EXAM PREP

I impressed in making the images in black and white, however, I decided not to continue and turn the back to their original colors.

I thought that looking away from the subject put a lot of character into the photo. It took away a lot of contrast in the images and didn’t make the image stand out as much as it could. I also feel that it made my work look very clean and crisp, which is good because it expressed all the different tones and contrasts of the image.

Once I was a firm idea, the images took a lot harder. I have a computer that allows me to see how much contrast there is in and out reflection has the chance to stand out.

Fully emerging competent ability
Fully emerging competent ability
Fully emerging competent ability
Mostly emerging competent ability

Comments:
• There is evidence that knowledge, understanding and skills are generally adequate, but safe.
• The development process shows endeavour, but a predictability in the formulation of ideas and the context in which they were formed.
• The candidate shows evidence of refining their ideas using a broadening range of techniques and processes appropriate to their personal intentions.
• There is evidence of a growing control of the formal elements through photographic experimentation.
• Annotation of ideas is relevant to intentions and the work of others.
• The candidate’s personal response shows mostly emerging competence in their understanding of visual language.
