

# GRTT INTERNATIONAL GCSE CHEMISTRY

## ACTIVITY 4 - TASK

### **Purpose**

The purpose of this activity is to look at an embedded practical in the 4CH1 specification -investigate temperature changes during reactions and consider how your students could do this practically. Then consider the learning achieved and how this prepares them to answer an examination question.

### Activity 4

You have been presented with:

An experiment sheet Neutralisation- curing acidity

An experiment sheet Heat energy from alcohols

Question 10 from the sample assessment materials and associated mark scheme

### **Your task**

Look at the exam question and identify what skills are being tested.

Review both experiments and decide the difficulty of each for your students.

Consider how you might carry out these practicals and how you could develop your students' mathematical and practical skills through them.
