Combined Science	e	♦								
PAPER 5										
		Higher Tier								
Vou must have										
You must have: Calculator, ruler		Total Marks								

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must show all your working out with your answer clearly identified at the end of your solution.

Information

- The total mark for this paper is 60.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- There is a periodic table on the back cover of the paper.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ▶

Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box \boxtimes . If you change your mind about an answer, put a line through the box \boxtimes and then mark your new answer with a cross \boxtimes .

A student used the apparatus shown in Figure 1 to investigate the reaction between marble chips and dilute hydrochloric acid.

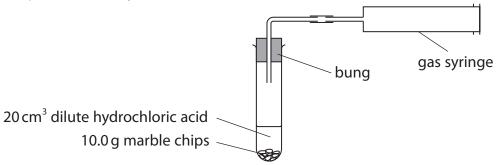

Figure 1

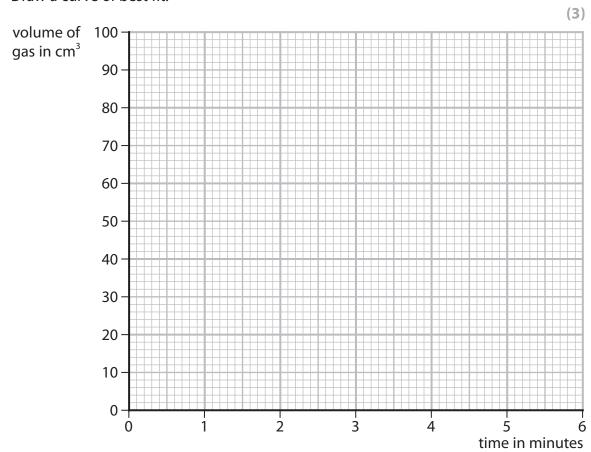

The student recorded the volume of gas every minute as shown in Figure 2.

time in minutes	0	1	2	3	4	5	6	
volume of gas in cm ³	0	52	78	91	97	100	100	

Figure 2

(a) On the grid, plot the results shown in Figure 2.

Draw a curve of best fit.

(b) Rate of reaction can be calculated using

rate of reaction =
$$\frac{\text{volume of gas produced in 1 minute}}{\text{1 minute}}$$

Figure 3 shows the rates of reaction calculated from the results of this experiment.

The rate of reaction for the time interval 2 to 3 minutes is missing.

time interval	0 to 1 minute	1 to 2 minutes	2 to 3 minutes	3 to 4 minutes	4 to 5 minutes		
rate of reaction in cm³ min ⁻¹	52	26		6	3		

Figure 3

(i) Calculate the rate of reaction for the time interval 2 to 3 minutes.

(1)

(ii) State and explain what happens to the rate of reaction as the acid reacts with the marble chips in this experiment.

(3)

(c) The student repeated the experiment using the same volume of acid and the same mass of marble chips but used smaller marble chips.

All other conditions remained the same.

The student found that the reaction with the smaller marble chips was faster to start with but produced the same volume of gas.

Using this information, draw a line on the grid to show the results for the reaction with the smaller marble chips.

Label this line 'C'.

(2)

(Total for Question 1 = 9 marks)

2 Figure 4 shows some information about the group 1 metals.

group 1 metal	atomic number	relative atomic mass				
lithium	3	7				
sodium	11	23				
potassium	19	39				
rubidium	37	85				
caesium	55	133				

Figure 4

(a) Explain, in terms of their electronic configurations, why these metals are placed in group 1 of the periodic table.

(2)

(b) Which row shows two correct properties of group 1 metals?

(1)

- ⊠ A
- ⊠ B
- ⊠ C
- \boxtimes D

properties of group 1 metals										
compounds are white in color	ur high density									
low melting points	compounds are blue in colour									
soft enough to be cut by a kni	fe low melting points									
high density	conduct electricity									

(c) The word equation for the reaction of potassium with bromine is	
potassium + bromine → potassium bromide	
Add the missing state symbol and balance the equation for this reaction.	(2)
K(K(g) \rightarrow KBr(s)	
(d) A sample of potassium contains three isotopes, potassium-39, potassium-40 and potassium-41.	
(i) Explain the meaning of the term isotopes .	(2)
(ii) This sample of potassium contains	
93.25% potassium-39	
0.02% potassium-40	
6.73% potassium-41	
Calculate the relative atomic mass of this sample of potassium.	(2)
relative atomic mass =	
(Total for Question 2 = 9 ma	

(1)

3 (a) Figure 5 shows the percentage of three gases, **X**, **Y** and **Z**, in the Earth's early atmosphere.

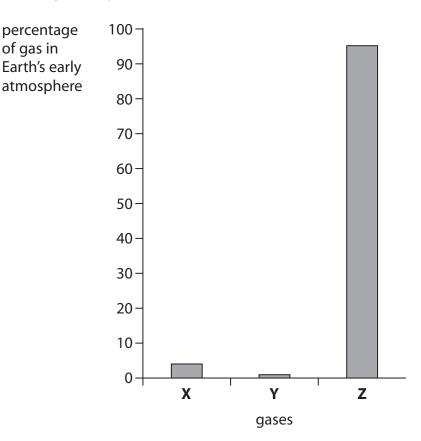

Figure 5

What is the name of gas **Z**?

- A argon
- **B** carbon dioxide
- **D** oxygen

(b)	It is thought that small quantities of hydrogen sulfide, H_2S , were also in the Earth's early atmosphere.	
	Draw the dot and cross diagram for a molecule of hydrogen sulfide.	
	Show outer electrons only.	(0)
		(2)
(c)	Acid rain is caused by some pollutant gases present in the atmosphere.	
	Explain how impurities in fossil fuels can result in acid rain.	(3)

(d) A student investigates the effect of acid rain on cress plants.

The student uses this method.

- step 1 grow 20 cress plants in each of two dishes, A and B
- **step 2** water the cress plants in dish **A** with 10 cm³ of dilute hydrochloric acid with a pH of 2
- step 3 water the cress plants in dish B with 10 cm³ of pure water with a pH of 7
- **step 4** repeat steps 2 and 3 every day for one week
- **step 5** count how many plants are still alive after one week.
- (i) State what piece of equipment the student could use to measure the pH of each liquid.

(1)

(ii) Explain **one** improvement that the student could make to the method to make the results more valid.

(2)

(Total for Question 3 = 9 marks)

BLANK PAGE

4 Chlorine gas can be prepared by reacting concentrated hydrochloric acid with solid potassium manganate(VII).

Figure 6 shows the apparatus used.

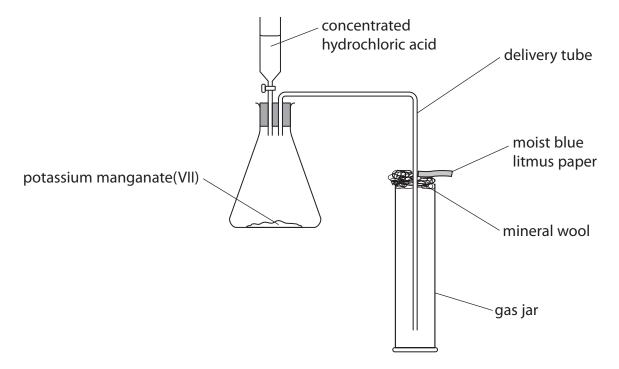

Figure 6

(a) Figure 7 shows the hazard symbols for concentrated hydrochloric acid, potassium manganate(VII) and chlorine gas.

substance	hazard symbol
concentrated hydrochloric acid	
potassium manganate(VII)	
chlorine gas	

Figure 7

Use the information in Figure 7 to help you answer (a)(i) and (a)(ii).

(i) What a	are the hazards associated with potassium manganate(VII)?	(4)								
	flammable, harmful and corrosive	(1)								
⋈ B	flammable, toxic and hazardous to the environment									
	oxidising, harmful and hazardous to the environment									
⊠ D	oxidising, toxic and corrosive									
(ii) Explain one precaution that should be taken when preparing the sample of chlorine gas.precaution										
reason										
(b) State the purpose of the delivery tube.										
(c) Suggest w	rhy damp blue litmus is placed at the top of the gas jar.	(2)								
to form ma	ction, potassium manganate(VII), KMnO $_4$, reacts with hydrochloric acid anganese chloride, MnCl $_2$, potassium chloride, chlorine and water.	(3)								
	(Total for Question 4 = 9 ma	rks)								

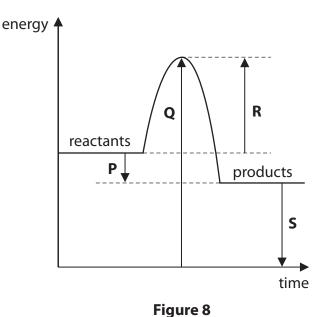

- **5** Ammonia can be produced from the reaction of hydrogen with nitrogen.
 - (a) What is the percentage by mass of nitrogen in ammonia, NH_3 ? (relative atomic masses: H = 1.0, N = 14)

(1)

- A 18%
- **■ B** 42%
- **■ C** 51%
- **D** 82%
- (b) The reaction between hydrogen and nitrogen is exothermic.

Figure 8 shows the reaction profile of this exothermic reaction.

(i) Which arrow represents the activation energy for the reaction?

(1)

- A arrow P
- B arrow Q
- C arrow R
- **D** arrow **S**

(ii)	Describe what the reaction profile shows about the energy involved in
	bond breaking and bond making in this reaction.

(2)

(iii) Figure 9 shows the energies of some bonds.

bond	bond energy in kJ mol ⁻¹
N≡N	944
Н—Н	436
H—N	388

Figure 9

The equation for the reaction between nitrogen and hydrogen to form ammonia is

$$N \equiv N + 3 H - H \rightarrow 2 \begin{array}{c} H \\ N \end{array}$$

Calculate the energy change, in kJ mol⁻¹, for this reaction.

	(Total for Question 5 = 11 marks)		
	Explain why the boiling points of ammonia and silicon dioxide are so different.	(3)	
	Ammonia has a boiling point of –33 °C. Silicon dioxide has a boiling point of 2230 °C. Explain why the bailing points of appropria and silicon dioxide are so different		
(c)	Ammonia, NH ₃ , and silicon dioxide, SiO ₂ , are both compounds that are made of two non-metallic elements.		

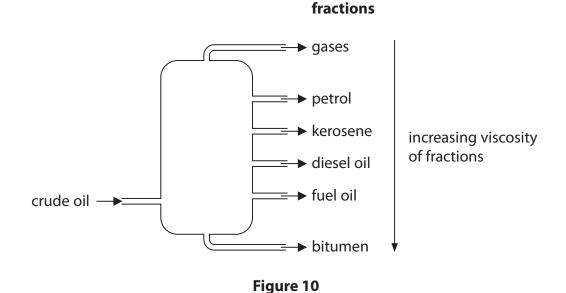

BLANK PAGE

6 Crude oil is a mixture of hydrocarbons.

Crude oil can be separated into useful fractions by the process of fractional distillation in a fractionating column.

(a) Figure 10 shows a fractionating column, the fractions obtained and the trend in viscosity of the fractions.

(i) Which row shows the correct uses for bitumen, diesel oil and fuel oil?

(1)

(2)

		bitumen	diesel oil	fuel oil
×	A	fuel for large ships	surfacing roads	fuel for trains
×	В	fuel for large ships	fuel for trains	surfacing roads
×	C	surfacing roads	fuel for trains	fuel for large ships
X	D	surfacing roads	fuel for large ships	fuel for trains

(ii)	Explain the trend in the viscosit	y of the fractions.

(b) Hydrocarbon \mathbf{X} was cracked to form one molecule of hexane, C_6H_{14} , and one molecule of alkene \mathbf{Y} .

$$\boldsymbol{X} \ \rightarrow \ C_6 H_{14} \ + \ \boldsymbol{Y}$$

The relative formula mass of Y is 56.

The empirical formula of \mathbf{Y} is CH_2 .

Deduce the molecular formula of hydrocarbon X.

Show your working.

(relative atomic masses: H = 1.0, C = 12)

(4)

molecular formula of **X** = _____

*(c) Large quantities of methane are used as a fuel.

Figure 11 shows a Bunsen burner.

Methane can be used as fuel for the Bunsen burner.

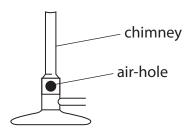

Figure 11

The air-hole on the chimney of the Bunsen burner can be opened and closed.

Explain the effect of opening and closing the air-hole of the Bunsen burner on the products of combustion of methane and the harm that using large quantities of methane as a fuel can cause.
