***Understanding notional component grade boundaries**

Notional grade performance at component level plays no part in the determination of a qualification grade. Component-level grade boundaries in these linear qualifications are notional only, and do not equate to a certificated grade. When the subject grade boundaries are recommended by the senior examiners, it helps them to consider the component performance for a candidate who will achieve, say, a borderline grade A by producing a borderline grade A performance on each component. For teachers, the notional component grade boundaries can be useful as an indicator of grade performance when, for example, an examination paper is used as a future mock examination.
