Pearson Edexcel
Level 3 GCE

Further Mathematics
Advanced
Paper 3B: Further Statistics 1

Tuesday 18 June 2019 – Morning

**Time: 1 hour 30 minutes plus your
additional time allowance.**

**MATERIALS REQUIRED FOR
EXAMINATION**

**Mathematical Formulae and Statistical
Tables (Green), calculator**

**ITEMS INCLUDED WITH QUESTION
PAPERS**

Diagram Book
Answer Book

Y61180A

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for algebraic manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

INSTRUCTIONS

In the boxes on the Answer Book and on the Diagram Book, write your name, centre number and candidate number.

Answer ALL questions and ensure that your answers to parts of questions are clearly labelled.

Answer the questions in the Answer Book or on the separate diagrams – there may be more space than you need.

Do NOT write on the Question Paper.

You should show sufficient working to make your methods clear. Answers without working may not gain full credit.

Answers should be given to three significant figures unless otherwise stated.

Turn over

INFORMATION

A booklet ‘Mathematical Formulae and Statistical Tables’ is provided.

There are 7 questions in this question paper.

The total mark for this paper is 75

The marks for EACH question are shown in brackets – use this as a guide as to how much time to spend on each question.

ADVICE

Read each question carefully before you start to answer it.

Try to answer every question.

Check your answers if you have time at the end.

Answer ALL questions.

**Write your answers in the
Answer Book provided or on the
diagrams.**

- 1. A chocolate manufacturer places special tokens in 2% of the bars it produces so that each bar contains at most one token.**

Anyone who collects 3 of these tokens can claim a prize.

Andreia buys a box of 40 bars of the chocolate.

- (a) Find the probability that Andreia can claim a prize.**

(2 marks)

(continued on the next page)

Turn over

1. continued.

Barney intends to buy bars of the chocolate, one at a time, until he can claim a prize.

(b) Find the probability that Barney can claim a prize when he buys his 40th bar of chocolate.

(3 marks)

(c) Find the expected number of bars that Barney must buy to claim a prize.

(1 mark)

(Total for Question 1 is 6 marks)

Turn over

- 2. Indre works on reception in an office and deals with all the telephone calls that arrive.**

Calls arrive randomly and, in a 4 – hour morning shift, there are on average 80 calls.

- (a) Using a suitable model, find the probability of more than 4 calls arriving in a particular 20 – minute period one morning.
(3 marks)**

(continued on the next page)

Turn over

2. continued.

Indre is allowed 20 minutes of break time during each 4 – hour morning shift, which she can take in 5 – minute periods.

When she takes a break, a machine records details of any call in the office that Indre has missed.

One morning Indre took her break time in 4 periods of 5 minutes each.

(b) Find the probability that in exactly 3 of these periods there were no calls.

(2 marks)

(continued on the next page)

Turn over

2. continued.

**On another occasion Indre took
1 break of 5 minutes and 1 break of
15 minutes.**

**(c) Find the probability that Indre
missed exactly 1 call in each of
these 2 breaks.**

(3 marks)

(Total for Question 2 is 8 marks)

Turn over

- 3. Refer to the table for Question 3 in the Diagram Book.**

A biased spinner can land on the numbers 1, 2, 3, 4 or 5 with the probabilities shown in the Diagram Book.

The spinner will be spun 80 times and the mean of the numbers it lands on will be calculated.

Find an estimate of the probability that this mean will be greater than 3.25

(Total for Question 3 is 6 marks)

Turn over

- 4. Refer to the tables for Question 4 in the Diagram Book.**

Liam and Simone are studying the distribution of oak trees in some woodland.

They divided the woodland into 80 equal squares and recorded the number of oak trees in each square. The results are summarised in Table 1

(continued on the next page)

Turn over

4. continued.

Liam believes that the oak trees were deliberately planted, with 6 oak trees per square and that a constant proportion p of the oak trees survived.

(a) Suggest the model Liam should use to describe the number of oak trees per square.

(2 marks)

(continued on the next page)

Turn over

4. continued.

Liam decides to test whether or not his model is suitable and calculates the expected frequencies given in Table 2

(b) Showing your working clearly, complete the test using a 5% level of significance. You should state your critical value and conclusion clearly. (7 marks)

(continued on the next page)

Turn over

4. continued.

Simone believes that a Poisson distribution could be used to model the number of oak trees per square. She calculates the expected frequencies given in Table 3

(c) Find the value of S and the value of t , giving your answers to 2 decimal places.

(4 marks)

(d) Write down hypotheses to test the suitability of Simone's model.

(1 mark)

(continued on the next page)

Turn over

4. continued.

**The test statistic for this test is
8.749**

(e) Complete the test.

**Use a 5% level of significance
and state your critical value and
conclusion clearly.**

(3 marks)

**(f) Using the results of these tests,
explain whether the origin of
this woodland is likely to be
cultivated or wild.**

(2 marks)

(Total for Question 4 is 19 marks)

Turn over

- 5. Information was collected about accidents on the Seapron bypass. It was found that the number of accidents per month could be modelled by a Poisson distribution with mean 2.5**

Following some work on the bypass, the numbers of accidents during a series of 3 – month periods were recorded.

The data were used to test whether or not there was a change in the mean number of accidents per month.

(continued on the next page)

Turn over

5. continued.

- (a) Stating your hypotheses clearly and using a 5% level of significance, find the critical region for this test. You should state the probability in each tail.**

(5 marks)

- (b) State $P(\text{Type I error})$ using this test.**

(1 mark)

(continued on the next page)

Turn over

5. continued.

Data from the series of 3 – month periods are recorded for 2 years.

(c) Find the probability that at least 2 of these 3 – month periods give a significant result.

(3 marks)

(continued on the next page)

Turn over

5. continued.

Given that the number of accidents per month on the bypass, after the work is completed, is actually 2.1 per month,

- (d) find $P(\text{Type II error})$ for the test in part (a)**
(3 marks)

(Total for Question 5 is 12 marks)

Turn over

6. The discrete random variable X has probability generating function

$$G_X(t) = k \ln\left(\frac{2}{2-t}\right)$$

where k is a constant.

- (a) Find the exact value of k
(1 mark)
- (b) Find the exact value of $\text{Var}(X)$
(7 marks)
- (c) Find $P(X = 3)$
(4 marks)

(Total for Question 6 is 12 marks)

Turn over

7. A spinner can land on red or blue.
When the spinner is spun, there is a probability of $\frac{1}{3}$ that it lands on blue.
The spinner is spun repeatedly.

The random variable **B** represents the number of the spin when the spinner first lands on blue.

(a) Find

(i) $P(B = 4)$

(ii) $P(B \leq 5)$

(4 marks)

(continued on the next page)

Turn over

7. continued.

(b) Find $E(B^2)$

(3 marks)

Steve invites Tamara to play a game with this spinner.

Tamara must choose a colour, either red or blue.

Steve will spin the spinner repeatedly until the spinner first lands on the colour Tamara has chosen.

The random variable X represents the number of the spin when this occurs.

(continued on the next page)

Turn over

7. continued.

**If Tamara chooses red, her score
is e^X**

**If Tamara chooses blue, her score
is X^2**

**(c) State, giving your reasons and
showing any calculations you
have made, which colour you
would recommend that Tamara
chooses.**

(5 marks)

(Total for Question 7 is 12 marks)

TOTAL FOR PAPER IS 75 MARKS

END OF PAPER
