Edexcel, BTEC and LCCI qualifications

Edexcel, BTEC and LCCI qualifications are awarded by Pearson, the UK’s largest awarding body offering academic and vocational qualifications that are globally recognised and benchmarked. For further information, please visit our qualifications website at qualifications.pearson.com. Alternatively, you can get in touch with us using the details on our contact us page at qualifications.pearson.com/contactus

About Pearson

Pearson is the world's leading learning company, with 35,000 employees in more than 70 countries working to help people of all ages to make measurable progress in their lives through learning. We put the learner at the centre of everything we do, because wherever learning flourishes, so do people. Find out more about how we can help you and your learners at qualifications.pearson.com

Summary of Sample Assessment Material changes i
Task 1
Sample Mark Grid 15

Changes to rubrics

The rubrics in this Sample Assessment Material have been updated to provide clarity on the rules under which the task should be taken. Centres should read the Instructions for Teachers and Instructions for Learners sections carefully to understand the full detail of the changes. These changes have been summarised below for ease of reference:

Summary of Sample Assessment Material changes

<table>
<thead>
<tr>
<th>Summary of changes made between previous issues and this current issue</th>
<th>Page number</th>
</tr>
</thead>
<tbody>
<tr>
<td>7th paragraph&lt;br&gt;The paragraph on centres timetabling the supervised assessment period has been removed, as the supervised assessment time is now set by Pearson. The supervised assessment time must now be completed in a consecutive five day period in the one set task week. This is to increase the rigour of the task by ensuring all learners must take the assessment in the same timeframe.</td>
<td>Page 2</td>
</tr>
<tr>
<td>Maintaining Security&lt;br&gt;Bullets have been added to give teachers more information on how to maintain security for the task, including arrangements for supervised assessment, and for how the learners’ work must be kept securely. These bullet points have been added to clarify supervising requirements for supervised assessment time.</td>
<td>Page 3</td>
</tr>
</tbody>
</table>
Instructions

○ This booklet contains material for the completion of the set task under supervised conditions.
○ This booklet is specific to each series and this material must only be issued to learners who have been entered to undertake the task.
○ This booklet must be kept securely until the start of the 6-hour supervised assessment period.
○ This set task must be undertaken over five consecutive days during the 1 week assessment period timetabled by Pearson.

Information

○ The total mark for this paper is 68.
Instructions to Teachers/Tutors

This booklet must be given to learners in its entirety as soon as it is received. Centres must issue this booklet at the appropriate time. Electronic templates for use in activities 3, 4 and 5 will be provided for centres to download for candidate use.

Work must be completed on a computer:

- internet access is not permitted.
- the task must be completed using one of the following programming languages: a C family language or Python 3.4 or later version
- access to a data dictionary for the chosen language is permitted.

All learner work must be completed independently and authenticated by the Teacher/Tutor and/or Invigilator before being submitted to Pearson.

This assessment must be taken under supervision in a one week period set by Pearson, it can be split over a number of scheduled sessions but once started must be completed in a five consecutive day period.

Centres must make sure that all learner work is backed up securely and is kept until the end of the post-result service window.

Centres should schedule all learners at the same time or supervise cohorts to ensure there is no opportunity for collusion.

Teachers/tutors should note that:

- Learners should not be given any direct guidance or prepared materials
- Learners should not be given any support in writing or editing notes
- All work must be completed independently by the learner.

Learners must not bring anything into the supervised environment or take anything out without your approval.

Centres are responsible for putting in place appropriate checks to ensure that only permitted material is introduced into the supervised environment.
Maintaining security:

- During supervised assessment sessions, the assessment areas must only be accessible to the individual learner and to named members of staff.
- Learners can only access their work under supervision.
- Any work learners produce under supervision must be kept secure.
- Only permitted materials for the set task can be brought into the supervised environment.
- During any permitted break and at the end of the session materials must be kept securely and no items removed from the supervised environment.
- Learners are not permitted to have access to the internet or other resources during the supervised assessment period.

After the session the teacher/tutor or invigilator will confirm that all learner work had been completed independently as part of the authentication submitted to Pearson.

The set task is a formal external assessment and must be conducted with reference to the instructions in this task booklet and the Instructions for Conducting External Assessments (ICEA) document to ensure that the supervised assessment is conducted correctly and that learners submit evidence that is their own work.

Outcomes for Submission

12 documents will need to be submitted by each learner 2 for each activity – one in their chosen software format (Activity 4: activity4code: must be a .txt file) and one as a PDF:

**Activity 1:** `activity1flowchart`
**Activity 2:** `activity2pseudocode`
**Activity 3:** `activity3testlog`
**Activity 4:** `activity4code`
**Activity 4:** `activity4testlog`
**Activity 5:** `activity5evaluation`

Each learner must complete an authentication sheet.
Read the set task information carefully.

In this booklet you will be asked to carry out specific activities using the scenario.

You will be given 6 hours for producing the final outcomes.

You will complete the activities within the set task under supervision and your work will be kept securely during any breaks taken.

You must work independently throughout the supervised assessment period and should not share your work with other learners.

You may use a calculator and will have access to a computer. All activities must be completed using a computer.

Internet access is not allowed.

The task must be completed using one of the following programming languages: a C family language or Python 3.4 or later version.

You will have access to a data dictionary for your chosen programming language.

Your teacher/tutor may clarify the wording that appears in this task but cannot provide any guidance in completion of the task.

This task must be completed under supervision in timetabled sessions provided by your centre. It is likely that you will be given more than one timetabled session to complete these tasks.
**Outcomes for Submission**

You will need to submit 12 documents on completion of the supervised assessment period 2 documents for each activity - one in your chosen software format (Activity 4 must be a .txt file) and one as a PDF in folder for submission:

**Activity 1: activity1flowchart:**
**Activity 2: activity2pseudocode:**
**Activity 3: activity3testlog:**
**Activity 4: activity4code:**
**Activity 4: activity4testlog:**
**Activity 5: activity5evaluation:**

You must complete a declaration that the work you submit is your own.
You are asked to use your software design, development, testing and evaluation understanding and skills to produce a program that meets the client’s requirements.

A local gym has commissioned you as a software developer to write a program that will assess a gym member’s requirement to maintain their current weight accurately.

You need to create a program that will give a gym member information about:

- their current basal metabolic rate (BMR)
- their current body mass index (BMI)
- their target BMI
- the number of kilocalories to maintain their current weight.

You will design, implement and test your program. You will also need to justify and evaluate your decisions.

When designing and developing the solution ensure:

- it is efficient and robust
- it provides the accurate daily intake requirement for a gym member to maintain their body mass index (BMI)
- the BMR calculation is given to 2 decimal places
- the BMI calculation is given to 1 decimal place
- the kilocalorie requirement output is shown rounded to a whole number
- there is a text output to show the member’s:
  - current BMR
  - current BMI
  - target BMI.
Set Task Brief

You are asked to use your software design, development, testing and evaluation understanding and skills to produce a program that meets the client's requirements.

A local gym has commissioned you as a software developer to write a program that will assess a gym member's requirement to maintain their current weight accurately.

You need to create a program that will give a gym member information about:

- their current basal metabolic rate (BMR)
- their current body mass index (BMI)
- their target BMI
- the number of kilocalories to maintain their current weight.

You will design, implement and test your program. You will also need to justify and evaluate your decisions.

When designing and developing the solution ensure:

- it is efficient and robust
- it provides the accurate daily intake requirement for a gym member to maintain their body mass index (BMI)
- the BMR calculation is given to 2 decimal places
- the BMI calculation is given to 1 decimal place
- the kilocalorie requirement output is shown rounded to a whole number
- there is a text output to show the member's:
  - current BMR
  - current BMI
  - target BMI.

Information

You are provided with information to use when designing and developing your program:

- the revised Harris-Benedict equation used to calculate Basal Metabolic Rate
- the formula to use to give the recommended daily kilocalorie intake to maintain current weight for men and women
- the formula to calculate BMI
- the standard BMI categories
- current gym membership age, weight and height profile.
Calculating the Basal Metabolic Rate (BMR) using the revised Harris-Benedict equation

<table>
<thead>
<tr>
<th></th>
<th>BMR formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>Men</td>
<td>$88.362 + (13.397 \times \text{weight in kg}) + (4.799 \times \text{height in cm}) - (5.677 \times \text{age in years})$</td>
</tr>
<tr>
<td>Women</td>
<td>$447.593 + (9.247 \times \text{weight in kg}) + (3.098 \times \text{height in cm}) - (4.330 \times \text{age in years})$</td>
</tr>
</tbody>
</table>

Calculating the recommended daily kilocalorie intake to maintain current weight

<table>
<thead>
<tr>
<th>Individual’s level of exercise</th>
<th>Calculation of daily intake required (kilocalories)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Little to no exercise</td>
<td>BMR x 1.2</td>
</tr>
<tr>
<td>Light exercise (1–3 days per week)</td>
<td>BMR x 1.375</td>
</tr>
<tr>
<td>Moderate exercise (3–5 days per week)</td>
<td>BMR x 1.55</td>
</tr>
<tr>
<td>Heavy exercise (6–7 days per week)</td>
<td>BMR x 1.725</td>
</tr>
<tr>
<td>Very heavy exercise (twice per day, extra heavy workouts)</td>
<td>BMR x 1.9</td>
</tr>
</tbody>
</table>

Calculating BMI

$\text{BMI} = \frac{\text{Weight (kg)}}{\text{Height (m)} \times \text{Height (m)}}$

**Standard BMI categories**

- Underweight = <18.5
- Normal weight = 18.5–24.9
- Overweight = 25–29.9
- Obesity = BMI of 30 or greater.

*Ideal gym member BMI = 22.*

Current gym membership age, weight and height profile

- Membership age range: 14–100 years of age.
- Weight range: 30–250 kg.
- Height range: 120 – 210 cms.
Calculating the Basal Metabolic Rate (BMR) using the revised Harris-Benedict equation

Men BMR = 88.362 + (13.397 x weight in kg) + (4.799 x height in cm) – (5.677 x age in years)

Women BMR = 447.593 + (9.247 x weight in kg) + (3.098 x height in cm) – (4.330 x age in years)

Calculating the recommended daily kilocalorie intake to maintain current weight

<table>
<thead>
<tr>
<th>Level of Exercise</th>
<th>Daily Intake Required (kilocalories)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Little to no exercise</td>
<td>BMR x 1.2</td>
</tr>
<tr>
<td>Light exercise (1–3 days per week)</td>
<td>BMR x 1.375</td>
</tr>
<tr>
<td>Moderate exercise (3–5 days per week)</td>
<td>BMR x 1.55</td>
</tr>
<tr>
<td>Heavy exercise (6–7 days per week)</td>
<td>BMR x 1.725</td>
</tr>
<tr>
<td>Very heavy exercise (twice per day, extra heavy workouts)</td>
<td>BMR x 1.9</td>
</tr>
</tbody>
</table>

Calculating BMI

\[ \text{BMI} = \frac{\text{Weight (kg)}}{\text{Height (m)} \times \text{Height (m)}} \]

Standard BMI categories

- Underweight = <18.5
- Normal weight = 18.5–24.9
- Overweight = 25–29.9
- Obesity = BMI of 30 or greater.

Ideal gym member BMI = 22.

Current gym membership age, weight and height profile

Membership age range: 14–100 years of age.

Weight range: 30–250 kg.

Height range: 120 – 210 cms.

---

**Set Task**

You must complete ALL activities within the set task.

You are reminded that you are to produce your documents using a computer and to save your documents in your folder ready for submission using the formats and naming conventions indicated.

**Activity 1**

Produce a flow chart, using British Computing Society symbols, to plan the logic and processes for the program.

*Save your flow chart in your folder for submission as activity1flowchart:*
  - in your chosen software format
  - and
  - as a PDF.

*You are advised to spend approximately 70 minutes on this activity.*

**Total for Activity 1 = 10 marks**

**Activity 2**

Produce pseudocode that a software developer could use to create the program.

*Save your pseudocode in your folder for submission as activity2pseudocode:*
  - in your chosen software format
  - and
  - as a PDF.

*You are advised to spend approximately 70 minutes on this activity.*

**Total for Activity 2 = 10 marks**
Activity 3

Produce a test log to plan the testing of your complete program, including test data and expected result.

Show your test planning by completing the test log section of the given ‘Test log and evaluation’ document.

Save your completed Test log and evaluation document in your folder for submission as **activity3testlog**:

- in your chosen software format
- and
- as a PDF.

*You are advised to spend approximately 35 minutes on this activity.*

Total for Activity 3 = 6 marks
Activity 4

You are ready to write and test your program. Use your flowchart, pseudocode and test log to help write and test your program.

Write and test your program.

You should:

- write a program that meets the scenario requirements, in a C family or Python V3.4 or later version programming language
- test your solution to ensure that it functions as expected, recording this testing in your ‘Test Log and evaluation’ document.

Your evidence should include:

- a copy of your code containing annotations/comments
- a copy of your Test log and evaluation document.

Save your code in your folder for submission as activity4code as a:

- .text file
  - and
- PDF.

Save your Test log and evaluation document in your folder for submission as activity4log:

- in your chosen software format
  - and
- as a PDF.

You are advised to spend approximately 2 hours 20 minutes on this activity.

Total for Activity 4 = 30 marks
Activity 5

Evaluate your program solution.

You should cover:

- how well your solution meets the requirements of the scenario
- the quality and performance of your program
- the choices you made about coding conventions
- the changes you made during the development process.

Write your response in the evaluation section of your ‘Test log and evaluation’ document.

Save your Test log and evaluation document to your folder for submission as activity5evaluation:

- in your chosen software format
  
  and

- as a PDF.

You are advised to spend approximately 45 minutes on this activity.

Total for Activity 5 = 12 marks

END OF TASK

TOTAL FOR TASK = 68 MARKS
Activity 5
Evaluate your program solution.
You should cover:
- how well your solution meets the requirements of the scenario
- the quality and performance of your program
- the choices you made about coding conventions
- the changes you made during the development process.
Write your response in the evaluation section of your 'Test log and evaluation' document.
Save your Test log and evaluation document to your folder for submission as activity5evaluation:
- in your chosen software format
- as a PDF.
You are advised to spend approximately 45 minutes on this activity.
Total for Activity 5 = 12 marks
END OF TASK
TOTAL FOR TASK = 68 MARKS

Example of the documents you need to complete.
Document for Activities 3, 4 and 5

Test log and evaluation (add additional rows and extend the evaluation space as required)

</table>

Software evaluation (Activity 5 response):
Unit 4: Software Design and Development
Project - Sample marking grid

General Marking Guidance

- All learners must receive the same treatment. Examiners must mark the first learner in exactly the same way as they mark the last.
- Marking grids should be applied positively. Learners must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the marking grid not according to their perception of where the grade boundaries may lie.
- All marks on the marking grid should be used appropriately.
- All the marks on the marking grid are designed to be awarded. Examiners should always award full marks if deserved. Examiners should also be prepared to award zero marks if the learner’s response is not rewardable according to the marking grid.
- Where judgment is required, a marking grid will provide the principles by which marks will be awarded.
- When examiners are in doubt regarding the application of the marking grid to a learner’s response, a senior examiner should be consulted.

Specific Marking guidance

The marking grids have been designed to assess learner work holistically. Rows within the grids identify the assessment focus/outcome being targeted. When using a marking grid, the ‘best fit’ approach should be used.

- Examiners should first make a holistic judgement on which band most closely matches the learner response and place it within that band. Learners will be placed in the band that best describes their answer.
- The mark awarded within the band will be decided based on the quality of the answer in response to the assessment focus/outcome and will be modified according to how securely all bullet points are displayed at that band.
- Marks will be awarded towards the top or bottom of that band depending on how they have evidenced each of the descriptor bullet points.
