• Use BLACK ink or ball-point pen.
• Answer ALL questions.
• Answer the questions in the spaces provided – there may be more space than you need.

MATERIALS REQUIRED FOR EXAMINATION
Calculator, ruler

ITEMS INCLUDED WITH QUESTION PAPERS
Nil

INFORMATION FOR CANDIDATES
• The total mark for this paper is 60.
• The marks for EACH question are shown in brackets – use this as a guide as to how much time to spend on each question.
• Questions labelled with an ASTERISK (*) are ones where the quality of your written communication will be assessed – you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.

ADVICE TO CANDIDATES
• Read each question carefully before you start to answer it.
• Keep an eye on the time.
• Try to answer every question.
• Check your answers if you have time at the end.
Answer ALL questions.

Some questions must be answered with a cross in a box ☑. If you change your mind about an answer, put a line through the box ☑ and then mark your new answer with a cross ☑.

PROTEINS

1 Proteins are made up of amino acids.

   (a) The table shows the DNA bases that code for some of the amino acids found in proteins.

<table>
<thead>
<tr>
<th>DNA bases</th>
<th>AAA</th>
<th>AAC</th>
<th>CAA</th>
<th>TAC</th>
<th>TTC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amino acid</td>
<td>phe</td>
<td>leu</td>
<td>val</td>
<td>met</td>
<td>lys</td>
</tr>
</tbody>
</table>

Part of the DNA coding for a protein is:

\[
\text{T\ A\ C\ C\ A\ A\ T\ T\ C}
\]

(i) State the order of amino acids coded for by this sequence of DNA. (1 mark)
(ii) These amino acids will be joined together during protein synthesis.

During which stage of protein synthesis will this take place? (1 mark)

_________________________________________________________

(iii) Complete the sentence by putting a cross ☒ in the box next to your answer. (1 mark)

Amino acids are joined together

☐ A at the membrane

☐ B in the mitochondria

☐ C in the nucleus

☐ D at the ribosome

(Question continues on next page)
(b) DNA can code for the amino acids in the active site of an enzyme.

Explain the role of the active site of an enzyme. (2 marks)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(Question continues on next page)
(c) Mutations can occur in DNA.

Describe what effect a mutation could have on the action of an enzyme. (3 marks)
CELLS

2 Yeasts are microorganisms that are used in the brewing and baking industries.

The diagram shows a yeast cell.

(Question continues on next page)
(a) (i) State TWO ways in which the structure of this yeast cell differs from the structure of a bacterial cell. (2 marks)

1 ______________________________________________________
   ______________________________________________________
   ______________________________________________________

   ______________________________________________________

2 ______________________________________________________
   ______________________________________________________
   ______________________________________________________

   ______________________________________________________

(ii) Plant cells can produce glucose.

Suggest why yeast cells cannot produce glucose. (1 mark)

   ______________________________________________________
   ______________________________________________________
   ______________________________________________________

   ______________________________________________________

(Question continues on next page)
(b) The table shows the number of different components found in the blood of a healthy person and the blood of two other people.

<table>
<thead>
<tr>
<th>COMPONENT OF BLOOD</th>
<th>HEALTHY PERSON</th>
<th>PERSON A</th>
<th>PERSON B</th>
</tr>
</thead>
<tbody>
<tr>
<td>red blood cells</td>
<td>$5 \times 10^{12}$</td>
<td>$6 \times 10^{12}$</td>
<td>$3 \times 10^{12}$</td>
</tr>
<tr>
<td>white blood cells</td>
<td>$7 \times 10^{9}$</td>
<td>$5 \times 10^{10}$</td>
<td>$8 \times 10^{10}$</td>
</tr>
<tr>
<td>platelets</td>
<td>$3 \times 10^{11}$</td>
<td>$3 \times 10^{11}$</td>
<td>$3 \times 10^{11}$</td>
</tr>
</tbody>
</table>

(i) Calculate the difference in the number of white blood cells per dm$^3$ of blood between the healthy person and person A. (2 marks)

answer = __________________________
(ii) Describe the functions of white blood cells.  
(2 marks)

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

(iii) Person B has a low number of red blood cells compared to the healthy person.

Suggest an effect this may have on person B.  
(1 mark)

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

(TOTAL FOR QUESTION 2 = 8 MARKS)
The diagrams show the limbs of six organisms.

frog
bat
whale
cat
lizard
human
(a) Many scientists believe that these six organisms evolved from one common ancestor.

Describe the evidence shown in the diagrams that supports this belief. (3 marks)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(Question continues on next page)
(b) Fossils can provide evidence for evolution.

Explain why the fossil record is incomplete. (2 marks)

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

(Question continues on next page)
(c) The graph suggests that the level of oxygen in the atmosphere was important for the evolution of many living organisms.

Percentage of oxygen in atmosphere (%)

<table>
<thead>
<tr>
<th>Percentage of Oxygen (%)</th>
<th>Billions of Years Before Present Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>0·001</td>
<td>5</td>
</tr>
<tr>
<td>0·01</td>
<td>4</td>
</tr>
<tr>
<td>0·1</td>
<td>3</td>
</tr>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>10</td>
<td>1</td>
</tr>
<tr>
<td>100</td>
<td>0</td>
</tr>
</tbody>
</table>

First cells, photosynthetic organisms, land plants, land animals.
(i) How much oxygen was needed in the atmosphere for the evolution of land animals?

Put a cross ☑ in the box next to your answer. (1 mark)

☐ A 0.009%
☐ B 0.09%
☐ C 0.9%
☐ D 9.0%

(ii) Suggest how photosynthesis could have changed the gas content of the atmosphere. (2 marks)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

(Question continues on next page) (Turn over)
(iii) Suggest why such a high percentage of oxygen in the atmosphere was needed for large land animals to evolve. (2 marks)

(TOTAL FOR QUESTION 3 = 10 MARKS)

(Questions continue on next page)
SEXUAL REPRODUCTION IN CORAL

4 Corals are animals that live on the sea bed.

The photograph shows some species of coral.

(a) Corals can reproduce sexually, releasing sperm cells into the water.

The mass of DNA in one sperm cell from a species of coral is 0·5 picogram.

(i) Suggest the mass of DNA that would be present in an unfertilised egg cell of the same species. (1 mark)
(ii) Complete the sentence by putting a cross \( \checkmark \) in the box next to your answer. (1 mark)

The term used to describe the number of chromosomes in an egg or sperm cell is

- [ ] A diploid
- [ ] B gamete
- [ ] C haploid
- [ ] D zygote

(Question continues on next page)
(iii) Complete the sentence by putting a cross ☑ in the box next to your answer. (1 mark)

The base pairs in DNA are

☐ A thymine with adenine, cytosine with guanine

☐ B thymine with guanine, adenine with cytosine

☐ C uracil with adenine, guanine with cytosine

☐ D uracil with thymine, guanine with cytosine

(iv) Name the bond that joins the base pairs together. (1 mark)

(Question continues on next page)
(b) After fertilisation, mitosis takes place to form an embryo.

The embryo develops into new coral.

(i) Describe mitosis. (3 marks)

_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________

(Question continues on next page)
(ii) Describe how the embryo develops into new coral. (3 marks)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(TOTAL FOR QUESTION 4 = 10 MARKS)

(Questions continue on next page)
USING VISKING TUBING

5 Visking tubing is made of a plastic material through which small molecules can pass.

The diagram shows how the equipment for an investigation using visking tubing was set up.

(Question continues on next page)
(a) In this investigation, the concentration of glucose in the distilled water was measured at the start and then every five minutes.

The results are shown in the table.

<table>
<thead>
<tr>
<th>TIME OF MEASURING THE GLUCOSE CONCENTRATION IN THE DISTILLED WATER / mins</th>
<th>CONCENTRATION OF GLUCOSE IN THE DISTILLED WATER / g cm(^{-3})</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0·00</td>
</tr>
<tr>
<td>5</td>
<td>0·07</td>
</tr>
<tr>
<td>10</td>
<td>0·39</td>
</tr>
<tr>
<td>15</td>
<td>0·52</td>
</tr>
<tr>
<td>20</td>
<td>0·79</td>
</tr>
<tr>
<td>25</td>
<td>0·79</td>
</tr>
</tbody>
</table>

(Question continues on next page)
(i) Describe the results of this investigation.
(2 marks)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(Question continues on next page)
(ii) Explain the results of this investigation.
(3 marks)

(Continue your answer on next page)
(b) Complete the sentence by putting a cross $\checkmark$ in the box next to your answer. (1 mark)

The function of the gall bladder is to

- A make bile
- B make lipase
- C store bile
- D store lipase

(TOTAL FOR QUESTION 5 = 12 MARKS)

(Questions continue on next page)
WATER TRANSPORT

6 The diagram shows three duckweed plants in a beaker of distilled water.
(a) (i) Explain how the water moves into these plants. (3 marks)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(Question continues on next page)
(ii) Salt was added to the water in the beaker to form a salt solution.

Explain how the salt solution would affect the movement of water into and out of the plant.
(2 marks)

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________

(Question continues on next page)
(iii) Complete the sentence by putting a cross ☒ in the box next to your answer. (1 mark)

When the concentration of mineral ions in the soil is greater than in the root hair cell, mineral ions are transported into the root hair cells by

☐ A diffusion

☐ B osmosis

☐ C respiration

☐ D transpiration

(Question continues on next page)
*(b) Explain how water, glucose and mineral salts are transported through a plant. (6 marks)
