**Unit 4: Using Database Software**

May 2018  
**Scenario**

Paper Reference  
**WIT04/01**

The scenario should be distributed to candidates at least three working weeks before the examination.

**Note:** There are **no** practice files for this examination.

This scenario should be used for the purposes of preparing candidates for the examination. This copy **must not** be taken into the examination. The information contained in the scenario will be included in the examination paper.

Further details are in the Instructions of the Conduct of Examinations (ICE), available from the Pearson website for this qualification.

**Pearson will not accept any request for special consideration should candidates be given the incorrect scenario for the examination they are sitting.**

## Scenario

### Becca's Beauty Business

Becca Richards owns a beauty business which involves her visiting clients in their home.

Clients can telephone Becca to make an appointment. They specify the date, time and treatment(s) required. Alternatively, clients can make appointments whilst Becca is at their house.

Becca needs 20 minutes to travel between appointments.

Currently, Becca uses a paper-based diary. However, she realises this is not very efficient or accurate. It has been agreed that you will design and build a prototype relational database system.

Becca has thought of a range of possible tasks that could be included in the prototype. Possible tasks are:

- registering clients
- managing appointments
- adding treatments
- archiving appointments
- printing sales information.

The final system will be based on your evaluation of the prototype and your recommendations for further functionality.
