area where local people were banned.  
(4 marks)**

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

**9 continued.**

---

---

---

---

---

**(continued on the next page)**

**9 continued.**

- (c) Describe the limitations of CITES in the conservation of organisms such as elephants. (2 marks)**

---

---

---

---

---

---

---

---

---

---

**(Total for Question 9 = 15 marks)**

---

---

**TOTAL FOR PAPER = 90 MARKS**  
**END OF PAPER**
