Functional Skills Maths | Entry 3 | Numberless Problem-Solving Worksheet 2

1. Grace sends a lot of text messages in January.

In February, she sends less messages.

How would you work out the difference in the number of text messages?

2. Lewis has to finish a college project in a set number of days.

He works 7 days a week on the project.

How can you work out how many weeks and days he has left to finish the project.

3. Jacob books a climbing activity for him and his friends.

He knows how many people in total will go.

The people are put into teams.

There are set number of people in each team.

Any people left over are in a small group.

How can you work out how many teams there are and how many people are in the small group?

4. Mason is going to the theatre.

They will save a set amount each month to pay for the trip.

They will save for a set number of months.

How can you work out how much they will save?

5. Abi is putting books on shelves in her shop.

She knows how many books she has and how many books will fit on each shelf.

How can you work out how many shelves she will fill and how many books will be left over?

6. Skye has some boxes of breakfast cereal.

Skye thinks there is more cereal in the two small boxes than in one large box.

How can you work out if this is true?
