2. (a) A taxi company uses a database to hold details of its drivers and vehicles. Complete the following table about some of the fields within a driver's record. The first one has been done for you.

Field name	Example data	Type	Size	Reason
Driver I.D.	24	Numeric	2	Example data shows a number and there are unlikely to be more than 99 drivers.
Vehicle colour	BLK			
Next service date for the vehicle	241205			
Telephone number for the driver	0207 758 5656			

(9)

(b) When data is entered into the database, it is validated by software. Choose two fields from the table above. For each field, name a validation technique which would be suitable and describe how the named validation would work.

Choice 1

Field name .....

Validation technique .....

Description .....

Choice 2

Field name .....

Validation technique .....

3. A mail order company receives customers' orders written on printed slips. An example is shown in the diagram.

Customer name	Mr. J. Smith	Customer reference number	JS3216		
Item description	Item code	Quantity	Office use only		
			Date in	In stock	Checked
C D Storage Rack	TF6651	1			
Shelf unit	HU7217	2			
Keyboard cover	TK5350	1			

(a) The slips are batch processed daily. Explain the term **batch processing**.

.....  
.....  
(2)

(b) Instead of batch processing, transaction processing could be used. Give **one** advantage to the company of using transaction processing rather than batch processing.

.....  
(1)

(c) The item code is used instead of the item description when processing the order. Give **three** reasons why this is beneficial to the company.

Reason 1 .....

Reason 2 .....

Reason 3 .....

(3)

(d) The data on the slip is entered by a data entry clerk. A second clerk checks the entry and, if it is correct, signs the "Checked" column on the slip. State the name of this process and give the reason why the company requires it.

5. A town council wishes to improve traffic flow through a town. The planners run computer simulations of the proposed improvements and report the results to the council.

(a) Explain what is meant by a computer simulation.

.....  
.....  
(2)

(b) State **three** benefits to the town of running the simulations.

Benefit 1 .....  
Benefit 2 .....  
Benefit 3 .....  
(3)

(c) State **one** limitation of the simulations.

.....  
(1)

(d) The results of the simulations must be presented to the town council before further development takes place. The report must present cost and traffic flow predictions. Describe a suitable method of presenting this type of information. Justify your answer.

.....  
.....  
(2)

(e) The council wishes to present the final plan to the residents for their approval. Describe a suitable method of presenting this information. Justify your answer.

Q11

12. This spreadsheet is used to work out the pay for employees of a small company. Each employee is paid an hourly rate for working up to 40 hours a week. Extra hours are called overtime and earn a higher rate of pay called overtime rate which is calculated by multiplying the hourly rate by one and a half.

	A	B	C	D	E	F	G
1	<b>Name</b>	<b>Hourly rate</b>	<b>Overtime rate</b>	<b>Hours worked</b>	<b>Overtime</b>	<b>Total pay</b>	
2	Jones	£5.50	£8.25	43	3	£244.75	
3	Singh	£5.50	£8.25	38	0	£209.00	
4	Cohen	£6.00	£9.00	46	6	£294.00	
5	Kumar	£5.00	£7.50	40	0	£200.00	
6	Stone	£6.50	£9.75	36	0	£234.00	
7							
8						£1,181.75	<b>Total payroll</b>

(a) State the function which will be in cell F8 .....  
**(2)**

(b) State the formula which will be in cell C2 .....  
**(2)**

(c) Complete the formula which will be in cell F3.  
 B3\*(D3-E3).....  
**(3)**

(d) If Mr. Jones works more than 48 hours in a week, the spreadsheet displays the message “over” in cell G2.

(i) Give the function statement in G2.  
 .....  
**(4)**

(ii) Explain how the function could most easily be put into cells G3 to G6.
