GCSE (9-1) Physics

Sample Assessment Materials

Pearson Edexcel Level 1/Level 2 GCSE (9-1) in Physics (1PH0)

First teaching from September 2016
First certification from June 2018

Issue 1
Edexcel, BTEC and LCCI qualifications

Edexcel, BTEC and LCCI qualifications are awarded by Pearson, the UK’s largest awarding body offering academic and vocational qualifications that are globally recognised and benchmarked. For further information, please visit our qualification websites at www.edexcel.com, www.btec.co.uk or www.lcci.org.uk. Alternatively, you can get in touch with us using the details on our contact us page at qualifications.pearson.com/contactus

About Pearson

Pearson is the world’s leading learning company, with 40,000 employees in more than 70 countries working to help people of all ages to make measurable progress in their lives through learning. We put the learner at the centre of everything we do, because wherever learning flourishes, so do people. Find out more about how we can help you and your learners at qualifications.pearson.com

Introduction

The Pearson Edexcel Level 1/Level 2 GCSE (9-1) in Physics is designed for use in schools and colleges. It is part of a suite of GCSE qualifications offered by Pearson. These sample assessment materials have been developed to support this qualification and will be used as the benchmark to develop the assessment students will take.
Introduction

The Pearson Edexcel Level 1/Level 2 GCSE (9-1) in Physics is designed for use in schools and colleges. It is part of a suite of GCSE qualifications offered by Pearson.

These sample assessment materials have been developed to support this qualification and will be used as the benchmark to develop the assessment students will take.
General marking guidance

All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.

Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than be penalised for omissions.

Examiners should mark according to the mark scheme – not according to their perception of where the grade boundaries may lie.

All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.

Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification/indicative content will not be exhaustive.

When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, a senior examiner must be consulted before a mark is given.

Crossed-out work should be marked unless the candidate has replaced it with an alternative response.

Subject specific marking guidance

Symbols, terms used in the mark scheme

Round brackets ( ): words inside round brackets are to aid understanding of the marking point but are not required to award the point

Curly brackets { }: indicate the beginning and end of a list of alternatives (separated by obliques) where necessary to avoid confusion

Oblique /: words or phrases separated by an oblique are alternatives to each other and either answer should receive full credit.

ecf: indicates error carried forward which means that a wrong answer given in an early part of a question is used correctly to a later part of a question.

You will not see ‘owtte’ (or words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific.

The Additional Guidance column is used for extra guidance to clarify any points in the mark scheme. It may be used to indicate:

what will not be accepted for that marking point in which case the phrase ‘do not accept’ will be alongside the relevant marking point

it might have examples of possible acceptable answers which will be adjacent to that marking point

General marking guidance

- All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than be penalised for omissions.
- Examiners should mark according to the mark scheme – not according to their perception of where the grade boundaries may lie.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification/indicative content will not be exhaustive.
- When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, a senior examiner must be consulted before a mark is given.
- Crossed-out work should be marked unless the candidate has replaced it with an alternative response.

Subject specific marking guidance

Symbols, terms used in the mark scheme

- Round brackets ( ): words inside round brackets are to aid understanding of the marking point but are not required to award the point
- Curly brackets { }: indicate the beginning and end of a list of alternatives (separated by obliques) where necessary to avoid confusion
- Oblique /: words or phrases separated by an oblique are alternatives to each other and either answer should receive full credit.
- ecf: indicates error carried forward which means that a wrong answer given in an early part of a question is used correctly to a later part of a question.

You will not see ‘owtte’ (or words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific.

The Additional Guidance column is used for extra guidance to clarify any points in the mark scheme. It may be used to indicate:

- what will not be accepted for that marking point in which case the phrase ‘do not accept’ will be alongside the relevant marking point
- it might have examples of possible acceptable answers which will be adjacent to that marking point
Physics
Paper 1

Foundation Tier

Sample Assessment Material for first teaching September 2016

Time: 1 hour 45 minutes

You must have:
Calculator, ruler, protractor

Total Marks

Instructions

• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided
  – there may be more space than you need.
• Calculators may be used.
• Any diagrams may NOT be accurately drawn, unless otherwise indicated.
• You must show all your working out with your answer clearly identified at the end of your solution.

Information

• The total mark for this paper is 100.
• The marks for each question are shown in brackets
  – use this as a guide as to how much time to spend on each question.
• In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.
(iii) Each second, 0.12 J of energy from the Sun reaches 1 cm² of the screen.

Calculate the total amount of energy reaching the whole screen in 1 second.

\[
\text{energy} = 0.12 \times (11 \times 7) = 8.4 \text{ J}
\]

(b) Mobile phones emit microwaves. Microwave ovens emit microwaves. Explain why a mobile phone does not have the same heating effect as a microwave oven.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(Total for Question 1 = 7 marks)
(iii) Each second, 0.12 J of energy from the Sun reaches 1 cm² of the screen.

Calculate the total amount of energy reaching the whole screen in 1 second.

\[ \text{energy} = \text{ } \text{J} \]

(b) Mobile phones emit microwaves.

Microwave ovens emit microwaves.

Explain why a mobile phone does not have the same heating effect as a microwave oven.

(Total for Question 1 = 7 marks)
2 (a) A student is standing 600 m from a firework display.

A firework explodes with a loud bang, and a flash of light is seen.

Describe how a student can measure the time it takes for the sound wave from the loud bang to travel 600 m.

(b) Figure 2 shows a water wave.

(i) What is the amplitude of this wave?

- A 2.8 cm
- B 5.6 cm
- C 7.5 cm
- D 15 cm

(ii) What is the wavelength of this wave?

- A 2.8 cm
- B 7.5 cm
- C 15 cm
- D 30 cm
(c) Water waves are transverse waves.

(i) Give **one** other example of a transverse wave. 

(ii) Give **one** example of a longitudinal wave.

(d) An earthquake causes a sea wave.

This sea wave travels 26400 m in two minutes.

Calculate the speed of the wave.

Use the equation

\[
\text{wave speed} = \frac{\text{distance}}{\text{time}}
\]

\[(\text{Total for Question 2 = 9 marks})\]
3  (a) Figure 3 shows the structure of an oxygen-14 atom.
   (i) Complete the four labels on Figure 3.

   (ii) Which of these particles has a negative charge?

   □ A  alpha particle
   □ B  electron
   □ C  neutron
   □ D  nucleus

   (iii) State the overall charge of the oxygen-14 atom.
(b) A teacher uses a Geiger-Müller tube and a counter to measure background radiation.

The reading on the counter tube is 34 counts per minute.

(i) The teacher puts a source of beta radiation 15 cm in front of the same Geiger-Müller tube.

The reading on the counter tube is now 468 counts per minute.

Calculate how much radiation detected by the Geiger-Müller tube comes from the source of beta radiation.

(1) ............................................................. counts per minute

(ii) The teacher puts a thick sheet of aluminium between the source of beta radiation and the Geiger-Müller tube.

Estimate the reading on the counter tube.

(1) ............................................................. counts per minute

(iii) Give a reason why the answer to (ii) is only an estimate.

(1) ..........................................................................................................................

(Total for Question 3 = 9 marks)
A student investigates how light behaves as it leaves a clear plastic block. Figure 4 shows some of her equipment and the path of a ray of light through the block.

(a) Describe how the student can make sure the light does not change direction as it enters the block.
A student investigates how light behaves as it leaves a clear plastic block.

Figure 4 shows some of her equipment and the path of a ray of light through the block.

(a) Describe how the student can make sure the light does not change direction as it enters the block.
(b) She varies the angle of incidence inside the block and records the angle of refraction.

Figure 5 shows her results.

<table>
<thead>
<tr>
<th>angle of incidence (°)</th>
<th>angle of refraction (°)</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>7</td>
</tr>
<tr>
<td>15</td>
<td>22</td>
</tr>
<tr>
<td>30</td>
<td>46</td>
</tr>
<tr>
<td>40</td>
<td>69</td>
</tr>
<tr>
<td>42</td>
<td>76</td>
</tr>
</tbody>
</table>

**Figure 5**

(i) Plot the points on the grid below.  

(ii) Draw the best fit smooth curve through the points.
(iii) Estimate the angle of incidence which gives an angle of refraction of 90°.

\[
\text{angle of incidence} = \theta
\]

(c) Describe what happens to the ray of light when the angle of incidence is increased beyond the critical angle.

(Total for Question 4 = 9 marks)
5 (a) A car driver sees a rabbit on the road.

The driver makes an emergency stop after he sees the rabbit.

Figure 6 shows the speed of the car from the time the driver sees the rabbit until the car stops.

(i) The distance travelled by the car from the time the driver first sees the rabbit to when car starts to slow down is the

☐ A average distance
☐ B braking distance
☐ C stopping distance
☐ D thinking distance

(ii) Calculate the distance that the car travels in the first 0.5 seconds.

\[ \text{distance} = \frac{16.0 - 4.0}{2 \times 0.5} \text{ m} \]
(iii) Which equation relates acceleration to change in velocity and time?

- **A** \( a = \frac{(v - u)}{t} \)
- **B** \( a = \frac{t}{(v - u)} \)
- **C** \( a = t(v - u) \)
- **D** \( a = v - \frac{u}{t} \)

(iv) Calculate the deceleration of the car.

\[ \text{deceleration} = \ldots \ldots \ldots \ldots \ldots \ldots \ldots m/s^2 \]
(b) Two students, Alice and Bob, carry out an experiment to measure the speed of cars.

Alice paces out the distance between two lamp posts.

She records:

‘Distance between lamp posts = 20 paces’

Bob starts to count when a car passes the first lamp post. He stops counting when he thinks it has passed the second lamp post.

He records:

‘My estimate for the time taken for the car to pass between the two lamp posts = 3’

Give **three** ways the students could improve their experimental procedure.

1 .................................................................

.................................................................

2 .................................................................

.................................................................

3 .................................................................

.................................................................

(Total for Question 5 = 11 marks)
6 (a) A student investigates how the surface of an object affects the radiation it emits.

Figure 7 shows the equipment he uses.

![Image of radiation sensor and cube with different surfaces]

The cube has four different surfaces.

He fills the cube with boiling water so that the temperature of each surface is the same.

He uses the radiation sensor to measure the radiation emitted from each surface.

(i) His readings are shown.

Draw a line from each surface colour to its correct meter reading. One has been done for you.

<table>
<thead>
<tr>
<th>Surface Colour</th>
<th>Meter Reading</th>
</tr>
</thead>
<tbody>
<tr>
<td>shiny black</td>
<td>87</td>
</tr>
<tr>
<td>dull black</td>
<td>61</td>
</tr>
<tr>
<td>dull silver</td>
<td>70</td>
</tr>
<tr>
<td>shiny silver</td>
<td>47</td>
</tr>
</tbody>
</table>
(ii) The temperature of each surface is the same.

Give a reason why the radiation sensor gives a different reading for each surface.

(b) (i) What do all waves in the electromagnetic spectrum have in common?  

☐ A the same frequency in a vacuum  
☐ B the same speed in a vacuum  
☐ C the same colour in a vacuum  
☐ D the same amplitude in a vacuum

(ii) Blue light has a wavelength of 470 nm and a frequency of $6.30 \times 10^{14}$ Hz.  

Calculate the velocity of blue light.

$$velocity = \text{..........................} \text{ m/s}$$
(c) All objects emit electromagnetic radiation.

The intensity and wavelength of the emitted radiation vary with the temperature of the object.

Figure 8 shows this variation for an object at two different temperatures.

The visible region of the electromagnetic spectrum is also shown.

![Graph showing intensity and wavelength of emitted radiation for high and low temperatures.]

Figure 8

(i) In which part of the electromagnetic spectrum is the peak of the low temperature curve?

- [ ] A gamma
- [ ] B infrared
- [ ] C radio
- [ ] D ultra violet

(ii) Describe how intensity of the emitted radiation changes with temperature.

..........................................................................................................................

..........................................................................................................................

..........................................................................................................................

..........................................................................................................................

(Total for Question 6 = 9 marks)
7 (a) Scientists no longer accept the geocentric model of the universe but it was the accepted theory for hundreds of years.

Explain why the evidence available at the time supported the geocentric model.

(b) The Big Bang theory and the Steady State theory are two theories about the origin of the universe.

The discovery of CMB led scientists to accept only one of the theories.

Explain why redshift supports both theories but CMB supports only one of them.
(c) (i) A star with a mass very much larger than the Sun

- A has a longer main sequence than the Sun and ends as a white dwarf
- B has a longer main sequence than the Sun and ends as a black hole
- C has a shorter main sequence than the Sun and ends as a white dwarf
- D has a shorter main sequence than the Sun and ends as a black hole

(ii) Which row has two correct statements about black holes?

<table>
<thead>
<tr>
<th>the gravitational field of a black hole</th>
<th>a black hole is formed when</th>
</tr>
</thead>
<tbody>
<tr>
<td>A allows only electromagnetic radiation to escape</td>
<td>a nebula collapses</td>
</tr>
<tr>
<td>B allows nothing to escape</td>
<td>a very large star collapses</td>
</tr>
<tr>
<td>C allows nothing to escape</td>
<td>a nebula collapses</td>
</tr>
<tr>
<td>D allows only electromagnetic radiation to escape</td>
<td>a very large star collapses</td>
</tr>
</tbody>
</table>
(d) Figure 9 shows some lines in the absorption spectra from four different galaxies (A, B, C, and D) and from a laboratory source. All the spectra are aligned and to the same scale.

![Figure 9}

Explain, using Figure 9, which galaxy is furthest away from us.

(Total for Question 7 = 11 marks)
Figure 10 shows two students investigating reaction times.

Student B supports his left hand on a desk.

Student A holds a ruler so that the bottom end of the ruler is between the finger and thumb of student B.

When student A releases the ruler, student B catches the ruler as quickly as he can with his left hand.

The investigation is repeated with the right hand of student B.

**Figure 10**

(a) Give a reason why it is better to have the 0 cm mark at the bottom of the ruler rather than at the top.

(b) Give a reason why two students are needed for this investigation.
(c) The students took five results for the left hand and five results for the right hand.

Figure 11 shows their results.

<table>
<thead>
<tr>
<th>which hand</th>
<th>distance dropped (cm)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>trial 1</td>
</tr>
<tr>
<td>left</td>
<td>10.1</td>
</tr>
<tr>
<td>right</td>
<td>17.5</td>
</tr>
</tbody>
</table>

Figure 11

(i) Calculate the average distance dropped for the right hand. Give your answer correct to 2 significant figures.

\[
\text{distance} = \text{.......................... cm}
\]

(ii) Calculate the average time for the left hand.

Use the equation

\[
\text{time}^2 = \frac{\text{distance}}{500}
\]

\[
\text{average time} = \text{.......................... s}
\]
(d) Explain whether any of the readings are anomalous.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(2)

(e) Give **two** ways that the students can improve the quality of their data, other than ignoring anomalous results.

1 ..........................................................................................................................
..........................................................................................................................

2 ..........................................................................................................................
..........................................................................................................................

(2)

(f) Describe how the students could develop their investigation to investigate how reaction time changes with another variable.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(2)

(Total for Question 8 = 12 marks)
A car accelerates at a constant rate of 1.83 m/s\(^2\) along a flat straight road.

(a) The force acting on the car is 1.870 kN.

Calculate the mass of the car.

Give your answer to three significant figures.

\[
\text{mass} = \text{................................. kg}
\]

(b) The car accelerates from rest for 16 s.

Calculate the speed of the car after 16 s.

\[
\text{speed} = \text{................................. m/s}
\]
*(c) Figure 12 is a speed-time graph for a different car moving on a horizontal road.

**Figure 12**

Describe the energy transfers taking place during the movement of the car.

You should refer to energy stores as well as transfers between energy stores for all three sections of the graph.

(Total for Question 9 = 12 marks)
10 (a) Americium-241 is a radioactive isotope that emits alpha particles.

Americium-241 is used in smoke alarms.

Give a reason why it is safe to use americium-241 in smoke alarms.

(b) Iodine-131 is a radioactive isotope with a half-life of 8 days.

The activity of a sample of iodine-131 is 480 Bq.

Calculate the activity of the sample after 16 days.

(c) A student uses 59 dice to model radioactive decay.

He starts by rolling all the dice at the same time.

He removes all the dice that show a six.

He then rolls the remaining dice.

The student repeats this process five more times.

State two improvements the student could make to his model of radioactive decay.

activity = ................................................. Bq

1

2
(d) Radioactive isotopes can be used to investigate cancer and other illnesses.

The thyroid gland in the neck absorbs most of the iodine that our bodies need.

A person can become ill if their thyroid absorbs too little iodine.

Explain how a radioactive isotope with suitable properties may be used to investigate the uptake of iodine by this gland.

(Total for Question 10 = 11 marks)
### Equations

\[(\text{final velocity})^2 - (\text{initial velocity})^2 = 2 \times \text{acceleration} \times \text{distance}\]

\[v^2 - u^2 = 2 \times a \times x\]

\[
\text{energy transferred} = \text{current} \times \text{potential difference} \times \text{time}
\]

\[E = I \times V \times t\]

\[
\text{potential difference across primary coil} \times \text{current in primary coil} = \text{potential difference across secondary coil} \times \text{current in secondary coil}
\]

\[V_p \times I_p = V_s \times I_s\]

\[
\text{change in thermal energy} = \text{mass} \times \text{specific heat capacity} \times \text{change in temperature}
\]

\[\Delta Q = m \times c \times \Delta \theta\]

\[
\text{thermal energy for a change of state} = \text{mass} \times \text{specific latent heat}
\]

\[Q = m \times L\]

\[P_1 V_1 = P_2 V_2\]

\[
\text{to calculate pressure or volume for gases of fixed mass at constant temperature}
\]

\[
\text{energy transferred in stretching} = 0.5 \times \text{spring constant} \times (\text{extension})^2
\]

\[E = \frac{1}{2} \times k \times x^2\]

Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme.

The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant.

AO2 (6 marks)

- use a radioactive isotope of iodine as this is taken up by the gland
- isotope given by injection or orally
- gland is in the neck, so cannot use an alpha emitter as alpha will not exit through the skin
- use beta or gamma emitter
- isotope has to have a short enough half-life to minimise exposure to radiation but long enough for the reading to be taken
- allow time for isotope to reach gland
- use Geiger-Müller tube and counter to determine count rate of isotope in gland
- compare with normal count rate to determine whether uptake of iodine is normal

Physics
Paper 2
Foundation Tier

Sample Assessment Material for first teaching September 2016
Time: 1 hour 45 minutes

You must have:
Calculator, ruler

Total Marks

Instructions
• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided
  – there may be more space than you need.
• Calculators may be used.
• Any diagrams may NOT be accurately drawn, unless otherwise indicated.
• You must show all your working out with your answer clearly identified at the end of your solution.

Information
• The total mark for this paper is 100.
• The marks for each question are shown in brackets
  – use this as a guide as to how much time to spend on each question.
• In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice
• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.
1. (a) (i) Complete each box in Figure 1 to show how particles are arranged in a solid, liquid and gas.

One particle in each box has been drawn for you.

![Figure 1](solid_liquid_gas.png)

(ii) Which row of the table is correct for water compared to steam?

<table>
<thead>
<tr>
<th>the density of water is</th>
<th>the water molecules are</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ A bigger</td>
<td>smaller</td>
</tr>
<tr>
<td>□ B smaller</td>
<td>bigger</td>
</tr>
<tr>
<td>□ C bigger</td>
<td>closer together</td>
</tr>
<tr>
<td>□ D smaller</td>
<td>further apart</td>
</tr>
</tbody>
</table>
(b) A student investigates the density of a copper block and the density of a small stone, as shown in Figure 2.

![Figure 2](image)

(i) The student calculates the volume of the block as 13 cm³. She finds that the mass of the block is 100 g. Calculate the density of the block. Use the equation

\[ \text{density} = \frac{\text{mass}}{\text{volume}} \]

(2)

\[ \text{density} = \text{…………………} \text{g/cm}^3 \]
(ii) The student found the volume of the copper block by multiplying the area of its base by its height.

The small stone does not have straight sides.

Describe how the student could measure the volume of the small stone. You may use a diagram if it helps your answer.

(Total for Question 1 = 9 marks)
2 (a) Figure 3 shows a coil of wire called a solenoid.

![Figure 3](image)

Figure 3

Figure 4 gives information about the magnetic field of a solenoid.

<table>
<thead>
<tr>
<th>description of the magnetic field</th>
<th>part of magnetic field</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>inside the coil</td>

<tr>
<td>weak</td>
<td>❌</td>
</tr>
<tr>
<td>uniform</td>
<td>✓</td>
</tr>
<tr>
<td>non-uniform</td>
<td>❌</td>
</tr>
</tbody>
</table>

Figure 4

(i) Draw lines on Figure 5 to show the shape of the magnetic field inside the solenoid.

Use information from Figure 4.

![Figure 5](image)

Figure 5
(ii) Describe how a student can determine the shape of the magnetic field around the solenoid.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(b) A student investigates the magnetic properties of three rods. Each rod is made of one of the following materials:

- soft iron
- steel
- wood

The student places each rod in a solenoid that is connected to a direct current power supply.

The power supply is switched on for a short time.

The student tests the magnetic strength of each rod by seeing how many paper clips it can pick up as shown in Figure 6.

![Figure 6](image)
The student’s results are shown in Figure 7.

<table>
<thead>
<tr>
<th>rod</th>
<th>number of paper clips picked up by rod</th>
</tr>
</thead>
<tbody>

<td></td>
</tr>
<tr>
<td>C</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(Total for Question 2 = 6 marks)
3 An electric heater is used to heat some water.

Figure 8 shows the experimental setup used.

Figure 8

(a) Figure 9 shows the energy transferred by the electric heater in 1 second.

50 J of thermal energy supplied by the electric heater

38 J of thermal energy raising the temperature of the water

wasted energy

Figure 9

(i) How much energy is wasted each second? (1)

☐ A 12 J
☐ B 38 J
☐ C 50 J
☐ D 88 J
(ii) Describe what happens to the wasted energy.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(b) Explain one way the experiment can be improved to reduce the amount of wasted energy.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(c) The initial mass of the water in the beaker is 0.72 kg.

The electric heater is switched on for some time and the water boils.

The mass of the water after the heater is switched off is 0.60 kg.

The thermal energy transferred to the water while it boils is 270 000 J.

Use an equation from the formula sheet to calculate the specific latent heat of the water.

\[
\text{specific latent heat} = \text{ } \frac{270 000}{0.72 - 0.60} \text{ } J/kg \degree C
\]

(Total for Question 3 = 8 marks)
4 A man pulls a suitcase with a horizontal force, $F$, as shown in Figure 10. Two other forces acting on the suitcase are labelled $P$ and $Q$.

![Figure 10](image)

(a) (i) Which of these gives the correct names for the forces $P$ and $Q$?

<table>
<thead>
<tr>
<th>name of force $P$</th>
<th>name of force $Q$</th>
</tr>
</thead>
<tbody>
<tr>
<td>A upthrust</td>
<td>reaction</td>
</tr>
<tr>
<td>B reaction</td>
<td>friction</td>
</tr>
<tr>
<td>C reaction</td>
<td>reaction</td>
</tr>
<tr>
<td>D friction</td>
<td>upthrust</td>
</tr>
</tbody>
</table>

(ii) Draw an arrow on the diagram to represent the weight of the suitcase.
(b) The man pulls the suitcase for 80 m along a horizontal path.

The mass of the man and the suitcase is 85 kg.

The man does 1200 J of work on the suitcase as he pulls the suitcase along.

He walks with an average velocity of 1.5 m/s.

(i) Calculate the kinetic energy of the man and the suitcase.

\[ \text{kinetic energy} = \text{ } J \]

(ii) Calculate the horizontal force, \( F \), that the man exerts on the suitcase.

Use the equation:

\[ \text{work done} = \text{force} \times \text{distance moved in the direction of the force} \]

\[ \text{force} = \text{ N} \]
(c) The man runs up a set of stairs carrying his suitcase.

Explain whether he does more total work if he walks up the same stairs instead of running.

(2)

.............................................................................................................................
.............................................................................................................................
.............................................................................................................................
.............................................................................................................................

(d) The man lifts his suitcase.

The increase in gravitational potential energy of the suitcase is 264 J.

The mass of the suitcase is 12 kg.

Calculate the vertical height the suitcase is raised.

(gravitational field strength, \( g = 10 \text{ N/kg} \))

Use the equation:

\[
\text{change in gravitational potential energy} = \text{mass} \times g \times \text{change in vertical height}
\]

(2)

\[
\text{height raised} = \text{............................................... m}
\]

(Total for Question 4 = 10 marks)
5 The efficiency of an electric motor is investigated as shown in Figure 11.

The motor lifts a mass at a constant speed.

![Diagram of motor, motor shaft, bench, string, and mass](image)

**Figure 11**

The results are shown in Figure 12.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>current in motor</td>
<td>1.9 A</td>
</tr>
<tr>
<td>voltage across motor</td>
<td>10.0 V</td>
</tr>
<tr>
<td>time taken to lift mass</td>
<td>9.0 s</td>
</tr>
</tbody>
</table>

**Figure 12**

(a) (i) Which of these changes would improve the results?

- [ ] A Repeating the investigation with different masses
- [ ] B Repeating the readings and calculating averages
- [ ] C Using a motor that works with a higher voltage
- [ ] D Using a shorter piece of string to lift the mass
(ii) Which of these best shows the energy stores as the mass is lifted?

<table>
<thead>
<tr>
<th>kinetic energy of the mass</th>
<th>potential energy of the mass</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ A</td>
<td>constant</td>
</tr>
<tr>
<td>□ B</td>
<td>constant</td>
</tr>
<tr>
<td>□ C</td>
<td>decreasing</td>
</tr>
<tr>
<td>□ D</td>
<td>decreasing</td>
</tr>
</tbody>
</table>

(b) (i) Show that the total energy supplied to the motor in the 9 s is about 170 J.

(ii) During the 9 s the efficiency of the motor is 70%.

Calculate the amount of useful energy transferred in the 9 s.

Use the equation

\[
\text{efficiency} = \frac{\text{useful energy transferred}}{\text{total energy supplied}}
\]

useful energy = \underline{\hspace{2cm}} J
(c) Which row of the table is correct for the resistance of the motor?

<table>
<thead>
<tr>
<th></th>
<th>resistance of motor =</th>
<th>resistance of motor =</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ A</td>
<td>$I \div V$</td>
<td>$I^2 \div P$</td>
</tr>
<tr>
<td>□ B</td>
<td>$V \div I$</td>
<td>$P \div I^2$</td>

<td>$V \div I$</td>
<td>$P \times I^2$</td>
</tr>
<tr>
<td>□ D</td>
<td>$I \times V$</td>
<td>$P \div I^2$</td>
</tr>
</tbody>
</table>

(d) When the motor lifts the mass, the coil in the motor becomes warm.
   Explain why the coil becomes warm.

(Total for Question 5 = 11 marks)
6 (a) Figure 13 shows a tank for holding water.

![Figure 13](image)

The tank has sides of 2.4 m, 2.1 m and 1.5 m.
The pressure at the bottom of the tank is 12 kPa.

(i) State the equation relating pressure, force and area.

(ii) Calculate the weight of water in the tank.

weight = ............................................... N
(iii) Which diagram shows the direction of the forces from the water on the inside of the tank?

- A
- B
- C
- D
(b) A student makes the following hypothesis:

‘When I increase the pressure on a fixed mass of gas, the volume of the gas decreases.’

She has the equipment shown in Figure 14.

She measures the area of the plunger.

Devise a plan to test her hypothesis.

..........................................................................................................................

(Total for Question 6 = 10 marks)
7 (a) Balloon $P$ hangs from an insulating thread.

A teacher gives the balloon a positive electric charge, as shown in Figure 15.

(i) When the balloon is charged like this, it has

- [ ] A gained electrons
- [ ] B lost electrons
- [ ] C gained protons
- [ ] D lost protons

**Figure 15**
(ii) Two more balloons, Q and R, are charged and placed either side of balloon P. The balloons move to the positions shown in Figure 16.

Add the charges on balloons Q and R in Figure 16.
(b) Figure 17 shows an airport worker refuelling an aircraft.

(Source: © Stanisław Tokarski/123RF)

Figure 17

(i) As fuel moves through the pipe, it becomes positively charged.

Explain how the worker can prevent a build-up of charge when pumping fuel into the aircraft.

(3)
(ii) Explain how an aircraft can become electrically charged as it flies through the air.

(ii) The equipment shown in Figure 18 is for investigations in the temperature range from 20°C to 100°C.

State one way the student could develop this experimental procedure to investigate temperatures outside this range.

(c) Fuel weighing 230 000 N is pumped into the aircraft.

This fuel moves upwards through a vertical height of 4.7 m.

The power developed by the pump is 1600 W.

Calculate the time needed to refuel the aircraft.

Time = ...................... s

(Total for Question 7 = 11 marks)
8 A student investigates how the resistance of a thermistor varies with temperature.

(a) The student uses the equipment shown in Figure 18 to measure the temperature of the thermistor.

![Diagram of temperature measurement equipment]

(i) Give one reason for using a water bath.

(1)

(ii) The equipment shown in Figure 18 is for investigations in the temperature range from 20°C to 100°C.

State one way the student could develop this experimental procedure to investigate temperatures outside this range.

(1)
(b) The student takes measurements for two other components, A and B.

The results for both these components are shown in Figure 19.

**Component A**

![Graph of Component A showing a decrease in resistance with temperature.]

**Component B**

![Graph of Component B showing an increase in resistance with temperature.]

**Figure 19**
Compare and contrast how the resistances of component A and component B vary with temperature. (3)

*(c) Describe how the student should carry out an experiment to determine the specific heat capacity of water. (6)

(Total for Question 8 = 11 marks)
A student uses a digital calliper to measure the length of a spring, as shown in Figure 20. The spring is bendy and difficult to measure. The student takes the six readings shown in Figure 21.

(a) Calculate the average length of the spring.

average length = ............................................... mm
A student uses a digital calliper to measure the length of a spring, as shown in Figure 20.

The spring is bendy and difficult to measure.

The student takes the six readings shown in Figure 21.

(a) Calculate the average length of the spring.

\[
\text{average length} = \frac{20.31 + 20.44 + 20.33 + 20.33 + 20.30 + 20.30}{6} \text{ mm}
\]
(b) The student investigates the stretching of a spring with the equipment shown in Figure 22.

The student investigates the extension of the spring using six different weights. The results are shown in Figure 23.

<table>
<thead>
<tr>
<th>weight (N)</th>
<th>extension (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.20</td>
<td>4.0</td>

</tr>
<tr>
<td>1.20</td>
<td>24.0</td>
</tr>
</tbody>
</table>

Figure 22

Figure 23
(i) Draw a graph for the readings, using the grid shown.

(ii) The student writes this conclusion:

‘The extension of the spring is directly proportional to the weight stretching the spring.’

Comment on the student’s conclusion.
(c) The student extends the investigation by finding information about the stretching of wires.

The student finds the graph shown in Figure 24 for the stretching of a wire.

![Graph of load vs. extension](image)

Figure 24

Describe the non-linear stretching of the wire shown in Figure 24.

(Total for Question 9 = 11 marks)
A scuba diver is on a sandy beach.

She checks her compressed air cylinders before a dive.
She has two identical steel cylinders, A and B.
Each cylinder contains the same amount of compressed air.

Figure 25 shows the diver's cylinders.

(a) Explain why cylinder A sinks further into the sand than cylinder B.

Use ideas about pressure, force and area in your answer.

(4)
(b) When underwater, the diver tries to move a large stone block.

The diver uses a long iron bar and a pivot, as shown in Figure 26.

When pushing down with a force of 120 N, the block is balanced.

![Figure 26](image)

Calculate the size of the force, \( F \), of the bar on the block.

\[ \text{force} = \quad \text{N} \]
(c) When the diver is swimming under water, she breathes out bubbles of gas, as shown in Figure 27.

![Diver breathing out bubbles under water](Source: © mihtiander/123RF)

**Figure 27**

The bubbles of gas rise to the surface.
The temperature of the gas does not change.

Explain what happens to a bubble as it rises to the surface.
Your answer should refer to gas equations, kinetic theory and particles.

(Total for Question 10 = 13 marks)
### Equations

\[(\text{final velocity})^2 - (\text{initial velocity})^2 = 2 \times \text{acceleration} \times \text{distance}\]

\[v^2 - u^2 = 2 \times a \times x\]

energy transferred = current \times potential difference \times time

\[E = I \times V \times t\]

potential difference across primary coil \times current in primary coil = potential difference across secondary coil \times current in secondary coil

\[V_p \times I_p = V_s \times I_s\]

change in thermal energy = mass \times specific heat capacity \times change in temperature

\[\Delta Q = m \times c \times \Delta \theta\]

thermal energy for a change of state = mass \times specific latent heat

\[Q = m \times L\]

\[P_1 \times V_1 = P_2 \times V_2\]

to calculate pressure or volume for gases of fixed mass at constant temperature

energy transferred in stretching = 0.5 \times \text{spring constant} \times (\text{extension})^2

\[E = \frac{1}{2}k \times x^2\]

- therefore neutralising the positive charge(s) (1) | accept (copper) wire  
accept earth for ground | (3) |
### Question 7(b)(ii)

**Answer**

An explanation that combines identification – understanding (1 mark) and reasoning/justification – understanding (2 marks):

- There is friction between aircraft and air (1)
- Which causes electron transfer between aircraft and air (1)

**Additional guidance**

- Accept idea of air rubbing against wings
- Ignore “charge” “static”
- Do not allow (for second mark) idea of protons moving

**Mark** (2)

### Question 7(c)

**Answer**

Equating energy in both equations (1)

\[ E = \text{weight} \times \text{height} = \text{power} \times \text{time} \]

Rearrangement (1)

\[ \text{time} = \frac{(\text{weight} \times \text{height})}{\text{power}} \]

Substitution and answer (1)

\[ \text{time} = 230,000 \times \frac{4.7}{1600} \]

\[ \text{time} = 680 \text{ (s)} \]

**Additional guidance**

- Allow answers which round to 680, e.g. 675.6

**Mark** (3)

### Question 8(a)(i)

**Answer**

Any one reason from:

- The thermistor and the water are at the same temperature (1)
- Large volume of water gives a steady temperature rise (1)

**Additional guidance**

- Accept idea that only small part of thermometer would be in contact with a thermistor in air
- Accept difficult to control change in temperature of thermistor when heated in air

**Mark** (1)
### Question number 8(a)(ii)

**Answer**

Any one of the following developments to the procedure:
- add ice to increase lower limit of temperature range (1)
- use liquid with higher boiling point to increase upper limit of temperature range (1)

**Additional guidance**

accept named liquid with higher boiling point, e.g. oil

**Mark**

1

### Question number 8(b)

**Answer**

A comparison and contrast that must include at least one similarity and one difference from the following points to a maximum of three marks:

**Similarities**

- resistance of both changes with temperature (1)
- both graphs show a non-linear relationship (1)
- data comparison, e.g. both have the same resistance at 80 °C (1)

**Differences**

- resistance of A decreases with temperature but resistance of B increases with temperature (1)
- for A, (largest slope/rate of change) is at lower temperature but for B, (largest slope/rate of change) is at higher temperature(s) (1)
- for B, resistance is constant below 50 °C but for A resistance is roughly constant above 60 °C (1)

**Additional guidance**

accept (smallest slope/rate of change) for A is at higher temperature but (smallest slope/rate of change) for B is at lower temperature

**Mark**

3
### Question number

**8(c)**

### Indicative content

Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme.

The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant.

**AO1 (6 marks)**

- Use of top pan balance to measure mass
- Insulate beaker to reduce heat loss
- Ammeter connected in series with heater
- Voltmeter connected in parallel with heater
- Use of \( E = I \times V \times t \) to determine energy supplied to the water
- Accept use of joule-meter to measure energy supplied
- Use of \( \Delta E = m \times c \times \Delta \theta \) to determine the specific heat capacity of the water
- Measure p.d. across heater
- Use stopwatch to measure time liquid is heating
- Measure current in heater
- Determine mass of water as mass of (beaker and water) – mass of beaker
- Measure temperature before and after heating

## Question number | Indicative content | Mark
---|---|---
*10(c) | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant. **AO2 (6 marks)** | (6)
- The bubbles get bigger
- Molecules of gas in constant motion
- Molecules widely spaced and moving randomly
- Molecules impact on surface of bubble/liquid molecules
- Average of impacts produces gas pressure
- Pressure is due to rate at which gas particles collide with liquid molecules/bubble surface
- Liquid pressure decreases as bubble rises
- \[ P_1V_1 = P_2V_2 \]
- If pressure decreases, volume of bubble will increase/volume of bubble must increase to give a decrease in pressure
- As volume increases, rate at which particles collide with surface of bubble decreases

## Level | Mark | Descriptor
---|---|---
0 | No awardable content. |  
Level 1 | 1–2 | The explanation attempts to link and apply knowledge and understanding of scientific ideas, flawed or simplistic connections made between elements in the context of the question. (AO2) Lines of reasoning are unsupported or unclear. (AO2) |
Level 2 | 3–4 | The explanation is mostly supported through linkage and application of knowledge and understanding of scientific ideas, some logical connections made between elements in the context of the question. (AO2) Lines of reasoning mostly supported through the application of relevant evidence. (AO2) |
Level 3 | 5–6 | The explanation is supported throughout by linkage and application of knowledge and understanding of scientific ideas, logical connections made between elements in the context of the question. (AO2) Lines of reasoning are supported by sustained application of relevant evidence. (AO2) |
Instructions

- Use **black** ink or ball-point pen.
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided – there may be more space than you need.
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must show all your working out with your answer clearly identified at the end of your solution.

Information

- The total mark for this paper is 100.
- The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.
- In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
1 There are many different types of waves.

(a) Waves on the surface of water are transverse waves.

Sound waves are longitudinal waves.

Describe the difference between transverse waves and longitudinal waves.

(b) Figure 1 shows a ripple tank.

This is used to study the behaviour of water waves.

Figure 1

- support
- light source
- water
- wooden bar supported by elastic bands
- screen
- 80 cm
Water waves are produced in the tank.
The shadow of the waves is projected onto the screen below the tank.
The waves appear to move in the direction of the arrow.

(i) Describe how to determine the frequency of the waves.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(ii) The screen is 80 cm long.

What is the approximate wavelength of the waves as seen on the screen?

☐ A  4 cm
☐ B  8 cm
☐ C  40 cm
☐ D  80 cm

(iii) A student uses the image to estimate the speed of the water wave as 75 cm/s.

Which of these is a reason why the estimate is not correct?

☐ A  the student used a ruler without mm markings
☐ B  the light was not bright enough
☐ C  the student’s measurement was inaccurate
☐ D  the wave seen on the screen is magnified

(Total for Question 1 = 6 marks)
2  (a) Scientists no longer accept the geocentric model of the universe but it was the accepted theory for hundreds of years.
   Explain why the evidence available at the time supported the geocentric model. (3)
   
   (b) The Big Bang theory and the Steady State theory are two theories about the origin of the universe.
   The discovery of CMB led scientists to accept only one of the theories.
   Explain why red shift supports both theories but CMB supports only one of them. (3)
(c) (i) A star with a mass very much larger than the Sun

☐ A has a longer main sequence than the Sun and ends as a white dwarf

☐ B has a longer main sequence than the Sun and ends as a black hole

☐ C has a shorter main sequence than the Sun and ends as a white dwarf

☐ D has a shorter main sequence than the Sun and ends as a black hole

(ii) Which row has two correct statements about black holes?

<table>
<thead>
<tr>
<th>the gravitational field of a black hole</th>
<th>a black hole is formed when</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐ A allows only electromagnetic radiation to escape</td>
<td>a nebula collapses</td>
</tr>
<tr>
<td>☐ B allows nothing to escape</td>
<td>a very large star collapses</td>
</tr>
<tr>
<td>☐ C allows nothing to escape</td>
<td>a nebula collapses</td>
</tr>
<tr>
<td>☐ D allows only electromagnetic radiation to escape</td>
<td>a very large star collapses</td>
</tr>
</tbody>
</table>

(Total for Question 2 = 8 marks)
3 (a) Figure 2 shows some lines in the absorption spectra from four different galaxies (A, B, C, and D) and from a laboratory source.

All the spectra are aligned and to the same scale.

![Diagram of absorption spectra]

**Figure 2**

(i) Explain, using Figure 2, which galaxy is furthest away from us.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(ii) In Figure 2, the reference wavelength, \( \lambda_0 \), is shown at 390 nm. Estimate the change in the reference wavelength, \( \Delta \lambda \), for the light from galaxy D.

\[
\Delta \lambda = ..................................................... \text{ nm}
\]

(iii) Calculate the speed, \( v \), of galaxy D.

Use the equation

\[
\Delta \lambda / \lambda_0 = v / c
\]

\( c = \text{speed of light} = 3 \times 10^8 \text{ m/s} \)

\[
(2) \quad v = ..................................................... \text{ m/s}
\]
(ii) In Figure 2, the reference wavelength, $\lambda_0$, is shown at 390 nm.

Estimate the change in the reference wavelength, $\Delta \lambda$, for the light from galaxy D.

\[
\Delta \lambda = \text{nm}
\]

(iii) Calculate the speed, $v$, of galaxy D.

Use the equation

\[
v = c \frac{\Delta \lambda}{\lambda_0}
\]

$[c = \text{speed of light} = 3 \times 10^8 \text{ m/s}]$

\[
v = \text{m/s}
\]
(b) Figure 3 shows a photograph of galaxy D.

This photograph was taken by a student at his home.

Figure 3

State two ways that the student can improve the observational techniques so that the quality of the image is improved.

1 .................................................................

2 .................................................................

(Total for Question 3 = 8 marks)
Figure 4 shows two students investigating their reaction times.

Student B supports his left hand on a desk.

Student A holds a ruler so that the bottom end of the ruler is between the finger and thumb of student B.

When student A releases the ruler, student B catches the ruler as quickly as he can.

The investigation is repeated with the right hand of student B.
(a) The students took five results for the left hand and five results for the right hand.

Figure 5 shows their results.

<table>
<thead>
<tr>
<th>which hand</th>
<th>distance dropped (cm)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>trial 1</td>
</tr>
<tr>
<td>left</td>
<td>10.1</td>
</tr>
<tr>
<td>right</td>
<td>17.5</td>
</tr>
</tbody>
</table>

**Figure 5**

(i) Calculate the average distance dropped for the right hand.

Give your answer correct to 2 significant figures.

\[
\text{distance} = \text{............................................... cm}
\]

(ii) Calculate the average time for the left hand.

Use the equation

\[
\text{time}^2 = \frac{\text{distance}}{500}
\]

Give your answer correct to 2 significant figures.

\[
\text{average time} = \text{......................................... s}
\]
(b) Explain whether any of the readings are anomalous.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(c) Give two ways that the students can improve the quality of their data other than ignoring anomalous results.

1 ...........................................................................................................................
..........................................................................................................................
2 ...........................................................................................................................
..........................................................................................................................

(d) Describe how the students could develop their investigation to investigate how reaction time changes with another variable.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(Total for Question 4 = 10 marks)
5 (a) A car accelerates at a constant rate of 1.83 m/s² along a flat straight road. The force acting on the car is 1.870 kN. Calculate the mass of the car. Give your answer to three significant figures.

\[
\text{mass} = \quad \text{kg}
\]

(b) The car accelerates from rest for 16 s. Calculate the speed of the car after 16 s.

\[
\text{speed} = \quad \text{m/s}
\]
(c) The car starts on another journey.

Figure 6 shows the graph of the car’s movement.

Show that the distance travelled when the car is moving at a constant speed is greater than the distance travelled when the car is slowing down.

(Total for Question 5 = 10 marks)
6 Figure 7 shows the nuclei of four atoms.

![Nuclei of Uranium, Plutonium, and Americium](image)

(a) Which two nuclei have the same number of neutrons?

- A plutonium-238 and uranium-235
- B uranium-235 and americium-238
- C uranium-234 and americium-238
- D americium-238 and plutonium-238

(b) (i) State what is meant by the term ‘half-life’.

(ii) Plutonium-238 is used in spacecraft to provide heat to power generators.

One of these generators contains 925 g of plutonium-238 when it is manufactured.

One gram of plutonium-238 has a power density of 0.54 W/g.

Plutonium-238 has a half-life of 87.7 years.

Calculate the average energy released per second by the generator after 263 years.

\[
\text{average energy released per second} = \frac{925 \times 0.54}{263} \text{ W/g \times g} = \text{J/sec}
\]
(c) The nucleus of americium-238 can absorb an electron.

When this happens, one of the protons in the nucleus becomes a neutron, as shown in Figure 8.

\[
\begin{array}{ccc}
 p & + & e \\
 1 & -1 & 0 \\
\end{array}
\rightarrow
\begin{array}{c}
 n \\
 1 & 0 \\
\end{array}
\]

**Figure 8**

(i) Describe how absorbing an electron affects the proton number and the nucleon number of a nucleus.

(ii) Deduce which nucleus is formed when americium-238 absorbs an electron.

- A  uranium-234
- B  uranium-235
- C  plutonium-238
- D  americium-238

(Total for Question 6 = 9 marks)
7 A student investigates how the average speed of the trolley varies with starting height.

Figure 9 shows the trolley and runway.

![Figure 9](image)

(a) Describe how the student can determine the average speed of the trolley.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
(b) Figure 10 shows his results.

<table>
<thead>
<tr>
<th>starting height / m</th>

</tr>
<tr>
<td>0.18</td>
<td>0.94</td>
</tr>
</tbody>
</table>

Figure 10

Figure 11 shows the student’s graph.

Figure 11
(i) The trolley has a mass of 650 g.

Calculate the average kinetic energy of the trolley which had a starting height of 0.075 m.

\[
\text{average kinetic energy} = \]

(ii) Determine the gradient of the graph when the height is 0.1 m.

\[
\text{gradient} =
\]

(iii) Describe how the speed of the trolley varies with the changes in height made by the student between 0.04 m and 0.12 m.
(c) The student wants to change his experiment to investigate how different surfaces of the runway affect the speed of the trolley down the slope.

Devise an experiment that would allow him to investigate the effect of different surfaces on the average speed of the trolley.

(Total for Question 7 = 13 marks)
8 (a) All objects emit electromagnetic radiation.

The intensity and wavelength of the emitted radiation vary with the temperature of the object.

Figure 12 shows this variation for a filament lamp at two different temperatures. The visible region of the electromagnetic spectrum is also shown.

![Figure 12](image)

(i) Explain why a filament lamp appears brighter and less red as its temperature increases.

(ii) The intensity of gamma radiation can be measured using a Geiger-Müller tube and counter.

The count rate recorded by the counter tube depends on how far away the Geiger-Müller tube is from the gamma radiation source.

The equation relating count rate to distance from the source is

\[
\text{count rate} = \frac{k}{d^2}
\]

where \( d \) is the distance from the source and \( k \) is a constant.

A Geiger-Müller tube is placed 0.70 m from a source of gamma radiation. The counter displays a count rate of 85 000 count per minute.

Calculate the count rate recorded when the Geiger-Müller tube is placed 1.3 m away from the same gamma radiation source.

\[
\text{count rate} = \quad \text{counts per minute}
\]
*(b) Sulfates and black soot are particles formed by industrial processes.

Some of these particles are found in the atmosphere over the Arctic Ocean.

The sulfates stay in the atmosphere and reflect (scatter) sunlight.

The black soot falls onto the Arctic ice.

Discuss how a reduction in these industrial processes is likely to affect the temperature of the atmosphere.

(Total for Question 8 = 13 marks)
9 (a) Explain what happens to the wavelength of light when it passes from air into glass.

(c) The distance between the Earth and the Sun is $1.50 \times 10^{11}$ m.

Light takes 500 s to travel from the Sun to the Earth.

The wavelength of red light is 670 nm.

Calculate the frequency of red light, using only the data provided.

$\text{frequency} = \frac{\text{distance}}{\text{time}} = \frac{1.50 \times 10^{11} \text{ m}}{500 \text{ s}} = \frac{1.50 \times 10^{11}}{500} \text{ Hz}$

$(\text{Total for Question 9} = 12 \text{ marks})$
10 In a nuclear reactor, a chain reaction is produced and controlled.

(a) (i) Uranium-235 is the isotope used in many nuclear reactors.

Explain how the fission of uranium-235 can lead to a chain reaction.

(ii) Nuclei of beryllium-9 do not absorb neutrons.

Instead, nuclei of beryllium-9 absorb alpha particles and emit neutrons.

Give a reason why a chain reaction can result from the emission of neutrons by uranium nuclei but not by beryllium nuclei.

(b) Explain what happen inside a nuclear reactor if neutron speeds are not controlled.
(c) Describe how the energy released in the chain reaction in a nuclear reactor is used to drive a turbine in a nuclear power station.

(Total for Question 10 = 11 marks)

TOTAL FOR PAPER = 100 MARKS
Equations

\[(\text{final velocity})^2 - (\text{initial velocity})^2 = 2 \times \text{acceleration} \times \text{distance}\]

\[v^2 - u^2 = 2a\times x\]

force = change in momentum ÷ time

\[F = \frac{(mv - mu)}{t}\]

energy transferred = current × potential difference × time

\[E = I \times V \times t\]

force on a conductor at right angles to a magnetic field carrying a current = magnetic flux density × current × length

\[F = B \times I \times l\]

\[\frac{\text{voltage across primary coil}}{\text{voltage across secondary coil}} = \frac{\text{number of turns in primary coil}}{\text{number of turns in secondary coil}}\]

\[\frac{V_p}{V_s} = \frac{N_p}{N_s}\]

potential difference across primary coil × current in primary coil = potential difference across secondary coil × current in secondary coil

\[V_p \times I_p = V_s \times I_s\]

change in thermal energy = mass × specific heat capacity × change in temperature

\[\Delta Q = m \times c \times \Delta \theta\]

thermal energy for a change of state = mass × specific latent heat

\[Q = m \times L\]

\[P_1 \times V_1 = P_2 \times V_2\]

to calculate pressure or volume for gases of fixed mass at constant temperature

energy transferred in stretching = 0.5 × spring constant × (extension)^2

\[E = \frac{1}{2} \times k \times x^2\]

pressure due to a column of liquid = height of column × density of liquid × gravitational field strength

\[P = h \times \rho \times g\]

• and the wave velocity reduces at the boundary but the frequency remains the same (1)  
allow the same number of waves per second arrive at the boundary as leave it for no change in frequency at the boundary | (2) |
Question number | Indicative content | Mark
--- | --- | ---
9(b) | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant. | (6)

### AO1 (6 marks)

- point A reaches the glass block before point B
- A moves into the glass block and slows down as light travels more slowly in glass than in air
- B is still in air so is travelling faster than A
- this causes part of the wavefront to change direction/refract
- by the time B reaches the block it will have travelled further than A
- therefore, the whole wavefront changes direction/refracts towards the normal
- at the other face, A exits first so the process is reversed
- the wavefront changes direction again so it is parallel to its original direction/refracts away from the normal

### Question number 9(c)

**Answer**

Substitution into \( v = \frac{s}{t} \) to find \( v \) (1)

\[
v = \frac{1.5 \times 10^{11}}{500} \quad \text{Substitution into } v = f \times \lambda \text{ and unit conversion (1)}
\]

\[
v = \frac{1.5 \times 10^{11}}{500} = f \times 670 \times 10^{-9} \quad \text{Transposition (1) Rearrangement (1)}
\]

\[
f = \frac{1.5 \times 10^{11}}{500 \times (670 \times 10^{-9})}
\]

**Answer** (1)

\( 4.5 \times 10^{14} \text{ (Hz)} \)

**Additional guidance**

- \( s \) is distance
- Award full marks for correct numerical answer without working
- Maximum 3 marks if \( \lambda \) in nm

**Mark** (4)

### Question number 10(a)(i)

**Answer**

An explanation that combines identification – knowledge (1 mark) and reasoning/justification – knowledge (3 marks):

- causes 2 or 3 neutrons to be released (1)
- (and) one or more of these (released) neutrons are absorbed by other (U) nuclei (1)
- which cause further fission of U nuclei (1)
- and release further neutrons that can be absorbed, causing a chain reaction (1)

**Additional guidance**

- Ignore U nucleus ‘splits up’

**Mark** (4)

### Question number 10(a)(ii)

**Answer**

Idea that to get a chain reaction the particle that impacts the nucleus must be the same as the one released (1)

**Mark** (1)
10(b) An explanation that combines identification – knowledge (1 mark) and reasoning/justification – knowledge (2 marks):

- reaction will slow down (1)
- because there are fewer fissions (1)
- because fission more likely with slow neutrons (1)

Additional guidance: allow reactor shuts down/eq fission requires slow neutrons thermal neutrons for slow neutrons

Mark: 3

10(c) An answer that combines the following points of understanding to provide a logical description:

- the reactor is surrounded by a coolant (1)
- the thermal energy release from the chain reaction heats the coolant (1)
- the hot coolant is used to generate steam which is used to drive the turbine (1)

Mark: 3
Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided – there may be more space than you need.
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with your answer clearly identified at the end of your solution.

Information

- The total mark for this paper is 100.
- The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.
- In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
1 Figure 1 shows part of a roller coaster ride seen from the side.

(a) The roller coaster car rolls down towards P. The car has mass, \( m \) kg and velocity \( v \) m/s.

Which of these is the correct equation for calculating the kinetic energy of the car?

\[ \square \text{ A } KE = mv \]
\[ \square \text{ B } KE = mv^2 \]
\[ \square \text{ C } KE = \frac{1}{2}mv^2 \]
\[ \square \text{ D } KE = 2mv^2 \]
(b) The mass of the car is 580 kg.

The car gains 39 000 J of gravitational potential energy as it climbs from P to Q.

(i) State the equation relating change in gravitational potential energy, mass, gravitational field strength and change in vertical height.

\[ (1) \]

(ii) Calculate the height \( h \), shown in Figure 1.

(gravitational field strength, \( g = 10 \text{ N/kg} \))

\[ (3) \]

\[ h = \text{________________________ m} \]

(c) The car enters a pool of water at R. It slows down and stops at S.

Describe how the total energy of the system is conserved as the car travels between R and S.

\[ (2) \]

(Total for Question 1 = 7 marks)
(a) Figure 2 shows a tank for holding water. The tank has sides of 2.4 m, 2.1 m and 1.5 m.

The pressure at the bottom of the tank is 12 kPa.

(i) State the equation relating pressure, force and area.

(ii) Calculate the weight of water in the tank.

weight = ...............................................  N
2 (a) Figure 2 shows a tank for holding water.

The tank has sides of 2.4 m, 2.1 m and 1.5 m.

The pressure at the bottom of the tank is 12 kPa.

(i) State the equation relating pressure, force and area.

(ii) Calculate the weight of water in the tank.

weight = ............................................... N
(iii) Which diagram shows the direction of the forces from the water on the inside of the tank?

(b) Figure 3 shows three containers A, B, and C.

Each container contains a liquid, as shown.

Figure 4 gives some data about the liquids and containers.

<table>
<thead>
<tr>

Explain which container has the highest pressure at the bottom, and which container has the lowest.

Use information from Figure 3 and Figure 4.

(Total for Question 2 = 9 marks)
3 A student investigates how the resistance of a thermistor varies with temperature.

(a) The student sets up the circuit shown in Figure 5 to measure current and voltage.

He finds that it does not work.

![Figure 5](image)

Give three modifications the student should make to the circuit so that the circuit works correctly.

1. 
2. 
3. 

(i) Give one reason for using the water bath.

(ii) The equipment shown in Figure 6 is for investigations in the temperature range from 20°C to 100°C.

State one way the student could develop this experimental procedure to investigate temperatures outside this range.
(b) The student uses the equipment shown in Figure 6 to measure the temperature of the thermistor.

![Diagram of equipment with labels: thermometer, water bath, wires to circuit, stirrer, heater, thermistor, wires to circuit]

Figure 6

(i) Give one reason for using the water bath.

.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................

(ii) The equipment shown in Figure 6 is for investigations in the temperature range from 20°C to 100°C.

State one way the student could develop this experimental procedure to investigate temperatures outside this range.

.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
(c) The student takes measurements for two other components, A and B.

The results for both these components are shown in Figure 7.

Component A

Component B

Figure 7
(i) Compare and contrast how the resistances of component A and component B vary with temperature.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(ii) Component A is connected to a 12V supply.

Which of these is the current in component A when the temperature is 80°C?

(1)

☐ A  \( I = 12 \times 5000 \)

☐ B  \( I = \frac{12}{5000} \)

☐ C  \( I = \frac{12^2}{5000} \)

☐ D  \( I = \sqrt{\frac{12}{5000}} \)

(Total for Question 3 = 9 marks)
4 (a) Figure 8 shows an airport worker refuelling an aircraft.

![Figure 8](Source: © Stanisław Tokarski/123RF)

(i) Pumping fuel into an aircraft can be dangerous.
   The worker connects an earth wire to the aircraft before pumping fuel.
   Give one reason why earthing reduces the risk of fire.

   (1)

(ii) Explain how an aircraft can become electrically charged as it flies through the air.

   (2)
(b) Fuel weighing 230 000 N is pumped into the aircraft.

This fuel moves upwards through a vertical height of 4.7 m.

The power developed by the pump is 1600 W.

Calculate the time needed to refuel the aircraft.

\[ \text{time} = \frac{\text{work}}{\text{power}} = \frac{\text{weight} \times \text{height}}{\text{power}} \]

\[ \text{time} = \frac{230 \times 10^3 \text{ N} \times 4.7 \text{ m}}{1600 \text{ W}} = \frac{1.081 \times 10^5 \text{ J}}{1600 \text{ W}} = 67.56 \text{ s} \]
(c) Figure 9 shows an electrostatic method for spray-painting a car door.

The car door has a negative charge.

The droplets of paint receive a positive charge as they leave the spray gun.

![Figure 9](Source: © Jens Brüggemann/123RF)

**Figure 9**

Explain how charging the door helps the paint to form an even coating on both sides of the door.

You should use ideas of forces and fields in your answer.

(2)

(Total for Question 4 = 8 marks)
A student uses a digital calliper to measure the length of a spring, as shown in Figure 10.

![Digital Calliper](image)

**Figure 10**

The spring is bendy and difficult to measure.

The student takes the six readings shown in Figure 11.

- mm 20.31 mm 20.33
- mm 20.44 mm 20.30
- mm 20.33 mm 20.30

**Figure 11**

(a) Calculate the average length of the spring.

\[
\text{average length} = \frac{20.31 + 20.33 + 20.44 + 20.33 + 20.30 + 20.30}{6} \text{ mm}
\]

(2)
(b) The student investigates the stretching of a spring with the equipment shown in Figure 12.

The student investigates the extension of the spring using six different weights. The results are shown in Figure 13.

<table>
<thead>
<tr>
<th>weight (N)</th>

(Total for Question 5 = 11 marks)
6 Wooden trucks on a toy railway have permanent magnets that hold the train together.

The magnets are arranged so that an N-pole touches an S-pole between each truck, as shown in Figure 15.

![Figure 15](image)

(a) Truck Y is removed from the train, turned through 180° and is then replaced between truck X and Z.

How does this affect the train?

- [ ] A Y attracts both X and Z as before
- [ ] B Y still attracts X but now repels Z
- [ ] C Y still attracts Z but now repels X
- [ ] D Y now repels both X and Z
(b) The structure of a truck, seen from above, is shown in Figure 16.

The permanent magnets cause a magnetic field both inside and outside the truck.

![Diagram of truck with permanent magnet]

Figure 16

Which of these correctly shows the field inside the truck?

- [ ] A
- [ ] B
- [ ] C
- [ ] D

(1)
(c) A student investigates the forces between the trucks in the toy railway.

She places another truck, W, next to truck X.

She pulls truck Z in the direction shown by the arrow.

The whole train travels at a constant speed as shown in Figure 17.

![Figure 17]

The student repeats this method of adding trucks and pulling the train each time.

When there are seven trucks in total, the train comes apart between Y and Z when tested as shown in Figure 18.

![Figure 18]

(i) Explain why the train acts in this way by considering the forces involved.

(2)
(ii) Devise an experiment to investigate the horizontal force needed to separate the trucks from the engine.

(iii) Explain why a larger force is needed to separate the trucks from the engine if the force is applied at an angle to the horizontal.

(Total for Question 6 = 9 marks)
7  (a) A straight piece of wire is 0.713 m long.

It is placed at right angles to a uniform magnetic field of 0.47 T.

The force on the wire is 0.089 N.

Calculate the current in the wire.

Use an equation from the formula sheet. Give your answer to an appropriate number of significant figures.

\[
\text{current} = \quad \text{A}
\]
(b) A student investigates the relationship between the magnetic flux density and the electromagnetic force on a current-carrying wire.

The student has the equipment shown in Figure 19.

The student varies the number of magnets and measures the force on the wire using the force meter.

The results are shown in Figure 20.

<table>

</table>

Figure 20
The student decides that his equipment is not sufficiently sensitive.

Give **three** ways the student should develop his investigation to improve the quality of his results.

1. 
2. 
3. 

(c) Figures 21 and 22 show different voltages that can be applied across a wire.

![Figure 21](image)

![Figure 22](image)

Explain which of the voltages in Figures 21 and 22 cause an a.c. current in the wire.
(d) A power transmission wire hangs so that it is at right angles to the Earth’s magnetic field.

Although this magnetic field is constant, the cable experiences a changing force.

Explain why the force experienced by the cable changes.

(Total for Question 7 = 11 marks)
Figure 23 shows an electric car connected to a battery charger.

The car has a rechargeable battery to drive its motor.

The rechargeable battery provides a potential difference of 330 V and can store up to 64 MJ.

It takes 8 hours for the battery to receive a full charge.

Assume that the charging process is 100% efficient.

(a) Calculate the total charge that flows while the battery is being charged.

\[
\text{total charge} = \text{............................................... C}
\]
(b) Calculate the average charging current.

\[ \text{current} = \ldots\ldots\ldots\ldots A \]
*(c) The battery charger shown in Figure 23 is connected to the 230 V a.c. domestic mains supply.

The output voltage of the charger is 335 V and it provides a d.c. charging current. Charging stops if the charging current exceeds 15 A.

Explain how electrical components in the charger can be connected together to give this type of output.

(Total for Question 8 = 12 marks)
9 Figure 24 shows a submarine underwater.

![Figure 24](image)

The motor in the submarine turns the gear wheels shown in Figure 25.

![Figure 25](image)

(a) Gear wheel A rotates clockwise through one complete turn.

Which of these is correct for gear wheel B?

<table>
<thead>
<tr>
<th>amount that gear wheel B rotates</th>
<th>direction gear wheel B rotates</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ A 1½ turns</td>
<td>clockwise</td>
</tr>
<tr>
<td>□ B 1½ turns</td>
<td>anticlockwise</td>
</tr>
<tr>
<td>□ C ⅔ of a turn</td>
<td>clockwise</td>
</tr>
<tr>
<td>□ D ⅔ of a turn</td>
<td>anticlockwise</td>
</tr>
</tbody>
</table>
(b) A bubble of gas escapes from the submarine.

The volume of the bubble is 23.0 cm³.

The pressure of the gas inside the bubble is 297 kPa.

The bubble rises to the surface without changing temperature.

Calculate the volume of the bubble when it reaches the surface.

Atmospheric pressure = 101 kPa

Use an equation from the formula sheet.

\[
\text{volume} = \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \text{cm}^3
\]
(c) A student is interested in the way that submarines are controlled.

She has several regular wooden blocks, a set of weights and a tank of water. Wood floats in water.

The student plans to immerse the wooden blocks fully in the water and investigate the relationship between the upthrust and the weight of water displaced.

Describe how she should determine one of the variables in this investigation.

(2)
*(d) Figure 26 shows the submarine stationary and submerged at a depth of 10 m.

![Diagram of a submarine with a buoyancy tank and water in it.]

Explain how pumping water into and out of the buoyancy tank affects the depth of the submarine below the surface.

(Total for Question 9 = 12 marks)
The espresso machine shown in Figure 27 is an electrical appliance.

Figure 27

(a) The espresso machine has an electrical heater connected to a 440V mains supply. The power of the electrical heater is 3.5 kW.

(i) The rating of a fuse is the current above which it melts. Which of these is the most suitable fuse for the espresso machine circuit?

- A 1 A
- B 5 A
- C 10 A
- D 13 A

(ii) Before the espresso machine can be used, its heater must raise the temperature of some cold water. The specific heat capacity of water is 4200 J/kg K. Show that it takes the heater about 90 s to raise the temperature of 1 kg of water from 18 °C to 95 °C. Use an equation from the formula sheet.
(ii) Before the espresso machine can be used, its heater must raise the temperature of some cold water.

The specific heat capacity of water is $4200 \text{ J/kg K}$. 

Show that it takes the heater about 90 s to raise the temperature of 1 kg of water from 18 °C to 95 °C. 

Use an equation from the formula sheet.
(ii) The specific heat capacity of milk is 3840 J/kg K.
The specific heat capacity of water is 4200 J/kg K.
The specific latent heat of condensation of steam is 2260 kJ/kg.
The temperature of the steam is 100 °C.
The mass of steam that condenses is 25 g.
The temperature of the milk rises from 5 °C to 65 °C.

By considering the transfer of energy from the steam to the milk, calculate the mass of milk that is heated by the steam and hot water.

Use equations from the formula sheet.

\[
\text{mass of milk} = \frac{\text{mass of steam} \times \text{specific latent heat}}{\text{specific heat capacity of milk} \times (\text{final temperature} - \text{initial temperature})} \\
\]

(iii) Give two reasons why the actual mass of steam needed to heat the milk from 5 °C to 65 °C is greater than 25 g.

1 ... ..........................................................................................................................
2 ... ..........................................................................................................................

(b) The espresso machine has a steam pipe that can be used to heat milk in a jug, as shown in Figure 28.

(Source: © Wavebreak Media Ltd/123RF)

Figure 28

Steam from the pipe enters the milk, where steam condenses to water.
The steam and hot water heat the milk.

(i) Describe, in terms of energy, how the arrangement and movement of particles in the steam changes as the steam enters the milk, condenses and cools.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(2)
(ii) The specific heat capacity of milk is 3840 J/kg K.
The specific heat capacity of water is 4200 J/kg K.
The specific latent heat of condensation of steam is 2260 kJ/kg.
The temperature of the steam is 100°C
The mass of steam that condenses is 25 g.
The temperature of the milk rises from 5°C to 65°C.
By considering the transfer of energy from the steam to the milk, calculate the mass of milk that is heated by the steam and hot water.
Use equations from the formula sheet.

\[
\text{mass of milk} = \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots
\]

(iii) Give **two** reasons why the actual mass of steam needed to heat the milk from 5°C to 65°C is greater than 25 g.

1. ..........................................................................................................................
2. ..........................................................................................................................

---|---|---
*8(c) | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant.  
**AO1 (6 marks)**  
- the sequence of events is voltage change, conversion to direct current, followed by current limiting  
- the battery is the load in the secondary circuit, not a store of energy for the primary circuit  
- a transformer is needed to increase (or step up) the voltage  
- so a diode is needed to change a.c. to d.c.  
- the charging current can be limited to 15 A using a fuse (or circuit breaker)  
- a circuit breaker may be preferable to a fuse, since a fuse would need to be replaced after use  
- the transformer primary coil is connected between the live and neutral in the primary circuit  
- the diode is connected in the secondary circuit of the transformer  
- the battery (which is to be charged), diode, fuse and secondary coil should be connected in series in the secondary circuit | (6)

| 9(c)            | An answer that combines the following points to provide a logical description of the plan:  
EITHER  
• (determine upthrust) by adding weights until the block of wood is fully immersed and recording the load required (1)  
• calculate upthrust by adding load and weight of block (1)  
OR  
• (determine the weight of water displaced) by using a ruler to measure the dimensions of the block and multiplying them together to find the volume (1)  
• calculate the weight of water from volume × density × g (1) | (2)  |

</tbody>
</table>

**AO1 (3 marks)**
- upthrust is the force on the submarine in the water (submerged) in a fluid
- upthrust on the submarine and its weight act in opposite directions
- upthrust is equal to the weight of water displaced by the submarine
- the difference in pressures on the upper and lower surfaces of the submarine causes the upthrust

**AO2 (3 marks)**
- the volume of the submarine is fixed so the upthrust on the submarine is constant
- increasing/decreasing volume of water in tanks increases/decreases weight of submarine but does not affect upthrust
- if weight increases to become greater than upthrust there is a resultant downward force on the submarine so the submarine sinks
- if weight decreases to become less than upthrust there is a resultant upward force on the submarine so the submarine rises
