Moderator's Report Principal Moderator Feedback

Summer 2018

Pearson Edexcel International Advanced
Level
In Information and Communication Technology
(WIT08) Paper 1

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Comments

In this moderation window it was pleasing to see that most centres submitted the sample required on one disk and had included the e-records and Candidate Authentication Sheets. The majority were labelled according to the correct naming conventions as detailed in the document 'Moderation of e-Portfolios: Guidance for Centres'. Many students' e-portfolios were in the correct file formats, within the stated file size of 25 MB and most contained a clear index file which started the e-portfolio. It was also good to see many assessors giving clear feedback in the e-records explaining the assessment decisions made and marks awarded.

On the whole, most students addressed the strands correctly and most assessors awarded marks according to the specification. However, there are still instances of students being placed in too high a mark band for the evidence produced.

Strand A

A lot of students are producing good functional specifications whereby Moderators can clearly see who, what, where and so on. However, there are still instances of full marks being awarded when the success criteria given is not effectively measurable. Also, at times, students are giving very general objectives that could apply to any system. Those who tend to find it extremely hard to evaluate in Strand E and make it hard for the Moderator to determine what the system is about / should do.

Strand B

It was nice to see how many students addressed this strand well with clear evidence of the design of selection, iteration and sequential searching. However, there are still many students who do not evidence this strand correctly. At Mark Band 1 level, if there are any problems with evidence it tends to be with prototyping and the need for a list of functions. It is worth noting that including a prototype alone is not sufficient evidence for the top of Mark Band 1. It is expected evaluative comments will be present regarding the prototype and that changes will be made to the design because of this evaluation. The list of functions is very important as it helps the Moderator see what is going to be coded / customised.

If evidence was weak for Mark Band 2, it also tended to be geared around the prototype and the functions to be programmed. For the top of Mark Band 2, prototyping needs to go above and beyond what is required for Mark Band 1. The important thing here is that the evaluation of each prototype needs to relate back to user requirements and how well it meets them. It should also detail changes to be made as a result.

At Mark Band 3 level, it is expected the design is detailed enough for a competent professional to take away and build that system exactly as it should be. There were some excellent instances where students had provided evidence to do just that. However, assessment was generous in other cases. The importance of prototyping cannot be stressed enough here. It is

impossible to attain full marks without very effective prototyping because students have to show they have considered the needs of end users other than themselves. This must be clear from the prototype evidence and, can be confirmed in the final evaluation. All of this evidence can clearly show how feedback from test users was used to shape and refine the final design.

Strand C

Most centres are providing projects which are suitable and it was very pleasing to see students using loops and different types of selection appropriately. It was also nice to see students writing effective SQL statements that included iteration and selection. There was creative use of coding for many other tasks too. However, at times, there is evidence of students being placed in too high a mark band for the evidence present. It is a fundamental requirement of this unit / strand that students write their own code to include selection and iteration. This does not mean trying to use recorded macros (spreadsheets) or macros (database) to cover it. We are expecting 'hand coding' that covers different types of selection and iteration. Students that rely **entirely** on the aforementioned macros for evidence will find that they do not attract many marks in this strand.

Standard Ways of Working are also important in this strand. With regards to programming code, that includes good use of indentation and comments clearly explaining the purpose of the code. Students should identify their own code where appropriate.

Strand D

Those students who had included good measurable objectives in their specification did this very well indeed, as did those who had worked closely with a client. On the whole, this strand is being approached very positively with students including detailed test plans and evidence of the results. There was some very good evidence of formative testing in conjunction with clients / prototyping and refinements. However, there are still instances of students putting forward a test plan without any hard evidence of the results. We do need to see the results of testing. Students could also help moderation here by clearly identifying which are the boundary, normal, out of range and illegal tests. At times, finding evidence of anything other than normal is difficult, whilst at other times it is very clear to see some serious and in-depth testing had been carried out.

Strand E

There are a significant number of marks for evaluation and it was nice to see how many centres were awarding them correctly. Students with strong functional specifications tended to score more highly than those who did not and many in-depth, critical, fully honest evaluations were seen.

It is worth noting here though that the evidence has to be **evaluative**. At times, students list the objectives and say met, or write a paragraph or two about each but just say what they have done. We are expecting to find clear

evaluative evidence of how well they meet each objective and the evidence to support it.

At Mark Band 1 level, there can be weaknesses but it does have to be evaluative. At this level, there should also be comments about own performance. That means own performance regarding this unit – many students are still writing about their performance as a Project Manager and trying to combine the evaluation of the Project Management unit with this. This is very rarely successful. They also have to comment on the effectiveness of their coding and whether it was the best way to meet the requirements. It is not enough to discuss where they have used code.

At Mark Band 2 level, it is expected that the evaluation will be more in-depth, including a good evaluation of objectives / success criteria and the strengths and weaknesses of the system as a whole. At this level, the coding used has to be justified and students have discussed alternate solutions.

Those students who achieved Mark Band 3 had ensured they had used prototyping very effectively and could draw on that for involvement of others as well as those who had held final client meetings. It is impossible to achieve Mark Band 3 without genuine involvement of others as it is impossible to evaluate the system through anyone's eyes but their own. The evaluation has to be driven by this feedback with students backing up all claims of what is successful (or not) with evidence from others to support this.
