

GRTT INTERNATIONAL GCSE CHEMISTRY

ACTIVITY 2 - TASK

Purpose

The purpose of this activity is to look at a core practical in the 4CH1 specification and consider how it can be covered in a way that will prepare students for examination questions on the practical.

Ideally, students would carry out the practical themselves, with teacher demonstration being an alternative.

Your task

Look at the extract from the Core Practical Guide and the question from the SAMs.

Would you use the method in the CPG with your students?

As a class practical or a demonstration?

Would you modify it in any way?

How does the question from the SAMs link with the core practical?

How many skills does it cover?
