Pearson Edexcel GCE in Health &
Social Care (6947/01)

Unit 10: Using and Understanding
Research

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Report for Publication Unit 10 (6947/01)

June 2016

General Introduction

The assessment evidence required for this unit consists of a report on a research project carried out by the learner. Most learners had chosen an appropriate topic that was related to health and social care, and had attempted to address all the assessment requirements of the unit. A range of topics had been chosen that covered all four user-groups/settings. Section 10.1 of the unit specifications, 'The aims and use of research in health and social care', should help learners to understand the sort of topics and approaches that may appropriately be called health and social care research.

Assessment Objective 1

In AO1 learners need to select an appropriate topic, consider different research methods, and explain and justify the methods they have chosen to use. A range of research methods was used by learners, though most had used some form of questionnaire. There was also some use of interviews, observations, experiments, and other methods. Some learners had put an overemphasis on secondary research, at the expense of their own primary research, which is a main focus of the unit. Learners who had apparently been directed to use a particular set of methods often showed limited understanding of the advantages, disadvantages and overall rationale of each method they employed. Learners should look into a range of research methods and explain how their choice of methods makes sense in relation to characteristics of their research project. This allows them to show knowledge and understanding in their research planning.

Assessment Objective 2

In AO2 most learners had created useful research tools, and some were very well considered. Pilot questionnaires had often been used; centres are reminded though that the use of a pilot questionnaire does not, in itself, automatically qualify work for Mark Band 3 in this AO. Most learners had put considerable effort into this aspect of their work.

Assessment Objective 3

In AO3 the analysis of results was excellent in some reports with clear, well labelled, graphs, tables and charts accompanied by clear explanation. However, a number of learners had provided only a superficial analysis, or had stated and described their findings with little or no analysis offered. Learners are advised to plan their data analysis when they make decisions about the data they intend to collect and the methods to be used. This can help to ensure that the data they collect can be analysed logically and systematically in the final report.

Assessment Objective 4

The evaluations in AO4 were the weakest part of most reports. Learners who had good understanding were able to evaluate their work in a balanced way, recognising both strengths and limitations. Learners should be encouraged to consider the limitations, as well as the strengths of their research to help them develop an evaluation. Some learners had included generic, theoretical statements about the role of research in health and social care that were not linked to the rest of their research report. Learners understanding of the role of research is best demonstrated by setting their own research in the context of the broader world of research through recognition of its constraints and limitations.

Grade boundaries for this, and all other papers, can be found on the website on this link:
