Question 1

Extract A

Swedish labour market 'tougher than ever'

The labour market in Sweden is under more pressure than any of the other countries included in a new global report and the situation is deteriorating each year. The Hays
5 Global Skills Index is a 10–point scale where a score higher than 5 indicates that the labour market is under pressure. This year Sweden scored 7·0 out of 10, compared to last year's score of 6·8

10 One of the key issues is a 'skills mismatch', meaning that while there are jobs available in Sweden and job–seekers, there is a shortage of people with the skills the labour market demands.

15 “Companies in the high–skilled industries are struggling to find the right talent and thus wages in these niche industries are peaking,” Johan Alsen, Managing Director for Hays Sweden, explained in the report. He said that the upwards trend was expected to continue, at least in the short term, due to the lack of changes made to the Swedish education system which could tackle the skills shortage.

(continued on the next page)

Extract A continued.

20 He also said, “At the same time, other parts of the
Swedish labour market are becoming more fragmented as
unemployment amongst the lower skilled remains at rather
high levels. Wages are decreasing in these sectors as
politicians aim to create more jobs for the less–skilled
25 workforce.” Vacancies in Sweden rose by **29%** in the past
year, the third largest rise of the countries included in the
study.

Sweden’s extremely high score of **9·8** in the ‘skills
mismatch’ category shows how hard it can be for
30 employers to find the right people for the job. It scored
a **10·0** for ‘wage pressure in high–skilled industries’,
meaning that in skilled sectors such as IT, it has led to a
speedy rise in wages, in turn increasing the gap between
wages in high–skilled and lower–skilled industries.

35 Sweden has been widely criticised over the past year
for strict regulations on work permits for employees
outside the EU. Hundreds of non–EU workers with jobs in
Sweden, many of them working in the technology sector,
have been ordered to leave the country over minor
40 administration errors in their paperwork.

Question 1

Extract B

American factories could prosper if they find enough skilled workers

A widening skills gap means that over half of new manufacturing jobs in the decade to **2025** may go unfilled.

- 5** A huge problem is that factories are struggling to find enough skilled workers. The Manufacturing Institute, an industry body, calculates that there will be nearly **3·5** million manufacturing job openings in America in the decade to **2025**, but that **2** million may not be filled.
- 10** Much is being done to address a national shortage of skills. A coalition of research institutes, manufacturers and federal agencies launched the National Network for Manufacturing Innovation in **2014**. This public–private partnership aims to speed up the development and
- 15** adoption of such advanced techniques as 3D–printing and digital manufacturing, and to help train workers in these areas. Continued technological progress will keep manufacturing employment from returning to past levels. However, if firms can find enough skilled workers to use
- 20** the machines, the sector’s output could really take off.

Extract C

The Global Competitiveness Index 2017–2018

Covering 137 economies, the Global Competitiveness Index 2017–2018 measures national competitiveness – defined as the set of institutions, policies and factors that determine the level of productivity.

Figure 1

Current ranking	Economy	Score	Previous ranking
1	Switzerland	5·86	1
2	United States	5·85	3
3	Singapore	5·71	2

Percentage unemployment in Sweden's counties as of January 2017

Figure 5

(Source adapted from: <https://www.thelocal.se/20170213/this-map-shows-where-youre-most-likely-to-be-unemployed-in-sweden>)

Question 1

Extract E – Information**Percentage unemployment in Sweden's counties as of January 2017**

Where you live in Sweden can have a significant impact on your likelihood of being unemployed. While the unemployment rate for Sweden as a whole dropped to 7·8% in January 2017 compared to 8% the previous year, the statistics show that the rate varies between Sweden's 21 counties.

University city Uppsala and its surrounding county has the lowest unemployment rate in Sweden at 5·9%. A short drive north to Gävleborg sees the rate hit 11·4% – the highest in Sweden. Similarly, Stockholm is the county with the second lowest unemployment rate at 6%, but a short drive west to Södermanland sees the rate shoot up to the second highest in Sweden, 11%

Question 2

Extract F

Adidas's high-tech factory brings production back to Germany

- Behind closed doors in the German town of Ansbach a new factory is taking shape. It will use robots and novel production techniques such as 3D printing. What is unique about this factory is that it will not be making cars, aircraft or electronics but trainers and other sports shoes – an \$80 billion-a-year industry that has been offshored largely to China, Indonesia and Vietnam.
- 10 The Speedfactory, as the Ansbach plant is called, belongs to **Adidas**, a giant German sports goods firm. Production began in mid-**2017**, slowly at first and then increasing up to **500,000** pairs of trainers a year. **Adidas** is constructing a second Speedfactory near Atlanta for the
- 15 American market. If all goes well, more Speedfactories will be opened in Germany and other countries.

- Currently, trainers are made mostly by hand in giant factories in Asia, using division of labour, with people assembling components or shaping, bonding and sewing materials. Rising prosperity in many Asian countries means the cost of manual work outsourced to the region is rising. Labour shortages may become a problem.
- 20

(continued on the next page)

Extract F continued.

Adidas's motivation for its Speedfactories, however, goes well beyond labour costs. People want fashionable shoes immediately, but the supply chain struggles to keep up. From the first sketch of a completely new pair of trainers to seeing the finished goods in the shops can take as long as 18 months. An order to replenish an existing design can take two or three months unless shoes travel by aircraft at a huge cost rather than in a shipping container.

The Speedfactory's main strength is to shorten the supply chain, and so the time taken to get the products to shops is less than a week, perhaps even to a day, once the trainer design is complete.

Adidas claims its new production system is extremely fast and highly flexible. Instead of ordering components that will be assembled into a new pair of trainers, the Speedfactory will instead make most of the parts itself from raw materials, such as plastics, fibres and other basic substances. The machines carrying out this work will be highly automated and use processes such as computerised knitting, robotic cutting and 3D printing.

Question 2

Extract G

Adidas leads the way as four companies win the 'Stop Slavery' Award

Adidas was revealed as the overall winner of the second Thomson Reuters Foundation Stop Slavery Award, which
5 celebrates businesses that excel in efforts to identify, investigate and root out forced labour from their supply chains.

Global fashion retailer **C&A**, US technology company **Intel** and British mutually-owned retail and services group
10 **The Co-operative Group** were the other winners of the annual award designed by Turner Prize winning sculptor **Anish Kapoor**.

With modern slavery increasingly dominating headlines worldwide, businesses are under increasing pressure from
15 both governments and consumers to reveal what actions they are taking to ensure their supply chains are free from slavery.

About **25** million people globally were estimated to be trapped in forced labour in **2016**, according to the
20 International Labor Organization (ILO) and the human rights group, Walk Free Foundation.

(continued on the next page)

Extract G continued.

Adidas, the world's second-biggest sportswear firm, was praised for its transparent audits, strong responsible sourcing guidelines, and robust tools to trace higher-risk
25 supply chains. The sportswear giant was one of the world's first companies to create a role dedicated to fighting slavery, and uses technology to encourage workers to speak out about any abuses.

Intel, the world's largest computer chipmaker, was
30 awarded for its innovation. The company has openly discussed its anti-slavery efforts, and refused new business with several suppliers who have failed to implement measures to combat forced labour.

Question 2

Extract H**Intel to move part of production from Malaysia to Vietnam**

5 US-based chipmaker **Intel Corporation** will relocate a part of its production facility in Malaysia to Vietnam and China in an effort to cut labour costs. The relocation of the **Intel** plant in Kulim, Malaysia to facilities in Vietnam's Ho Chi Minh City and China's Chengdu will result in the layoff of **600** Malaysian workers at the plant.

10 Many technology corporations like **Samsung, LG, and Microsoft** have also been moving production bases to Vietnam due to its cheap labour and the strategic location of the country as a gateway to the Southeast Asian region.
