

Activity I Record Sheet

Here are my thoughts:

Attempt	Does it demonstrate knowledge of the correct process? (Yes, No, Partly)	Number of marks (Maximum 3)	Comment
A	Yes	3	Correct substitution shown. Correct value of discriminant
B	No	0	No substitution shown
C	Yes	3	All the values in the working are correct. The 92 must have come from the correct evaluation of $6^2 - 4 \times 2 \times (-7)$.
D	No	0	This is the typical display on a calculator – no convincing working has been shown.
E	No	0	This has just used the root finder on the calculator. No process has been shown.
F	Partly	1	All the steps in completing the square have been shown.
