Edexcel, BTEC and LCCI qualifications

Edexcel, BTEC and LCCI qualifications are awarded by Pearson, the UK’s largest awarding body offering academic and vocational qualifications that are globally recognised and benchmarked. For further information, please visit our qualification websites at www.edexcel.com, www.btec.co.uk or www.lcci.org.uk. Alternatively, you can get in touch with us using the details on our contact us page at qualifications.pearson.com/contactus

About Pearson

Pearson is the world’s leading learning company, with 40,000 employees in more than 70 countries working to help people of all ages to make measurable progress in their lives through learning. We put the learner at the centre of everything we do, because wherever learning flourishes, so do people. Find out more about how we can help you and your learners at qualifications.pearson.com

Introduction

The Pearson Edexcel Level 1/Level 2 GCSE (9-1) in Biology is designed for use in schools and colleges. It is part of a suite of GCSE qualifications offered by Pearson.

These sample assessment materials have been developed to support this qualification and will be used as the benchmark to develop the assessment students will take.
Introduction

The Pearson Edexcel Level 1/Level 2 GCSE (9-1) in Biology is designed for use in schools and colleges. It is part of a suite of GCSE qualifications offered by Pearson.

These sample assessment materials have been developed to support this qualification and will be used as the benchmark to develop the assessment students will take.
All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.

Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than be penalised for omissions.

Examiners should mark according to the mark scheme – not according to their perception of where the grade boundaries may lie.

All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.

Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification/indicative content will not be exhaustive.

When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, a senior examiner must be consulted before a mark is given.

Crossed-out work should be marked unless the candidate has replaced it with an alternative response.

Subject specific marking guidance

Symbols, terms used in the mark scheme

Round brackets ( ): words inside round brackets are to aid understanding of the marking point but are not required to award the point

Curly brackets { }: indicate the beginning and end of a list of alternatives (separated by obliques) where necessary to avoid confusion

Oblique /: words or phrases separated by an oblique are alternatives to each other and either answer should receive full credit.

ecf: indicates error carried forward which means that a wrong answer given in an early part of a question is used correctly to a later part of a question.

You will not see ‘owtte’ (or words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific.

The Additional Guidance column is used for extra guidance to clarify any points in the mark scheme. It may be used to indicate:

what will not be accepted for that marking point in which case the phrase ‘do not accept’ will be alongside the relevant marking point

it might have examples of possible acceptable answers which will be adjacent to that marking point
**General marking guidance**

- All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than be penalised for omissions.
- Examiners should mark according to the mark scheme – not according to their perception of where the grade boundaries may lie.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification/indicative content will not be exhaustive.
- When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, a senior examiner must be consulted before a mark is given.
- Crossed-out work should be marked unless the candidate has replaced it with an alternative response.

**Subject specific marking guidance**

*Symbols, terms used in the mark scheme*

- Round brackets ( ): words inside round brackets are to aid understanding of the marking point but are not required to award the point
- Curly brackets { }: indicate the beginning and end of a list of alternatives (separated by obliques) where necessary to avoid confusion
- Oblique /: words or phrases separated by an oblique are alternatives to each other and either answer should receive full credit.
- ecf: indicates error carried forward which means that a wrong answer given in an early part of a question is used correctly to a later part of a question.

You will not see ‘owtte’ (or words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific.

The Additional Guidance column is used for extra guidance to clarify any points in the mark scheme. It may be used to indicate:

- what will not be accepted for that marking point in which case the phrase ‘do not accept’ will be alongside the relevant marking point
- it might have examples of possible acceptable answers which will be adjacent to that marking point
Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
  - **there may be more space than you need.**
- Calculators may be used.
- Any diagrams may **NOT** be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with **your answer clearly identified** at the **end of your solution.**

Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
  - **use this as a guide as to how much time to spend on each question.**
- In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
1 Eye colour is controlled by genes.

The allele for brown eyes, B, is dominant to the allele for blue eyes, b.

(a) A female with blue eyes and a male with brown eyes are about to have a child.

Complete the Punnett square to determine the phenotype of the child.

\[
\begin{array}{cc}
\text{man} & \text{B} & \text{B} \\
\text{woman} & b & \\
b & \\
\end{array}
\]

Phenotype of child

.......................................................................................................................... ... ..........................................................................................................................

.......................................................................................................................... ... ..........................................................................................................................
(b) A scientist recorded the eye colour of 30 people.

The results are shown in Figure 1.

```
blue  green  blue  brown  brown  brown  hazel  blue
brown  hazel  blue  blue  hazel  green  brown  brown
blue  green  brown  brown  blue  hazel  blue  brown
brown  blue  brown  brown  brown
```

**Figure 1**

(i) Complete the tally chart, in Figure 2, for this data.

(ii) Give another appropriate method of displaying this information.
A section of one allele for eye colour has the following DNA sequence:

ATGGCTAAGTA

(c) (i) Which sequence is the complementary DNA strand?

- A  ATGGCTAAGTA
- B  CGTTAGCCTGC
- C  TACCGATTCT
- D  GCAATGGACG

(ii) Give one way in which a second allele for eye colour might be different.
Figure 3 outlines a method that can be used to extract DNA from fruit.

Crush fruit with a buffer solution containing detergent

Filter the mixture

Add ethanol and remove the DNA

Figure 3

(d) (i) Give a reason for filtering the mixture.

.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................

(ii) What is the role of the ethanol?

☐ A  denature the enzymes
☐ B  disrupt cell membranes
☐ C  supercoil the DNA
☐ D  to precipitate the DNA

(Total for Question 1 = 9 marks)
2  Antibiotics can be used to treat Chlamydia, which is a sexually transmitted infection.

(a) What type of pathogen causes Chlamydia?

☐ A  bacteria
☐ B  fungus
☐ C  protist
☐ D  virus

Figure 4 shows the number of new cases of Chlamydia diagnosed each year, in a region of the UK, between 2000 and 2008.

(b) (i) In 2009 there were 4800 new cases diagnosed.
In 2010 there were 4100 new cases diagnosed.
Plot this data on the graph in Figure 4.
(ii) Describe the trend in cases between 2000 and 2010.

..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................

People infected with Chlamydia are more likely to be infected with the STI Gonorrhoea.

(iii) Explain how people become infected with both Chlamydia and Gonorrhoea.

..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................

HIV is a sexually transmitted infection.

(c) Explain how infection with HIV can lead to AIDS.

..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................

(Total for Question 2 = 8 marks)
The sugar molecule glucose can be detected by a chemical test.

(a) Use words from the box to complete the sentences.

blue-black   iodine   brick red
Biuret   lilac   Benedict’s

The ____________________________ reagent is added to a tube containing a solution of glucose.

The tube is heated and the colour changes to a ____________________________ colour.

Sugary drinks have been linked to tooth decay.

Tooth decay occurs when the enamel on teeth is dissolved.

A scientist investigates the effect of five different drinks on artificial tooth enamel.

She places 10 g of artificial tooth enamel into 100 ml of each drink. These are left for seven days.

The percentage change of mass for each sample of enamel is calculated.

Figure 5 shows the results.

<table>
<thead>
<tr>
<th>drink</th>
<th>cola</th>
<th>milk</th>
<th>lemonade</th>
<th>squash</th>
<th>milkshake</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentage change of mass (%)</td>
<td>–3.4</td>
<td>0.0</td>
<td>–2.8</td>
<td>–0.6</td>
<td>–1.6</td>
</tr>
</tbody>
</table>

Figure 5

(b) (i) Which drink is most likely to cause tooth decay?

- [ ] A  cola
- [ ] B  lemonade
- [ ] C  milkshake
- [ ] D  squash
(ii) Explain why it might be better to drink milk rather than a milkshake.

Use data from Figure 5.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

The scientist is concerned that the conclusions from this experiment might not show the real effect of sugary drinks on teeth.

(iii) Give two ways in which the scientist could improve the investigation.

1 ..........................................................................................................................
.......................................................................................................................... ...
.......................................................................................................................... ...

2 ..........................................................................................................................
.......................................................................................................................... ...
.......................................................................................................................... ...

The sugar content of drinks is not the only dietary factor that can affect health.

(iv) Give one other dietary factor that a person should consider when choosing a drink.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(Total for Question 3 = 8 marks)
4 Figure 6 shows a diagram of a cell.

(a) (i) Which row of the table identifies both structure P and structure Q?

<table>
<thead>
<tr>
<th>structure P</th>
<th>structure Q</th>
</tr>
</thead>
<tbody>
<tr>
<td>A nucleus</td>
<td>cell membrane</td>
</tr>
<tr>
<td>B nucleus</td>
<td>cell wall</td>
</tr>
<tr>
<td>C vacuole</td>
<td>cell membrane</td>
</tr>
<tr>
<td>D vacuole</td>
<td>cell wall</td>
</tr>
</tbody>
</table>

(ii) Plant cells have a cell wall and a large vacuole.

Draw one straight line from each structure to its function.

- **structure**
  - cell wall
  - large vacuole

- **function**
  - where respiration occurs
  - contains cellulose to provide support
  - where photosynthesis occurs
  - controls the cell
  - stores cell sap
Figure 7 shows an image of an animal cell taken using a microscope with a 10× eyepiece lens and a 40× objective lens.

![Image of an animal cell](source: © Ed Reschke/Getty Images)

**Figure 7**

(b) (i) The total magnification of the animal cell is

- A ×50
- B ×140
- C ×400
- D ×4000

(ii) The diameter of the cell is 15 µm.

Use Figure 7 to estimate the diameter of the cell nucleus.

(iii) Give the measurement of 15 µm in mm.
The development of electron microscopes has increased our understanding of cells and their features.

Figure 8 shows two images of ciliated epithelium, one taken using a light microscope and one using an electron microscope.

![Light microscope](image1.png) ![Electron microscope](image2.png)

*Figure 8*

(c) Explain how the electron microscope image helps us to understand more about ciliated epithelium.

(Total for Question 4 = 9 marks)
5 Cell division processes are used to produce body cells and gametes.

The nucleus of a daffodil cell has 46 chromosomes.

(a) (i) State the number of chromosomes in each pollen grain from this daffodil.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(ii) Humans share 35% of their DNA with a daffodil.

The human genome contains 6600 million bases.

Calculate the number of bases that are the same as a daffodil.

\[ \text{number of bases} = \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \text{
(ii) Which process occurs causing the divided cells to become specialised?

- [ ] A meiosis
- [ ] B cloning
- [ ] C differentiation
- [ ] D cytokinesis

A student wanted to observe dividing cells under a microscope.

The student squashed the root tip of an onion plant on a microscope slide.

(c) (i) Describe how the student should use a light microscope to view the squashed root tip.

(Total for Question 6 = 9 marks)
7 Figure 12 shows the times when *Homo sapiens* and some of their ancestral species are thought to have lived.

![Figure 12](image)

(a) Fossil remains of *Ardipithecus ramidus* were discovered in Ethiopia.

(i) Calculate the number of years *Ardipithecus ramidus* is thought to have inhabited the Earth.

(ii) Describe the evidence that scientists might have used to show that *Ardipithecus ramidus* inhabited the Earth earlier than *Homo habilis*.
(iii) Suggest an explanation for the extinction of *Homo habilis*.

(iv) Figure 13 shows two stone tools, one used by *Homo habilis* and one used by *Homo erectus*.

![Stone tools image](Source: Frederic Surmely/look at sciences/Science Photo Library)

**Figure 13**

Explain which stone tool was most likely to be used by *Homo erectus*.

Use information from Figure 12 and Figure 13.

(2)
(b) The population of humans on Earth has increased significantly, leading to food shortages.

The growth of drought-resistant crop plants could lead to an increase in food supply.

Describe how drought-resistant crop plants can be produced. 

(Total for Question 7 = 11 marks)
8  *Streptococcus pyogenes* is a bacterium that causes communicable infections.

(a) Scientists tested the ability of two antiseptics to kill *Streptococcus pyogenes* bacteria.

They spread *Streptococcus pyogenes* bacteria on two agar jelly plates and placed a small disc of filter paper containing antiseptic in the centre of each dish.

Figure 14 shows the results of the test after 24 hours of incubation.

![Diagram of bacterial growth and zone of inhibition](image)

9 The ratio of waist-to-hip measurements can be used to determine the risk of a person developing cardiovascular disease.

(a) Calculate the waist-to-hip ratio for a person with a waist measurement of 830 mm and a hip measurement of 0.99 m.

Give your answer to two decimal places.

Answer = ..............................................................

(b) Dieting can reduce the effects of cardiovascular disease.

A scientist is planning to test a new diet for weight loss.

She selects 40 obese people to take part in the test.

All the obese people are between 20 and 30 years of age.

(i) State two other factors the scientist should control when selecting the people.

..........................................................................................................................
Smoking is a lifestyle factor that can cause many diseases.

Figure 15 shows the trends in smoking between 1960 and 2010 for men and women.
*(c) Explain how the changes in the trends for smoking may affect the occurrence of cardiovascular disease. (6)*

(Total for Question 9 = 13 marks)
10 Gregor Mendel investigated the genetics of peas.

He did not know about genes but showed that inherited characteristics can be dominant or recessive.

(a) Explain how Mendel used homozygous tall and homozygous short pea plants to show that the tall allele is dominant to the short allele.

(b) Figure 16 shows a drosophila fruit fly. Explain how Gregor Mendel could have used a brown drosophila fruit fly and a black drosophila fruit fly to show that brown body colour is dominant to black body colour.
*(b) Figure 16 shows a drosophila fruit fly.

(Source: Science Photo Library)

**Figure 16**

The brown body colour of a drosophila fruit fly is dominant to black body colour and is not sex-linked.

Explain how Gregor Mendel could have used a brown drosophila fruit fly and a black drosophila fruit fly to show that brown body colour is dominant to black body colour.

(6)
(c) Figure 17 shows a strawberry plant that has produced several runners and new strawberry plantlets are growing at the end of each runner. This is an example of asexual reproduction.

![Figure 17](image)

(i) Explain why asexual reproduction in strawberries is beneficial to strawberry farmers.

(ii) Explain why seed production is an advantage to the strawberry plant.

(Strawberry fruits, containing seeds, are produced after a flower is fertilised.)

(Total for Question 10 = 12 marks)
### Question 1(a)
A completed Punnett square, including:
- offspring alleles correct (1)
- phenotype of child: brown eyes (1)

<table>
<thead>
<tr>
<th>Man</th>
<th>B</th>
<th>B</th>
</tr>
</thead>
<tbody>
<tr>
<td>Woman</td>
<td>b</td>
<td>Bb</td>
</tr>
<tr>
<td></td>
<td>b</td>
<td>Bb</td>
</tr>
</tbody>
</table>

### Question 1(b)(i)
- All four columns correct (tally and total) (2)
- One or two correct columns (1)

<table>
<thead>
<tr>
<th></th>
<th>blue: 9</th>
<th>brown: 14</th>
<th>green: 3</th>
<th>hazel: 4</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Question 1(b)(ii)
Could be displayed as a bar chart/pie chart

### Question 1(c)(i)
C

### Question 1(c)(ii)
Any one from:
- mutation in the base sequence (1)
- different base sequence (1)
- different sequence length (1)
- different amino acid sequence (1)

### Question 1(d)(i)
To remove insoluble material

### Question 1(d)(ii)
D

| 2(b)(ii)        | An answer that combines points of interpretation/evaluation to provide a logical description:  
                    • overall trend increases until 2009 (1)  
                    • decrease in the number of cases in 2010/correct manipulation of the data (1)  
                    e.g. in 2010 it decreased by 700 cases (1) | (2)  |
| 2(b)(iii)       | An explanation that combines identification – understanding (1 mark) and reasoning/justification – understanding (1 mark):  
                    • Chlamydia and Gonorrhoea are STI infections spread by the same mechanism (1)  
                    • individuals aren’t using a barrier contraception method (1) | (2)  |
| 2(c)            | An explanation that combines identification – knowledge (1 mark) and reasoning/justification – understanding (1 mark):  
                    • HIV destroys {white blood cells/cells of the immune system} (1)  
                    • therefore a reduced immune response makes the individual more susceptible to other communicable diseases (1) | (2)  |
| 3(a)            | • Benedict’s (1)  
                    • brick red (1)  
                    Answers must be in the correct order | (2)  |
<p>| 3(b)(i)         | A                                                                      | (1)  |</p>

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – **there may be more space than you need**.
- Calculators may be used.
- Any diagrams may **NOT** be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with your answer clearly identified at the end of your solution.

Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets – **use this as a guide as to how much time to spend on each question**.
- In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

**Turn over**
Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☑.
If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☑.

1 Plants need light for photosynthesis.

Part of the photosynthesis equation is shown below.

\[
\text{reactant} \quad + \quad \text{carbon dioxide} \quad \rightarrow \quad \text{glucose} \quad + \quad \text{product}
\]

(a) Which of the following would complete the photosynthesis equation?

(1)

<table>
<thead>
<tr>
<th>reactant</th>
<th>product</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ A</td>
<td>water</td>
</tr>
<tr>
<td>□ B</td>
<td>chlorophyll</td>

<tr>
<td>□ C</td>
<td>water</td>
</tr>
<tr>
<td>□ D</td>
<td>oxygen</td>
</tr>
</tbody>
</table>
A scientist investigates the effect of light intensity on photosynthesis.

He sets up the equipment shown in Figure 1.

![Figure 1](image)

He places the lamp 10 cm from the test tube and records the number of bubbles produced in five minutes.

He repeats the procedure with the lamp at a distance of 20 cm and 30 cm away from the test tube.

The scientist wants to repeat his investigation at each distance.

(b) (i) State **three** variables that should be kept constant to improve the results.

1. ..........................................................................................................................
2. ..........................................................................................................................
3. ..........................................................................................................................
The scientist noticed that the temperature of water near the light increased.

(ii) Give **one** improvement the scientist could make to reduce the effect of this increase in temperature.

(c) Figure 2 shows the results of the investigation.

<table>
<thead>
<tr>
<th>distance (cm)</th>

</tr>
<tr>
<td>30</td>
<td>10</td>
</tr>
</tbody>
</table>

**Figure 2**

(i) Calculate the mean result for a distance of 20 cm.

(ii) The number of bubbles counted for test 2 at 10 cm was anomalous.

(ii) State how the scientist could deal with this anomaly.
(iii) Give a conclusion about the effect of light intensity on photosynthesis.

(Total for Question 1 = 8 marks)
2 Figure 3 shows a pair of human lungs.

![Figure 3](image)

(a) (i) Where does gas exchange take place in the lungs?

- A alveolus
- B bronchus
- C bronchiole
- D trachea

A person had emphysema. This reduces the number of alveoli in the lungs.

(ii) Explain how emphysema would affect the amount of oxygen carried in the bloodstream.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
(b) Figure 4 is a table that shows the surface area (SA) to volume (V) ratio in three different sized cubes.

<table>
<thead>
<tr>
<th>cube size (cm)</th>
<th>surface area / SA (cm²)</th>
<th>volume / V (cm³)</th>
<th>SA : V ratio</th>

<td>1.5:1</td>
</tr>
<tr>
<td>6</td>
<td>216</td>
<td>216</td>
<td>1:1</td>
</tr>
</tbody>
</table>

Figure 4

(i) Calculate the SA:V ratio for the 2 cm cube.

(ii) Give one reason why it is important that human lungs have a high surface area to volume ratio.

Oxygen is involved with aerobic respiration in cells.

(iii) Which is the correct equation for aerobic respiration?

\[ \text{A} \quad \text{oxygen} + \text{carbon dioxide} \rightarrow \text{glucose} + \text{lactic acid} \]
\[ \text{B} \quad \text{carbon dioxide} + \text{water} \rightarrow \text{oxygen} + \text{lactic acid} \]
\[ \text{C} \quad \text{glucose} + \text{oxygen} \rightarrow \text{carbon dioxide} + \text{water} \]
\[ \text{D} \quad \text{glucose} + \text{water} \rightarrow \text{carbon dioxide} + \text{oxygen} \]

(Total for Question 2 = 7 marks)
3  (a) Plankton, krill and cod are found in the Arctic ocean.

    Figure 5 shows the mass of organisms in an area of the Arctic ocean.

    \[
    \begin{array}{c}
    \text{plankton} \\
    20000 \text{g}
    \end{array}
    \quad \begin{array}{c}

    \]

    \textbf{Figure 5}

    (i) Draw an accurate pyramid of biomass for this food chain.

    \hspace{10cm}

    (ii) Give two reasons why all the biomass from the krill is not transferred to the cod.

    1 ..........................................................................................................................
    2 ..........................................................................................................................
(b) Large amounts of krill are now being caught to produce krill oil as a dietary supplement for humans.

(i) Explain how this will affect the cod. 

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(ii) Give one other factor that could affect the number of krill in the Arctic ocean.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(Total for Question 3 = 7 marks)
Thermoregulation is an important process of the human body.

Figure 6 shows a model of human skin.

(a) Explain how part A is involved in thermoregulation.

(b) Which part of the brain contains the thermoregulatory centre?

A) cerebellum  B) cerebral cortex  C) hypothalamus  D) medulla
4 Thermoregulation is an important process of the human body.

Figure 6 shows a model of human skin.

(a) Explain how part A is involved in thermoregulation.

(b) Which part of the brain contains the thermoregulatory centre?

☐ A cerebellum
☐ B cerebral cortex
☐ C hypothalamus
☐ D medulla
(c) Figure 7 shows how the internal temperature of a fish and an otter changes when the external temperature changes.

![Graph showing the relationship between internal temperature and external temperature for a fish and an otter.]

**Figure 7**

(i) Describe how the internal temperature of the fish changes in response to the external temperature.

(ii) Explain why it is important that the temperature of the otter is maintained at about 37°C.
(d) Shivering is one way in which humans can regulate their body temperature.

Explain how shivering helps to regulate body temperature.

(Total for Question 4 = 10 marks)
5 Scientists can measure how much water is lost by the leaves of a plant.

(a) (i) What is the movement of water molecules from an area with a low solute concentration to an area with a high solute concentration called?

☐ A active transport
☐ B diffusion
☐ C osmosis
☐ D transpiration

(ii) What structure transports water through the stem of the plant?

☐ A guard cell
☐ B phloem
☐ C stomata
☐ D xylem
(b) A scientist measured the rate of water loss from a plant shoot using a potometer.

Figure 8 shows the equipment used in the experiment.

![Diagram of potometer equipment](image)

**Figure 8**

The volume of water lost from the plant can be calculated by measuring the distance a bubble moves along the capillary tubing.

(i) Calculate the rate of water loss from the plant in mm$^3$/s if the volume of water lost was 12 mm$^3$ in 10 minutes.

rate of water loss = .............................................................. mm$^3$/s
(ii) Explain how the water loss would change if the plant only had one leaf.

The scientist wants to extend the investigation by considering other factors that affect transpiration rate.

(iii) State two variables, other than temperature, that she could investigate.

1

2

(c) Explain the effect of increasing air temperature on the rate of transpiration in a plant.

(Total for Question 5 = 11 marks)
6 (a) A scientist wanted to estimate the number of earthworms in a field using a quadrat.

The scientist placed the quadrats at random on the surface of the area being sampled and then watered the area with a very dilute solution of mustard. This causes the earthworms to come to the surface to be counted.

(i) Give a reason why the quadrats were placed at random.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(ii) Describe the gases that are exchanged across the skin of the earthworm as a result of the earthworm respiring.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(iii) What is the method in which gases are exchanged across the skin of the earthworm?

☐ A active transport
☐ B diffusion
☐ C osmosis
☐ D transpiration
(b) A student wants to estimate the number of daisy plants in a 500 m² field.

She uses a 1 m² quadrat to sample the field.

Figure 9 shows the results for the number of daisy plants counted in six areas sampled with the quadrat.

<table>
<thead>
<tr>
<th>sample number</th>
<th>number of daisy plants</th>
<th>mean diameter of daisy plants / cm</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>5</td>
<td>7</td>

</tr>
<tr>
<td>5</td>
<td>4</td>
<td>5</td>
</tr>
<tr>
<td>6</td>
<td>4</td>
<td>6</td>
</tr>
</tbody>
</table>

**Figure 9**

(i) Calculate the mean number of daisy plants for the six samples.

\[
\text{mean number of daisy plants} = \frac{5 + 2 + 6 + 3 + 4 + 4}{6} = \frac{24}{6} = 4
\]

(ii) Describe how the student could use this calculated mean to estimate the total number of daisy plants in this field.

...
Sample 2 was taken in an area where there were many overhanging trees.

(iii) Explain how these trees may have affected the distribution of daisy plants growing in this area.

.................................................................................................................................. 
.................................................................................................................................. 
.................................................................................................................................. 
.................................................................................................................................. 

(iv) Give two abiotic factors that could affect the distribution and size of daisies growing in this field.

.................................................................................................................................. 
.................................................................................................................................. 
.................................................................................................................................. 
.................................................................................................................................. 

(Total for Question 6 = 11 marks)
7 Figure 10 shows a diagram of the heart.

(a) (i) Vessel X takes

- □ A deoxygenated blood to the body  
- □ B deoxygenated blood to the lungs 
- □ C oxygenated blood to the body 
- □ D oxygenated blood to the lungs  

(ii) Give one reason why the wall of the left ventricle is thicker than the right.
Valves in the human heart may become damaged and no longer function.

(iii) Describe what would happen to the flow of blood in the left side of the heart if the bicuspid valve did not function effectively.

Figure 11 shows a photomicrograph of a blood vessel.

Figure 11

(b) Explain how the structure of this blood vessel is related to its function.
Figure 12 shows a diagram of the circulatory system of a fish.

(c) Describe the differences between the structure of the circulatory system of a fish and the human circulatory system.

(Total for Question 7 = 10 marks)
8 (a) Blood tests can be used to check a person’s blood glucose and hormone levels.

Figure 13 shows the results of two blood tests done on three people to check their blood glucose levels. Person 1 is healthy.

<table>
<thead>
<tr>
<th>blood glucose level (mmols/l)</th>
<th>after fasting for 12 hours</th>
<th>two hours after drinking 75 g glucose</th>
</tr>

</tr>
<tr>
<td>volume of water retained / cm$^3$</td>
<td>15</td>
<td>29</td>
<td>45</td>
<td>34</td>
</tr>
<tr>
<td>total mass of compost after water was added /g cm$^{-3}$</td>
<td>515</td>
<td>529</td>
<td>1045</td>
<td>1034</td>
</tr>
</tbody>
</table>

Figure 16

(i) Calculate the percentage change in mass for compost B.

\[
\text{Percentage change} = \frac{\text{final mass} - \text{initial mass}}{\text{initial mass}} \times 100
\]

\[
\frac{529 \text{ g} - 500 \text{ g}}{500 \text{ g}} \times 100 = \frac{29 \text{ g}}{500 \text{ g}} \times 100 = \frac{29}{500} \times 100 = 5.8 \%
\]

(ii) Explain which compost would be best to use in a pot containing strawberry plants to be grown during a hot summer.

(iii) State one way to improve this investigation in order to compare the results without having to calculate the percentage change in mass.
(iii) State one way to improve this investigation in order to compare the results without having to calculate the percentage change in mass.

(b) (i) Strawberries can be preserved by freezing them.

State how freezing helps to preserve strawberries.

When the strawberries are frozen they become soft.

(ii) Describe the features of a plant cell that help to maintain its structure.
Figure 17 shows a photomicrograph of a root cell.

Figure 17

(iii) Draw and label a single plant cell from this photomicrograph.

(Total for Question 9 = 11 marks)
10 A student wanted to investigate the effect of light on the growth of cress seedlings.

The student had three pots of seedlings grown in different conditions.

Pot A was placed in a window with light from one direction only.

Pot B was placed in a cupboard with no light.

Pot C was placed with light from above.

Figure 18 shows the seedlings at the end of the investigation.

(a) (i) Label the pots of cress seedlings A, B and C.
(ii) What is the response shown by the cress seedlings in Pot A?

☐ A negative gravitropism
☐ B negative phototropism
☐ C positive gravitropism
☐ D positive phototropism

(iii) State the plant hormone that causes the cress seedlings to grow towards the light.

(b) The student wanted to find out where the hormone that caused the response to directional light was found.

The student had two growing plant shoots and placed them both in a window with light coming from one direction.

Describe a method the student could use to show that the hormone was found in the tip of the plant shoot.

(2)
Figure 19 shows examples of two plants growing in a desert environment.

(Source: Steve Allen/Science Photo Library)

(Source: Pascal Goetgheluck/Science Photo Library)

Figure 19

*(c) Explain the adaptations that desert plants have that allow them to survive in this extreme environment.

An answer that combines the following points to provide a logical description of the method:
- remove the tip from one of the plant shoots and leave the other (1)
- measure the changes in growth and direction of movement (1)

**10(c)**

Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme.

The indicative content below is not prescriptive and candidates are not required to include all the material that is indicated as relevant. Additional content included in the response must be scientific and relevant.

**AO2 (6 marks)**

Adaptations
- these desert plants have:
  - spines
  - small leaves
  - thick waxy cuticles
  - fleshy/swollen stem

Plant survival
- spines, small leaves
  - reduced surface area
  - deter animals from eating for water
  - less water lost by evaporation
  - moist air trapped in curled leaves
- thick waxy cuticle less water lost by evaporation
- stem collects and stores water

**Level 1**<br>1–2 | | • The explanation attempts to link and apply knowledge and understanding of scientific ideas, flawed or simplistic connections made between elements in the context of the question.
• Lines of reasoning are unsupported or unclear. (AO2)

**Level 2**<br>3–4 | | • The explanation is mostly supported through linkage and application of knowledge and understanding of scientific ideas, some logical connections made between elements in the context of the question.
• Lines of reasoning mostly supported through the application of relevant evidence. (AO2)

**Level 3**<br>5–6 | | • The explanation is supported throughout by linkage and application of knowledge and understanding of scientific ideas, logical connections made between elements in the context of the question.
• Lines of reasoning are supported by sustained application of relevant evidence. (AO2)
Instructions

• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided – there may be more space than you need.
• Calculators may be used.
• Any diagrams may NOT be accurately drawn, unless otherwise indicated.
• You must show all your working out with your answer clearly identified at the end of your solution.

Information

• The total mark for this paper is 100.
• The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.
• In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.

• The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.
• In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice
• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.
Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒.
If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

1. Figure 1 shows the times when Homo sapiens and some of their ancestral species are thought to have lived.

(a) Fossil remains of Ardipithecus ramidus were discovered in Ethiopia.

(i) Describe the evidence that scientists might have used to show that Ardipithecus ramidus inhabited the Earth earlier than Homo habilis.

(ii) Suggest an explanation for the extinction of Homo habilis.
(iii) Figure 2 shows two stone tools, one used by *Homo habilis* and one used by *Homo erectus*.

![Stone tools](Source: Frederic Surmely/look at sciences/Science Photo Library)

**Figure 2**

Explain which stone tool was most likely to be used by *Homo erectus*.

Use information from Figure 1 and Figure 2.

(2)
(b) The population of humans on Earth has increased significantly leading to food shortages.

The growth of drought-resistant crop plants could lead to an increase in food supply.

Describe how drought-resistant crop plants can be produced.

(Total for Question 1 = 9 marks)
2 *Streptococcus pyogenes* is a bacterium that causes communicable infections.

(a) Scientists tested the ability of two antiseptics to kill *Streptococcus pyogenes* bacteria.

They spread *Streptococcus pyogenes* bacteria on two agar jelly plates and placed a small disc of filter paper containing antiseptic in the centre of each dish.

Figure 3 shows the results of the test after 24 hours of incubation.

![Image of antiseptics](image)

**(i)** Calculate the area of the zone of inhibition for antiseptic 2.

Give the answer to 3 significant figures.

($\pi = 3.14$)

\[
\text{zone of inhibition for antiseptic 2} = \phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0}\phantom{0\phantom{0}} \text{mm}^2
\]
(ii) Explain which antiseptic is the most effective.

(iii) After the bacteria were spread on the plates, both plates were incubated for 24 hours at 37°C.

Give a reason why the plates were incubated at 37°C.

(b) The wire loop used to spread bacteria on an agar plate was heated in a Bunsen burner flame before being used.

Explain why this aseptic precaution was used.

(Total for Question 2 = 8 marks)
3 The ratio of waist-to-hip measurements can be used to determine the risk of a person developing cardiovascular disease.

(a) Calculate the waist-to-hip ratio for a person with a waist measurement of 830 mm and a hip measurement of 0.99 m.

Give your answer to 2 decimal places.

Answer = ..............................................................

(b) Dieting can reduce the effects of cardiovascular disease.

(i) Which statement gives a reason why dieting can be used to reduce weight in obese people?

☐ A  Dieting increases metabolism and growth rate

☐ B  Dieting reduces energy consumption

☐ C  Dieting decreases metabolism

☐ D  Dieting increases energy consumption

(ii) A scientist is planning to test a new diet for weight loss.

She selects 40 obese people to take part in the test.

All the obese people are between 20 and 30 years of age.

State two other factors the scientist should control when selecting the people.
(iii) Devise a plan the scientist could use to test the effectiveness of the new diet using the 40 obese people.

(Total for Question 3 = 8 marks)
4 Gregor Mendel investigated the genetics of peas.

He did not know about genes but showed that inherited characteristics can be dominant or recessive.

(a) Explain how Mendel used homozygous tall and homozygous short pea plants to show that the tall allele is dominant to the short allele.

(b) Figure 4 shows a strawberry plant that has produced several runners and new strawberry plantlets are growing at the end of each runner. This is asexual reproduction.

Figure 4

(i) Explain why asexual reproduction in strawberries is beneficial to strawberry farmers.
(ii) Strawberry fruits, containing seeds, are produced after a flower is fertilised. Explain why seed production is an advantage to the strawberry plant.

(Total for Question 4 = 9 marks)
(c) Duchenne muscular dystrophy is a sex-linked recessive genetic disorder caused by a mutation on a single gene on the X-chromosome.

The letter D can be used for the dominant allele and the letter d for the recessive allele.

Figure 5 shows the inheritance of Duchenne muscular dystrophy in a family.

(i) What is the percentage chance of any child from person A inheriting the mutated allele?

☐ A 0%
☐ B 25%
☐ C 50%
☐ D 75%

(ii) Explain the conclusion that can be made about the genotype of person C.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(Total for Question 4 = 9 marks)
5 Diffusion, active transport and osmosis can be used to move substances into and out of cells.

(a) A student was investigating osmosis in potato cubes.

He used the following method:

- cut a potato into equal-sized cubes
- record the mass of each potato cube
- place each potato cube into different concentrations of salt solution
- remove the potato cubes after 30 minutes
- dry the potato cubes and record the final mass of each cube.

He plots his results on a graph shown in Figure 6.

![Graph showing osmosis results](attachment:graph.png)

The method controls a number of variables.

(i) Name one other variable that needs to be controlled during the student’s investigation.

(ii) Give a reason why the potato cube must be dried.
(iii) Explain the conclusion that can be made about point Q on Figure 6.

.......................................................................................................................................................................................... ...
.......................................................................................................................................................................................... ...
.......................................................................................................................................................................................... ...
.......................................................................................................................................................................................... ...

(iv) Give one way that the student could obtain more data to increase the accuracy of point Q.

.......................................................................................................................................................................................... ...
.......................................................................................................................................................................................... ...
.......................................................................................................................................................................................... ...
.......................................................................................................................................................................................... ...

(b) Osmosis is one method that single-celled organisms, such as bacteria, use to obtain molecules from their environment.

Which of the following is a correct description of a process involving the transport of molecules?

□ A  Diffusion is used to transport molecules against the concentration gradient

□ B  Active transport is used to obtain molecules in a low concentration environment

□ C  Active transport moves substances along the concentration gradient

□ D  Diffusion uses energy to transport molecules into cells
(c) Figure 7 shows some Vibrio cholerae, the bacteria that cause cholera.

![Flagellum](image)

**Magnification ×8000**

(Source: Corbis)

**Figure 7**

The length of one flagellum on Figure 7 is 68 mm.

Calculate the length of the flagellum in µm.

\[ \text{Length in } \mu\text{m} = \text{Length in mm} \times 10^6 \]

\[ \text{Length in } \mu\text{m} = 68 \times 10^6 \]

\[ \text{Length in } \mu\text{m} = 68,000,000 \]

(3)

(Total for Question 5 = 9 marks)
6 (a) DNA is composed of four different DNA nucleotides.

(i) Which diagram represents the arrangement of the sugar, phosphate and the base in a DNA nucleotide?

- [ ] A
- [ ] B
- [ ] C
- [ ] D

(ii) An allele starts with the DNA sequence ATGCATGTACCG.

Give the sequence of the complementary DNA sequence.

(iii) The length of one DNA nucleotide was measured at $3.3 \times 10^{-10}$ metres.

Calculate the approximate length of a gene containing 250 nucleotides in nanometres.
(b) The DNA of an organism determines its phenotype.

White tigers are produced because of a mutation of a single allele which usually produces the normal orange and yellow fur pigmentation.

The mutated allele is recessive.

Samba, a male white tiger, was bred with Rani. They had three offspring; two offspring have white fur and one has a normal fur pigmentation.

(i) State the genotype of Rani.

(ii) The offspring with normal fur pigmentation was bred with a tiger that was heterozygous.

Use A/a to represent the alleles for fur pigmentation.

Predict, using the Punnett square, the percentage probability of the offspring from this cross having normal fur pigmentation.

percentage probability = ............................................................. %

(c) Explain how two parents with a dominant phenotype can produce offspring expressing a recessive characteristic.

(2)
7 Figure 8 shows a diagram of the human eye.

![Diagram of the human eye]

Figure 8

(a) (i) Which structure of the eye contains the light receptor cells?

- [ ] A iris
- [ ] B lens
- [ ] C cornea
- [ ] D retina

(ii) The optic nerve transfers electrical signals from the eye to the central nervous system.

The optic nerve is a

- [ ] A relay neurone
- [ ] B motor neurone
- [ ] C sensory neurone
- [ ] D reflex neurone

(iii) Name the region of the central nervous system responsible for vision.

..................................................................................................................................
..................................................................................................................................
..................................................................................................................................
..................................................................................................................................
(b) Macular degeneration is a defect of the eye that occurs when some cells of the retina begin to break down.

Embryonic stem cell therapy has been used to improve the vision of some patients with macular degeneration.

Explain how embryonic stem cells could be used to treat macular degeneration.

(2)

\[\begin{align*}
\text{..........................................................................................................................}
\end{align*}\]

\(\text{(Total for Question 7 = 11 marks)}\)
8 Phenolphthalein is an indicator. It is pink in alkaline solutions and turns colourless as the pH decreases.

It can be used to measure the activity of the enzyme lipase on the breakdown of lipids.

Samples of milk containing phenolphthalein were incubated with lipase at different temperatures.

The time taken for the phenolphthalein to turn colourless was recorded and used to calculate the rate of enzyme activity.

Figure 10 shows these results.

(a) (i) Explain why phenolphthalein turns colourless when lipase breaks down the lipids in milk.

(ii) Describe the effect of temperature on the activity of lipase, as shown in Figure 10.

(iii) Explain why the activity of lipase changes above a temperature of 40 °C.

(b) A student investigated the time taken for amylase to breakdown a 10% starch solution into glucose at 37 °C. The student repeated the investigation five times.

Figure 11 shows the results.

(i) Calculate the rate of amylase enzyme activity for the 10% starch solution.

\[
\text{rate} = \frac{\text{total change in time}}{\text{time interval}} = \frac{120 + 125 + 110 + 115 + 118}{5} = 118 \text{ s}^{-1}
\]
(ii) Describe the effect of temperature on the activity of lipase, as shown in Figure 10.

(iii) Explain why the activity of lipase changes above a temperature of 40 °C.

(b) A student investigated the time taken for amylase to breakdown a 10% starch solution into glucose at 37 °C. The student repeated the investigation five times. Figure 11 shows the results.

Figure 11

(i) Calculate the rate of amylase enzyme activity for the 10% starch solution.

\[
\text{rate} = \text{ ............... s}^{-1}
\]
The investigation was done at 37°C.

(ii) State one other variable that the student should have controlled during this investigation.

(c) Different enzymes catalyse specific reactions.

Explain why enzymes can only catalyse specific reactions.

(Total for Question 8 = 12 marks)
9 When bacteria divide they replicate their genome and synthesise their cell wall.

Figure 12 outlines the stages of bacterial replication.

(a) Penicillin inhibits the synthesis of the cell wall in bacteria.

Explain the effect of penicillin on bacterial and human cells.

(3)
(b) Penicillin, isolated from a fungus, was the first antibiotic used to treat bacterial infections and is still widely used today.

Scientists have genetically engineered bacteria to produce large amounts of penicillin.

Describe how scientists would produce a genetically modified bacterium that produces penicillin.
*(c) MRSA is a bacterium that has evolved to become resistant to antibiotics.

With reference to Darwin's theory of evolution by natural selection, explain how MRSA bacteria have evolved to become resistant to antibiotics.

(Total for Question 9 = 13 marks)
10 There are different types of white blood cell in the body. One type is called CD4+ T-Helper cells.

The normal range of these cells in the blood is between $5 \times 10^4$ and $1.2 \times 10^6$ cells/dm$^3$.

An AIDS patient has a CD4+ T-Helper cell count of $1.5 \times 10^6$ cells/dm$^3$.

(a) Explain why the CD4+ count of $1.5 \times 10^6$ cells/dm$^3$ has led to the diagnosis of AIDS.

(b) Some sexually transmitted infections (STIs) can be diagnosed by testing urine samples.

These tests use monoclonal antibodies that bind to an antigen on the pathogen.

Describe how a monoclonal antibody can be developed and used to detect an STI using a urine sample.
(c) The antigens on pathogens can be proteins with a specific amino acid sequence.

Explain how the order of amino acids in a protein is determined by the sequence of the gene.

(Total for Question 10 = 12 marks)

TOTAL FOR PAPER = 100 MARKS
### Question 1(a)(i)

**Answer:** An answer that combines knowledge (1 mark) and understanding (1 mark) to provide a logical description:  
- (scientists might look for) differences in the structural features of the fossil (1)  
- and *Ardipithecus ramidus* would be deeper in the rock layer than *Homo habilis/stone tools* (1)  

<table>

**Question number** | **Indicative content** | **Mark**
---|---|---
*9(c) | Answers will be credited according to candidate’s deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. 

The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant. 

**AO1 (6 marks)**

- bacteria reproduce rapidly generating a large population
- there is variation among a bacterial population
- some bacteria develop a resistance to antibiotics through mutation
- antibiotic treatment exerts a selection pressure
- bacteria resistant to antibiotics survive
- antibiotic resistance inherited
- non-resistant bacteria do not survive
- levels of antibiotic resistance in a population of bacteria increase

### Question 10(c)

**Answer**

An explanation that combines identification – understanding (1 mark) and reasoning/justification – understanding (3 marks):
- A single strand of messenger RNA is transcribed from the gene in the nucleus (1)
- Messenger RNA molecule binds to the ribosome (1)
- The triplet code from the mRNA is matched by a complementary tRNA anticodon at the ribosome (1)
- tRNA transfers amino acids to the polypeptide chain in a specific order (1)

**Additional guidance**

To gain maximum marks the process must be in a logical sequence

Centre Number

Candidate Number

Pearson Edexcel
Level 1/Level 2 GCSE (9-1)

Biology
Paper 2

Sample Assessment Materials for first teaching September 2016

Time: 1 hour 45 minutes

You must have:
Calculator, ruler

Instructions
• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided – there may be more space than you need.
• Calculators may be used.
• Any diagrams may NOT be accurately drawn, unless otherwise indicated.
• You must show all your working out with your answer clearly identified at the end of your solution.

Information
• The total mark for this paper is 100.
• The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.
• In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice
• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.
Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒.
If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

1. Figure 1 shows a diagram of the heart.

(a) (i) Vessel X takes

☐ A deoxygenated blood to the body
☐ B deoxygenated blood to the lungs
☐ C oxygenated blood to the body
☐ D oxygenated blood to the lungs

(ii) Give one reason why the wall of the left ventricle is thicker than the right.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

Valves in the human heart may become damaged and no longer function.

(iii) Describe what would happen to the flow of blood in the left side of the heart if the bicuspid valve did not function effectively.

**Figure 6**

(a) (i) Calculate the percentage change in mass for compost B.

(ii) Explain which compost would be best to use for a pot containing strawberry plants to be grown during a hot summer.
(iii) State **one** way to improve this investigation in order to compare the results without having to calculate the percentage change in mass.

(b) One method of preserving strawberries is by using them to make jam.

Figure 7 shows a method for making strawberry jam.

**Procedure:**
Measure 2 kg of crushed strawberries. Place in a bowl. Add sugar, mix well, and allow to stand for 10 minutes. Transfer to a saucepan and heat until boiling. Stir apple pectin into fruit and continue stirring over a high temperature until the gel point is reached and there is a reduction in the water content. Pour jam into sterilised jars, leaving 1 cm of space at the top and cover.

**Figure 7**

(i) Explain why reducing the water content of the strawberries will help to preserve them.

(ii) Give a reason for sterilising the jars before adding the jam.

(Total for Question 3 = 8 marks)
A student wanted to investigate the effect of light on the growth of cress seedlings. The student had three pots of seedlings grown in different conditions. Pot A was placed in a window with light from one direction only. Pot B was placed in a cupboard with no light. Pot C was placed with light from above. Figure 8 shows the seedlings at the end of the investigation. (a) (i) Label the pots of cress seedlings A, B and C.
(ii) What is the response shown by the cress seedlings in Pot A?

- [ ] A  negative gravitropism
- [ ] B  negative phototropism
- [ ] C  positive gravitropism
- [ ] D  positive phototropism

(iii) State the plant hormone that causes the cress seedlings to grow towards the light.

(b) The student wanted to find out where the hormone that caused the response to directional light was found.

The student had two growing plant shoots and placed them both in a window with light coming from one direction.

Describe a method the student could use to show that the hormone was found in the tip of the plant shoot.
(c) Figure 9 shows a cross section through a pine leaf.

transport vessels
phloem and xylem

waxy cuticle

**Figure 9**

(i) Explain why the waxy cuticle is important for this pine leaf.

5 A scientist investigated the effect of light intensity on the rate of photosynthesis of the aquatic *Cabomba* plant.

A lamp was used as a source of light. The lamp was placed at different distances \((d)\) from the *Cabomba* plant, and the number of bubbles produced in 60 seconds was counted.

The number of bubbles produced in 60 seconds was used to calculate the rate of photosynthesis.

The light intensity was then calculated using the inverse square law \(\left(\frac{1}{d^2}\right)\).

Figure 10 shows the scientist's results.

<table>
<thead>
<tr>
<th>distance ((d)) of lamp from <em>Cabomba</em> (cm)</th>

<tr>
<td>30</td>
<td>0.0011</td>
<td>4</td>
</tr>
</tbody>
</table>

**Figure 10**

(a) (i) Calculate the light intensity when the lamp is 25 cm from the *Cabomba* plant.

\[
\text{light intensity} = \frac{1}{25^2} \text{ arbitrary units}
\]

(ii) Use information from Figure 10 to describe the effect of light intensity on the rate of photosynthesis.

.................................................................................................................................................................................................
(iii) Give another method of measuring light intensity rather than calculating it.  

(1)

(iv) The scientist counted the number of bubbles produced by the *Cabomba* plant.

Another scientist stated that this was not the best method of measuring the volume of gas produced.

Explain how you could improve the method to measure the volume of gas released more accurately.  

(2)

(b) Explain what would happen to the levels of gas produced if the light intensity decreased to 0.0001 arbitrary units.  

(2)

(Total for Question 5 = 9 marks)
6 Figure 11 shows the equipment used for measuring respiration in peas.

![Figure 11](image)

(Source: Martin Shields/Science Photo Library)

**Figure 11**

- Respirometer A contains germinating peas.
- Respirometer B contains peas that are not germinating.
- Respirometer C contains glass beads.

All three respirometers are placed in a water bath at 25 °C for 30 minutes. The reduction in oxygen levels in each respirometer is measured using a data logger.

(a) Explain why the respirometers are placed in a water bath at 25 °C.

(2)
(b) A student recorded the change in oxygen levels in the germinating peas over a 30-minute period.

The results are shown below.

A 10 mins (−0.8) ml, 20 mins (−1.6) ml, 30 mins (−2.4) ml
B 10 mins (−0.1) ml, 20 mins (−0.1) ml, 30 mins (−0.1) ml
C No change

(i) Complete the table for these results.

(ii) Calculate the rate of oxygen consumption per second for the results in respirometer A.

.............................................................. ml/second
(iii) Explain why respirometer A has the highest rate of oxygen consumption. (2)

..............................................................................................................................
..............................................................................................................................
..............................................................................................................................
..............................................................................................................................

(c) Some respirometers read the movement of a bubble along capillary tubing.

Carbon dioxide can affect the measuring of oxygen used in this type of respirometer.

State a chemical that could be placed in the respirometer that would stop carbon dioxide affecting the experiment. (1)

..............................................................................................................................
..............................................................................................................................

(Total for Question 6 = 9 marks)
A diabetic athlete is advised to estimate the number of grams of carbohydrate in his meals in order to calculate the number of units of insulin he will need to inject to lower his blood glucose concentration.

Each unit of insulin he injects reduces his blood glucose concentration by 1.5 mmol dm\(^{-3}\).

He needs to inject 1 unit for every 10 grams of carbohydrate he consumes.

Figure 12 shows the estimated carbohydrates in the breakfast eaten by the athlete.

(a) (i) Calculate how many units of insulin the athlete would need to inject to control the rise in blood glucose levels.

Give your answer to two significant figures.

(2) 

\[
\text{units of insulin} \quad \text{grams} \\
\]
(ii) The athlete miscalculated his carbohydrate intake to be greater than his actual intake.

Explain how the increase in the number of units injected would affect his blood glucose concentrations.

(2)

(b) (i) A patient visits his doctor because he is putting on weight but does not think he is increasing his calorie intake.

The patient has a height of 1.9m and a body mass of 120kg.

What is his BMI?

(1)

☐ A 0.0083
☐ B 33.2
☐ C 0.016
☐ D 66.4
The doctor diagnosed this person with an underactive thyroid gland.

*(ii) Explain why an underactive thyroid could cause this patient to have an increased body mass.

(Total for Question 7 = 11 marks)
8 (a) Figure 13 shows a food chain for organisms in a stream.

algae → stonfly larvae → water beetles → birds

**Figure 13**

(i) In the food chain there is $2.1 \times 10^4$ J of energy in the biomass of stonfly larvae. 90% of the energy is lost between each trophic level of the food chain.

Calculate the energy value that enters the birds.

(2)

(ii) State the impact of this energy loss on the length of the food chain.

(1)

(b) A group of students investigated the level of pollution in two different streams, A and B.

Figure 14 shows the student’s results.

<table>
<thead>
<tr>

</tbody>
</table>

**Figure 14**

Mayfly nymphs, caddis fly larvae and stonfly larvae are indicators of clean water.

(i) Calculate the percentage of organisms in stream A that are clean water indicators.

Give your answer to two significant figures.

(2)
(ii) Use the results to explain which stream is more polluted.

The student investigated a third stream, which is very slow flowing and runs through an area where intensive farming methods are used.

Figure 15 shows the thick layer of algae formed on top of this stream.

Figure 15

(c) Explain the effect of this algal growth on the organisms in the stream.

(Total for Question 8 = 11 marks)
9 The kangaroo rat is a mammal that can survive in desert environments and can tolerate much higher concentrations of sodium ions in their bloodstream than humans.

Figure 16 shows an image of the kangaroo rat.

![Image of Kangaroo Rat](Source: Richard R. Hansen/Science Photo Library)

**Figure 16**

(a) The name of the process that controls water levels in the body is

- [ ] A diffusion
- [ ] B osmosis
- [ ] C osmoregulation
- [ ] D thermoregulation
(b) (i) Explain how the blood entering the nephron of the kangaroo rat is filtered to remove excess sodium ions and water.

</table>

*Figure 17*

*(iii) Explain how ADH helps to control the levels of water and sodium ions in the bloodstream.

(Total for Question 9 = 12 marks)
10 Tropical fish excrete ammonia, which is an alkali.

The pH level of water in a tropical fish tank needs to be maintained between 6.6 and 7.4 for the fish to survive.

This is the optimum pH range for the bacteria that are responsible for the conversion of ammonia into nitrites and then nitrates.

*Nitroso*monas bacteria convert ammonia into nitrites.

*Nitrobo*acter bacteria convert nitrites into nitrates.

(a) (i) *Nitroso*monas bacteria are an example of

☐ A nitrogen fixing bacteria
☐ B nitrifying bacteria
☐ C denitrifying bacteria
☐ D *Helico*bacter bacteria

(ii) Explain why *Nitroso*monas and *Nitrobo*acter bacteria are needed in tropical fish tanks.

An aquatic plant in the fish tank had a concentration of nitrates higher than the water in the fish tank.

(iii) Explain how this aquatic plant can uptake nitrates from the water in the fish tank.
Leguminous plants have nodules on their roots that have colonies of nitrogen-fixing bacteria.

Clover is a leguminous plant.

(b) Describe how a quadrat could be used to sample the population of clover in a 500m² field.

..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................
..........................................................................................................................................................................................

• $0.699\,3464 \times 100 = 70\%$ (1) | award full marks for correct numerical answer without working | (2) |

### Question 8(b)(ii)

<table>
<thead>
<tr>
<th>Answer</th>
<th>Additional guidance</th>
<th>Mark</th>
</tr>
</thead>
</table>
| An explanation that combines identification via a judgment (1 mark) to reach a conclusion via justification/reasoning (1 mark):  
• stream B is more polluted that stream A (1)  
Plus one from:  
• (because) stream A contains stonefly larvae/mayfly larvae/caddis fly larvae (which are indicators of clean water) (1)  
• (because) stream B contains larger numbers of blood worm and sludge worm (which are indicators of polluted water) (1) | accept other correct indicators from the table.  
accept higher oxygen levels in place of clean water  
accept lower oxygen levels in place of polluted water | (2) |

### Question 8(c)

<table>
<thead>
<tr>
<th>Answer</th>
<th>Mark</th>
</tr>
</thead>
</table>
| An explanation that combines identification – understanding (1 mark) and reasoning/justification – understanding (3 marks):  
• plants growing on the bottom of the stream will be unable to receive sunlight due to the thick layer of algae (1)  
• these plants will not be able to photosynthesise and will die and start to decompose (1)  
• the microorganisms decomposing the plants will respire, removing oxygen from the water (1)  
• the stream will become anoxic/oxygen depleted and other respiring organisms (plants and animals) will not be able to survive so biodiversity will be reduced (1) | (4) |

| 9(b)(i)         | An explanation that combines identification – understanding (1 mark) and reasoning/justification – understanding (2 marks):  
• ultrafiltration occurs in the glomerulus where the liquid part of the blood passes into the Bowman’s capsule (1)  
• reabsorption takes place as it travels through the proximal convoluted tubule into the loop of Henle (1)  
• finally urine production occurs in the collecting duct and excess fluid and sodium ions are removed (1) | (3)  |

</thead>
</table>
| 9(b)(ii)        | An explanation that combines identification – application of knowledge (1 mark) and reasoning/justification – application of understanding (1 mark):  
• the kangaroo rat lives in the desert so it needs to retain as much water as possible (1)  
• as most water is reabsorbed in the loop of Henle, a longer loop gives more surface area for water reabsorption (1) | (2)  |
### AO2 (6 marks)

**water content**
- increased ADH causes more water to be reabsorbed into the bloodstream
- prevents dehydration
- decreased concentrations of ADH cause less water reabsorption
- greater volume of urine produced
- at 0.0 mol/dm$^{-3}$ of sodium ions the volume of ADH stored is at its highest
- so the lowest amount of ADH is released
- water levels in the body are regulated

**sodium ions**
- as sodium ion concentration increases the levels of ADH stored decrease
- at 0.25 mol/dm$^{-3}$ ADH stored reduced by 5 au
- so a small amount of water is reabsorbed
- at 0.50 mol/dm$^{-3}$ ADH stored reduced by a further 30 au
- a greater amount of water is reabsorbed
- the volume of ADH stored remains stable at 8 au
- causing the maximum amount of water to be reabsorbed
- preventing dehydration when sodium levels are high

### Level Mark Descriptor

</tbody>
</table>
| Level 1 | 1–2  | - The explanation attempts to link and apply knowledge and understanding of scientific ideas, flawed or simplistic connections made between elements in the context of the question.  
- Lines of reasoning are unsupported or unclear. (AO2) |
| Level 2 | 3–4  | - The explanation is mostly supported through linkage and application of knowledge and understanding of scientific ideas, some logical connections made between elements in the context of the question.  
- Lines of reasoning mostly supported through the application of relevant evidence. (AO2) |
| Level 3 | 5–6  | - The explanation is supported throughout by linkage and application of knowledge and understanding of scientific ideas, logical connections made between elements in the context of the question. |
context of the question.
- Lines of reasoning are supported by sustained application of relevant evidence. (AO2)

| **10(b)**       | An answer that combines the following points of application of knowledge and understanding to provide a logical description:  
  - a description of the use of a quadrat either by random sampling or using a belt transect (1)  
  - a sample size 10–100 and count the number of clover plants in each quadrat (1)  
  - multiplication factor dependent on the number of quadrats sampled (1)                                                                 | to gain maximum marks steps must be in a logical sequence                             | 3     |
| **10(c)**       | An explanation that combines identification – understanding (1 mark) and reasoning/justification – understanding (3 marks):  
  - clover/leguminous plants could be used in crop rotation (1)  
  - where at intervals (2–3 years) a field is planted with clover/leguminous plants and left fallow (1)  
  - the clover/leguminous plants will have colonies of nitrogen fixing bacteria which will produce nitrates (1)  
  - the nitrates will increase the fertility of the soil and negate the need for artificial fertilisers (1) |                                                                                       | 4     |
