

Unit 7: IT Support

Unit code:	F/601/3277
QCF Level 2:	BTEC Specialist
Credit value:	10
Guided learning hours:	60

Aim and purpose

This unit will make learners aware of problems IT users experience on a daily basis and enable them to provide support to resolve common IT problems.

Unit introduction

Computers are relied upon more and more in workplaces as well as by home users and the consequences of not solving problems quickly can be significant. This means that individuals who supply technical advice and guidance to keep the organisation running and people using the technologies effectively are key employees. The importance of these roles has increased because of the rapid pace of change in the technologies and this often means that the nature of the support changes to one of supporting people developing new skills in addition to as supporting them because of failures of the actual technology.

Learners will gain experience in capturing user problems and requests into structured systems that meet these needs, including mechanisms to escalate problems, when appropriate. They will also be able to identify trends which may indicate underlying issues and develop this into proposing possible solutions.

The unit builds on learners' existing knowledge of IT, perhaps gained through other units. It covers both how

IT support systems operate and the work of individuals who provide technical advice. It is recommended that this unit be delivered early in the programme, as it helps learners understand the workings of IT support systems before practising practical IT support skills.

Learning outcomes and assessment criteria

In order to pass this unit, the evidence that the learner presents for assessment needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

On completion of this unit a learner should:

Learning outcomes	Assessment criteria
1 Know the common issues IT users may experience	1.1 describe the common issues IT users may experience 1.2 identify the benefits of having a helpdesk facility
2 Be able to record user support requests	2.1 record information about end-user request following defined procedures
3 Be able to provide IT support	3.1 use different sources of information to communicate about specified errors 3.2 respond to multiple user support requests
4 Understand the importance of trends in IT support requests	4.1 identify trends in problems reported by users 4.2 explain the importance of trends in IT support requests

Unit content

1 Know the common issues IT users may experience

Common requests: issues eg forgotten login details, device issues, drive mappings, internet connectivity, email, lost files; hardware eg replacements, upgrades; software eg upgrades, new software; services eg intranet access, internet access; permissions; remote access

Support: levels eg first, second, third-line support

Benefits: advantages eg staff confidence, efficiency

IT helpdesk: types eg online, phone support, services offered; advantages; disadvantages

2 Be able to record user support requests

Types of problems: errors eg hardware faults, installing software, reconfiguring software, network issues; supplying consumables; advice on software applications eg use of spellchecker, saving files

User interaction: methods of recording user problems eg software forms, email, verbal reports, error messages, diagnostic reports;

3 Be able to provide IT support

Communicating information: good practice eg being supportive, dealing with stressed individuals, being calm; providing progress reports; verbal feedback; written feedback; escalation of problem eg irregular requests, outside responsibility; archiving requests and responses eg use of computerised databases

Advice and guidance: basic functions eg of hardware, software, networking features; maintenance procedures eg cleaning CD/DVD readers, printer head cleaner utilities, running diagnostic software; troubleshooting advice eg replacing broken equipment, running testing applications, identification of an upgrade/replacement needed

Procedures: recording end-user requests; fault-finding; record problems eg time constraints; use sources of information eg reference manuals, specifications, frequently asked questions, websites; fault resolution flowcharts

4 Understand the importance of trends in IT support requests

Trends: types eg commonly occurring problems, problems reported by users

Effect of technology: developments eg function, capacity; new ways of working; impact on users eg stress, new opportunities; increased support need

Essential guidance for tutors

Delivery

This unit will prepare learners for working in a support role. It is focused on advice and guidance rather than on the identification and fixing of faults. It would suit learners who wish to progression into a helpdesk type role rather than that of a traditional technician.

Access to work experience opportunities will be preferred by many learners and will give a context and reality that will add value. However, simulations can also be designed which have the benefits of consistency and facilitating assessment. Visits to helpdesks or talks by helpdesk operators will be valuable.

It will be necessary to define for learners some aspects of the working environment that they will need to operate within. This environment may include:

- easy access to manuals, specifications or other sources of information
- clearly defined procedures for documenting requests and advice given possibly using simple flowcharts or other structure diagrams. These procedures should include points where problems may be resolved and where outstanding matters are escalated to a higher level
- rules for escalation of difficult problems or problems outside the scope of the learners' defined role.

In addition, job descriptions could be provided and tailored to suit individuals in such things as the areas of expertise that they are able to respond to and guidelines for escalation. Learners do not need in-depth skills in the areas that they deal with.

Steady building of learners' confidence and smooth running of the programme will be facilitated by good preparation of scenarios and related materials so that learners are not discouraged early by a lack of source information that relate to the requests they are presented with.

With 2.1-4.1, learners will need a range of tasks to complete during class time in what may be considered a 'realistic working environment', for the purpose of definition, multiple in the context of 3.2 implies that learners must have addressed at least three requests.

Outline learning plan

The outline learning plan has been included in this unit as guidance and can be used in conjunction with the programme of suggested assignments. The outline learning plan demonstrates one way in planning the delivery and assessment of this unit.

Topic and suggested assignments/activities and/assessment
Introduction to the unit
<p>Identifying advice and guidance which may be required by IT users:</p> <ul style="list-style-type: none"> • whole-class exercise – tutor presentation on how to explain hardware, followed by individual exercise • whole-class exercise – tutor presentation on how to explain software, followed by individual exercise • whole-class exercise – tutor presentation on benefits of providing advice and guidance to users • individual exercise – learners look at the features of an IT helpdesk.
Individual exercise - learners practise helpdesk procedures.
Assignment 1 - Helping the User
<p>Providing advice and guidance:</p> <ul style="list-style-type: none"> • whole-class exercise – tutor presentation on communicating information to a range of users, followed by • individual exercise • pairs exercise – interacting with the user • individual exercise – learners identify different types of problem.
Assignment 2 - Supporting the User
<ul style="list-style-type: none"> • Identifying trends in user support requests: • whole-class exercise – tutor presentation on types of trends, followed by individual exercise • individual exercise – learners look at the effects of advances in technology.
Assignment 3 - Review Support

Assessment

It is suggested that this unit is assessed using three assignments as summarised in the *Programme of suggested assignments* table.

To achieve a pass grade, learners must achieve all of the pass criteria listed in the assessment and grading criteria grid.

For 1.1, a written report or a presentation with supporting notes (such as speakers' notes) would be an appropriate form of evidence. Work should be based on a visit to a helpdesk facility or talk given by an external visitor. Care should be taken to direct learners to include examples of all types of advice and guidance as indicated in the unit content.

For 1.2, learners must identify at least two benefits to the individual and two benefits to the organisation of having a helpdesk facility. A written report based on a case study provided by the tutor would be an appropriate form of evidence.

For 2.1, it is required that enough requests need to be recorded to be confident that learners appreciate and become comfortable with the process. At least 10 would be appropriate and they should cover the areas indicated in the unit content for 1.1. Learners will need the procedures detailing for them but they do not need to design the data capture forms or databases. The recording can be made using either a paper-based or computer system. Evidence could be in the form of completed paper-based forms or an appropriate report printed out from a computerised system.

For 3.1, learners will benefit by being presented with a wide variety of sources of information and these could be listed for learners and include paper based manuals or specifications, web-based, CD ROM, flowcharts and databases. The evidence provided for 2.1 could be used as an appropriate source of information.

Evidence for 3.1 could be a written report or an oral or electronic presentation.

3.2 is entirely observation based and can be managed a checksheet or witness statement through.

For 4.1, learners could be given sufficient simulated records or be asked to identify trends in the records documented in 2.1. Evidence for 4.1 could be a written report or a presentation.

4.2 follows on from 4.1 and requires learners to explain the importance of trends which could be those identified in 4.1. Evidence for 4.2 could be a written report or a presentation.

Programme of suggested assignments

The table below shows a programme of suggested assignments that cover the assessment criteria in the assessment and grading grid. This is for guidance and it is recommended that centres either write their own assignments or adapt any Edexcel assignments to meet local needs and resources.

Criteria covered	Assignment title	Scenario	Assessment method
1.1, 1.2	Helping the User	Manage an inter-departmental helpdesk and support helpdesk requests. Report on how it went.	Observation. Presentation.
2.1, 3.1, 3.2	Supporting the User	Participate in the management and support of multiple users (at least three).	Standardised documents and tutor observation. Presentation.
4.1, 4.2	Review Support	Using data you have gathered and other information supplied to you, carry out trend identification data analysis.	Report or presentation using a spreadsheet or chart-based application.

Links to National Occupational Standards, other BTEC units, other BTEC qualifications and other relevant units and qualifications

This unit forms part of the BTEC in IT sector suite. This unit has particular links with:

Level 1	Level 2	Level 3
	IT Fault Diagnosis and Remedy	IT Technical Support

This unit maps to some of the underpinning knowledge from the following areas of competence in the Level 2 National Occupational Standards for IT (ProCom):

7.2 IT/Technology Service Helpdesk and Incident Management.

Essential resources

Learners will need access to practical resources and suitable technology, they can also use simulators or multimedia tools to gain prior experience before handling 'live resources'.

Employer engagement and vocational contexts

The use of vocational context is essential in the delivery and assessment of this unit. Learners will require access to computer equipment to enable them to gain a practical awareness and enable them to apply their knowledge and understanding in a practical situation.

There is a range of organisations that may be able help centres to engage and involve local employers in the delivery of this unit, for example:

- Learning and Skills Network – www.vocationallearning.org.uk
- Local, regional business links – www.businesslink.gov.uk
- National Education and Business Partnership Network – www.nebpn.org
- Network for Science, Technology, Engineering and Maths Network Ambassadors Scheme – www.stemnet.org.uk
- Work-based learning guidance – www.aimhighersw.ac.uk/wbl.htm
- Work experience/workplace learning frameworks – Centre for Education and Industry (CEI University of Warwick) – www.warwick.ac.uk/wie/cei

Indicative reading for learners

Functional Skills – Level 2

Skill	When learners are ...
ICT - Using ICT	
Plan solutions to complex tasks by analysing the necessary stages	respond to multiple user problems
manage information storage to enable efficient retrieval	record information about end-user requests following defined procedures
ICT - Finding and selecting information	
use appropriate search techniques to locate and select relevant information	identify trends in problems reported by users
select information from a variety of sources to meet requirements of a complex task	use different sources of information to communicate about specified types of problems
ICT - Developing, presenting and communicating information	
enter, develop and refine information using appropriate software to meet requirements of a complex task	use different sources of information to communicate about specified types of problems
combine and present information in ways that are fit for purpose and audience	use different sources of information to communicate about specified types of problems.
