

BTEC Nationals in Applied Science - Amendments to Unit 42

Unit 42 Geology of Natural Resources

Assessment criteria P3 and P4 have been written incorrectly in the unit. They should be as follows:

- P3 identify geology and geological ~~structures~~ **features of an area** using geological maps
- P4 carry out fieldwork to enable the recording of geology and geological ~~structures~~ **features** in the field

The red font shows the correct wording and the incorrect wording has been crossed out.

Also this means that the section on assessment guidance, on page 8, needs amending to the following:

For P3, learners should identify ~~structures~~ **features of an area** from geological maps such as faults, dipping strata, horizontal **unconformities** and folds.

Pass grade learners are likely to need assistance in making the link between geology as shown on a map and what they observe in the field for P4. In the field learners should identify and record geological strata and ~~structures~~ **features** for P4.
