Question 7(a)

Question 7(b)

Question 7(c)

Mechanism of resistance	Example of antibiotic	How bacteria develop resistance to antibiotic	Example of resistant bacteria
Destruction of the antibiotic	penicillin	Produces enzymes that destroy the drug	Staphylococcus
Decrease in antibiotic uptake	vancomycin	Changes in the permeability of the cell membrane prevent the drug entering the bacterial cell	Pseudomonas
Activation of a transport mechanism	tetracycline	Pumps develop in the cell membrane to remove toxic substances from the cell	Escherichia coli
Modification of target site	linezolid	Mutations in the bacterial DNA causes a change in the target site so the antibiotic can no longer bind to it	Escherichia coli

Question 8

The black and white photograph shows a dense patch of long, thin seagrass.

Question 9(a)

The image shows a chicken with no comb on its head or wattle on its neck. A few feathers are sticking up along its forehead area. It has a short beak with large nostrils.
