

(b) Explain **two** strengths of Mattéo's study.

(4)

- 1 One strength is that ~~Mattéo~~ Mattéo used a control group allowing him to be able to compare the two results and see the difference the training programme made. This makes the study ~~reliable~~ ^{valid} as we can clearly see and understand the results.
- 2 Another strength is that he did the training programme ~~for 12 weeks~~ ^{using standardised procedures by using the same 12 faces each} in order to emphasise the difference ~~with make and show at the end~~ ^{it} using standardised procedures by using the same 12 faces. This makes the study reliable as the results are ^{more accurate.}
