Pearson

Higher Nationals in Computing for England: Qualification Guide

A future-focused Computing qualification with specialist pathways, expanded AI content and a focus on practical, technical and transferable skills for progression into higher education and digital careers.

FIRST TEACHING FROM SEPTEMBER 2027

HTQ approval pending

About Pearson Higher Nationals and HTQs

- Higher Nationals are practical Level 4 **(Higher National Certificate/HNC)** and Level 5 **(Higher National Diploma/ HND)** qualifications regulated by Ofqual, designed to develop the skills employers need and allow learners to go straight into work or further study.
- Higher Technical Qualifications **(HTQs)** are Level 4 and 5 qualifications that have been approved against employer-led occupational standards. This demonstrates that the qualification has been designed to develop the knowledge, skills and behaviours relevant to particular occupations.
- The new HN in Computing for England has been designed so that all nine pathways at both HNC and HND levels can achieve HTQ status, subject to Department for Education (DfE) approval.

Why has the qualification been redeveloped?

Computing is a fast-moving sector. Developments in artificial intelligence, automation, cloud technologies, data, software development, networking and cybersecurity are changing the technical skills needed by employers.

Feedback from employers, sector professionals, FE and HE providers, and students has informed the qualification content, pathway structure and the knowledge, skills and behaviours learners will develop.

The redevelopment ensures that learners continue to develop broader workplace capabilities alongside their technical knowledge. The common core at Level 4 includes Fundamentals of Computer Science, Designing a Computing Project and Professional Practice.

Building on this foundation, the common Level 5 core requires learners to complete either a Computing Research Project or an Applied Computing Project, supporting a choice of research-focused or applied learning while ensuring a consistent core curriculum across all pathways.

What's new?

Nine pathways at both Levels 4 and 5

The new structure provides the same nine named pathways at both HNC and HND levels:

1. **General**
2. **Quality Engineering**
3. **Software Engineering**
4. **Data Engineering**
5. **Data Analytics**
6. **Network Engineering**
7. **Cybersecurity**
8. **Cloud Computing**
9. **Applied Artificial Intelligence**

All nine pathways are aligned to recognised occupational standards at both HNC and HND levels. In most cases, the same occupational alignment continues across both levels.

New and expanded specialist areas

The offer includes dedicated pathways in areas that are increasingly important across the computing sector:

- **Applied Artificial Intelligence** – covering core AI, automation, digital productivity, ethics, applied AI, and generative and conversational AI.
- **Cloud Computing** – covering cloud foundations, DevOps automation, cloud networking, cloud security, data centre operations and cloud systems architecture.
- **Data Engineering** – covering database engineering, data analytics, enterprise database systems, advanced data engineering, and big data analytics and visualisation.

More AI content across the qualification

AI is embedded throughout the qualification rather than being confined to a single pathway. A broad range of AI-focused specialist and optional units cover areas such as:

- Agentic AI
- AI Programming
- Machine Learning
- Computer Vision
- Natural Language Processing
- Deep Learning

What's new?

A broader optional unit bank

Centres can select from an expanded bank of optional units that reflect current and emerging areas of the computing sector. Topics include:

- emerging technologies
- green computing and digital sustainability
- web and games development
- virtual and augmented reality
- blockchain technologies
- information security
- cloud infrastructure and cryptography
- software development
- FinOps
- work-based learning

Flexible project options at Level 5

At Level 5, learners complete one 30-credit project unit. Centres can select either:

- **Unit 501: Computing Research Project**, or
- **Unit 502: Applied Computing Project**.

This provides flexibility to support different learner destinations and programme approaches, including academic progression and applied, employment-focused learning.

First teaching

The HN in Computing for England is available for **first teaching from September 2027**.

A consistent qualification structure

The HNC comprises **120 credits**, eight 15-credit Level 4 units. The HND comprises **240 credits**, including 120 credits at Level 5. All units are worth 15 credits, while the two alternative Level 5 project units are each worth 30 credits.

The structure combines:

- common core learning
- pathway-mandatory units
- optional units

Units that are mandatory within one specialist pathway may also be available as optional units within another pathway.

HN in Computing for England
Qualification structure

Rules of combination

- Units are worth 15 credits, except Units 501 and 502, which are worth 30 credits.
- **HNC**: 120 Level 4 credits: 8 x 15-credit units.
- **HND**: 240 credits: the 120-credit HNC plus 120 Level 5 credits.
- **HND**: 6 x 15-credit units plus one 30-credit project unit.
- Specialist mandatory units from one pathway may be selected as optional units in another pathway.

KEY

Cell colour identifies the type of each unit in the pathway.

Core Mandatory | Specialist Mandatory | Optional

5

Lifelong Learning Entitlement

Launching in academic year 2026/27 for courses starting on or after 1 January 2027, the Lifelong Learning Entitlement will transform the student finance system.
