Pearson Edexcel
International Advanced Level
Guide for International Schools
Opening doors to the world’s best universities

Pearson Edexcel International Advanced Levels (IALs) are designed for the global learner and have been developed in consultation with the international school community, including a large number of teachers and university lecturers.

Available in 21 popular subjects, they offer progression from International GCSEs, engaging international learners, and equipping them for progression to university and employment.

They have a flexible, modular structure, but maintain the rigorous standards of all Pearson Edexcel qualifications and are comparable to the linear UK A Level, as confirmed by UK NARIC (The national agency responsible for providing information and expert opinion on qualifications and skills worldwide).

Qualifications designed for the international learner

At Pearson Edexcel, we develop our examination papers over a two year period. The papers go through a rigorous world class assessment design process, which ensures that the content is relevant for international learners, and that there is a clear and consistent relationship between command words, marks and skills. With logical progression of difficulty throughout and consistency in template and design, our question papers are clear and provide suitable challenge and support for students of all abilities.

IAL qualifications are not available in the UK, the Channel Islands, the Isle of Man or in British Armed Forces schools overseas.

“I wanted to study subjects that were relevant to a future career. Pearson Edexcel iAL provides learners with a firm knowledge base.”

Nasim Mirzajani, now studying Chemical Engineering at Yale University, USA

Why is the modular approach so popular?

Pearson Edexcel offer the most modular International Advanced Levels. The modular approach is popular as, unlike the linear approach, it means that exams are taken at the end of each unit. This gives students more flexibility to take exams at the right time for them.

The modular structure includes a synoptic approach to assessment, which means learners are examined on their learning from each unit and are also able to demonstrate their knowledge and understanding across the whole subject.

Multiple examination opportunities are available in January, June and October in most subjects. As exams are spread throughout the course, revision is broken down into unit-sized chunks, and there are less ‘all-or-nothing’ exam periods, enabling learners to focus their revision on fewer exams at a time.

Students of modular International A Levels also benefit from more exam practice and familiarity, and get to build their understanding of the standards expected of them. They also have the option to retake, so students have more opportunity for overall success.

Exam results provide formal feedback earlier on in their studies, so learners understand the standard required to reach the final level of achievement they are aiming for. This understanding motivates them to improve, and builds a sense of ownership through bite-size, short-term goals.

Our International AS qualifications can be taken separately or used as a stage on the way to completing an Advanced Level.
Progress to University

Pearson Edexcel sets the standard for worldwide recognised qualifications aligned to the British educational system and accepted by top universities across the world - including Oxford, Cambridge, Columbia University and Yale University - leading on to prestigious employment opportunities. Our qualifications are taken by over 100,000 students in over 80 countries each year.

IAL and A Level comparability

A Level qualifications were updated in 2015 following changes introduced by the UK Government. Our IALs were launched in 2014 with a modular structure.

In November 2017, UK NARIC\(^1\) independently assessed our IALs and confirmed that they continue to meet the UK A Level standard. IALs are only available to students outside of the UK.

Did you know that your students could be benefiting from extra UCAS points to secure offers from more prestigious universities?

Pearson Edexcel Extended Project Qualification (EPQ) provides students with the opportunity to develop their independent research skills alongside their core International A Level subjects. Universities and employers attach high value to the transferable skills that are enhanced by undertaking the EPQ. It benefits the student as it’s an academic qualification, which is equivalent to an AS Level and carries UCAS points, plus it also develops life-long learning and project skills.

What’s involved?

You work with your students to agree the suitable project topic/area of interest. From there, it’s very straightforward to deliver EPQ. The teacher provides guidance on planning and research activities, but the key objective is for students to develop their independent research skills and then apply what they’ve learnt in the creation of an original portfolio of work that will be externally assessed.

EPQ is easy to deliver, results in additional UCAS points and equips students with the skills necessary to excel at the next stage of their learning journey. It’s no surprise that entries have doubled in the past year worldwide.
Preparing learners for global opportunities

In recent years, universities and employers have highlighted the need for students and graduates to develop a range of transferable skills, often referred to as ‘soft skills’, to enable them to better meet the demands of undergraduate study and the world of work.

Our world-class qualifications and resources instil and embed the skills that help children grow into resilient, curious and globally connected young adults.

Pearson have also teamed up with researchers from Nesta and the Oxford Martin School to build a research project that progresses the conversation about the future of work.

Supporting the development of transferable skills in your school

If you follow Pearson Edexcel International Advanced Level (IAL) specifications, or your students are using our International Advanced Level textbooks, you've already started integrating transferable skills into your teaching.

That’s because they are embedded and signposted in the qualifications with accompanying skills mapping and transferable skills definitions for every subject. Transferable skills are also developed as part of the activities in the Student Books with clear signposting, so you and your learners can easily identify the skills they are developing as part of their learning.

“It’s really the more fundamental skills like teamwork and communication that seem to matter the most, that employers demand the most.”

Guy Berger, Chief Economist at LinkedIn.
