Pearson Edexcel  
Level 1/Level 2 GCSE (9–1)

Geography B  
Paper 2: UK Geographical Issues

Wednesday 5 June 2019 – Afternoon

Diagram Book

In the boxes below, write your name, centre number and candidate number.

Surname					
Other names					
Centre Number					
Candidate Number					

## INSTRUCTIONS

There may be spare copies of some diagrams in case you need them.

**THIS DIAGRAM BOOK MUST BE RETURNED WITH THE QUESTION PAPER AT THE END OF THE EXAMINATION.**

↑
- A geological map of the British Isles (Great Britain and Ireland) showing the distribution of different rock types. The map uses a color-coded system: purple for metamorphic rocks, yellow and blue for igneous rocks, and white for other rocks. A scale bar in the top left indicates a distance of 100 km, and a north arrow points upwards. The map shows a high concentration of metamorphic rocks in the Scottish Highlands and parts of Wales and Ireland. Igneous rocks are scattered throughout, with notable concentrations in the Scottish Highlands, the Lake District, and various parts of Ireland. Other rocks (likely sedimentary) cover the majority of the lowland areas in England, Wales, and Ireland. The map also shows the coastlines of the British Isles and the surrounding seas.
