INTERNATIONAL GCSE
Science (Double Award)

SAMPLE ASSESSMENT MATERIALS
Pearson Edexcel International GCSE in Science (Double Award) (4SD0)
First examination June 2019
Edexcel, BTEC and LCCI qualifications

Edexcel, BTEC and LCCI qualifications are awarded by Pearson, the UK’s largest awarding body offering academic and vocational qualifications that are globally recognised and benchmarked. For further information, please visit our qualification websites at qualifications.pearson.com. Alternatively, you can get in touch with us using the details on our contact us page at qualifications.pearson.com/contactus

About Pearson

Pearson is the world’s leading learning company, with 40,000 employees in more than 70 countries working to help people of all ages to make measurable progress in their lives through learning. We put the learner at the centre of everything we do, because wherever learning flourishes, so do people. Find out more about how we can help you and your learners at qualifications.pearson.com

Introduction

The Pearson Edexcel International GCSE in Science (Double Award) is designed for use in schools and colleges. It is part of a suite of International GCSE qualifications offered by Pearson.

These sample assessment materials have been developed to support this qualification and will be used as the benchmark to develop the assessment students will take.
General marking guidance

- All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than be penalised for omissions.
- Examiners should mark according to the mark scheme – not according to their perception of where the grade boundaries may lie.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification/indicative content will not be exhaustive.
- When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, a senior examiner must be consulted before a mark is given.
- Crossed-out work should be marked unless the candidate has replaced it with an alternative response.

Subject specific marking guidance

Symbols, terms used in the mark scheme

- Round brackets ( ): words inside round brackets are to aid understanding of the marking point but are not required to award the point
- Curly brackets { }: indicate the beginning and end of a list of alternatives (separated by obliques), where necessary, to avoid confusion
- Oblique /: words or phrases separated by an oblique are alternatives to each other and either answer should receive full credit.
- ecf: indicates error carried forward which means that a wrong answer given in an early part of a question is used correctly to a later part of a question.

You will not see ‘owtte’ (or words to that effect). Alternative correct wording should be credited in every answer unless the mark scheme has specified specific.

The Additional Guidance column is used for extra guidance to clarify any points in the mark scheme. It may be used to indicate:

- what will not be accepted for that marking point in which case the phrase ‘do not accept’ will be alongside the relevant marking point
- it might have examples of possible acceptable answers which will be adjacent to that marking point
Instructions

- Use black ink or ball-point pen.
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided
  - there may be more space than you need.
- Calculators may be used.
- Some questions must be answered with a cross in a box \( \Box \). If you change your mind about an answer, put a line through the box \( \Box \) and then mark your new answer with a cross \( \Box \).

Information

- The total mark for this paper is 110.
- The marks for each question are shown in brackets
  - use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
Answer ALL questions. Write your answers in the spaces provided.

1. The diagram shows a pot containing yoghurt and fruit.

(a) Describe how a named bacterium produced this yoghurt from milk.

.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
................................................................................................................................

(b) Suggest the health benefits to a human of adding fruit to the yoghurt.

................................................................................................................................

(Total for Question 1 = 5 marks)
2 A rhino is a large mammal that lives in hot parts of Africa.

The drawing shows a rhino.

(a) The rhino feeds on plants and rests in the shade during the day.

(i) Which of the following describes the trophic level of a rhino?

☐ A producer
☐ B primary consumer
☐ C secondary consumer
☐ D tertiary consumer

(ii) Which of the following explains why the rhino rests in the shade during the day?

☐ A it has a large surface area to volume ratio and needs to avoid overheating.
☐ B it has a large surface area to volume ratio and needs to gain heat.
☐ C it has a small surface area to volume ratio and needs to avoid overheating.
☐ D it has a small surface area to volume ratio and needs to gain heat.
(b) The horn of the rhino is valuable in some human cultures. This results in rhinos being killed just for their horn.

This species is at risk of extinction because the mean rate of killing is one rhino every six hours.

In 2016, there were an estimated 25,000 of one species of rhino in Africa.

Calculate the year in which this rhino species would become extinct, assuming the number of births equals the number of natural deaths.

$$\text{year} = \text{________________________}$$

(c) In an effort to protect the rhino from extinction, scientists have produced a heart rate monitor.

The monitor is attached to the rhino. It sends an alarm signal to the nearest police station if the rhino is under stress.

This allows the police to respond quickly to save the rhino from being killed.

(i) Explain how stress affects the heart rate of a rhino.

(ii) Describe the evidence the scientists need to find out if this method helps to protect the rhino from extinction.

(Total for Question 2 = 9 marks)
3 A study investigates the effect of training on athletic performance.

In the study, the number of capillaries in the muscle tissue of a person is measured before and after a six-week period of training.

(a) The table shows the results.

<table>
<thead>
<tr>
<th>Mean number of capillaries per mm²</th>
</tr>
</thead>
<tbody>
<tr>
<td>before training</td>
</tr>
<tr>
<td>437</td>
</tr>
</tbody>
</table>

(i) Explain how training may affect the athletic performance of this person. Use information from the table to support your answer.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
(ii) Give two ways in which the design of the study could be improved.

1 ..................................................................................................................................

2 ..................................................................................................................................

(b) The diameter of a capillary is 8.0 µm and the diameter of the aorta is 25.0 mm.  
1000 µm = 1 mm.

(i) Calculate the ratio of the diameter of the aorta to the diameter of the capillary.  
Show your working.

\[
\text{ratio} = \frac{25.0 \, \text{mm}}{8.0 \, \mu\text{m}}
\]

(ii) Explain why the aorta has a thicker wall than the capillary.

..................................................................................................................................

..................................................................................................................................

..................................................................................................................................

..................................................................................................................................

..................................................................................................................................

..................................................................................................................................

(Total for Question 3 = 11 marks)
4. The diagram shows a cell.

(a) (i) Which type of cell does the diagram show?

- A  an animal
- B  a bacterium
- C  a fungus
- D  a plant

(ii) The statements below describe conditions required for some molecules to move into this cell.

1. a concentration gradient
2. use of ATP

Which of these statements is correct for the process for osmosis?

- A  1 only
- B  2 only
- C  1 and 2
- D  neither 1 nor 2
(b) The diagram shows some of the apparatus used to investigate the rate of osmosis.

In the space below draw a labelled diagram to show how you would put this apparatus together to investigate the rate of osmosis.

(4)
(c) The apparatus is used to find out the effect of different sucrose concentrations on the rate of osmosis.

The graph below shows the results.

![Graph showing rate of osmosis vs concentration of sucrose]

Calculate, using information from the graph, the rate of osmosis in mm per minute that would occur for a sucrose concentration of 2.5%.
Show your working.

\[
\text{rate of osmosis} = \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \text{mm per minute}
\]

(Total for Question 4 = 8 marks)
5 Electrical impulses pass along motor neurones to effectors.

(a) The diagram shows a motor neurone.

The neurone is stimulated by a neurotransmitter to pass an electrical impulse along its length.

(i) Draw a circle around the part of the neurone that is stimulated by the neurotransmitter.

(ii) The longest motor neurone in the human body passes electrical impulses from the base of the spinal cord to muscle in the big toe. This neurone can be up to 1.3 m in length.

An impulse passes along this neurone at a speed of $1.20 \times 10^2$ metres per second.

Calculate the time taken, in seconds, for an impulse to pass along this neurone.

\[
\text{time} = \frac{\text{distance}}{\text{speed}} = \frac{1.3 \text{ m}}{1.20 \times 10^2 \text{ m/s}} = 0.010833 \text{ s}
\]

(iii) All neurones need a supply of energy from respiration.

Name the organelle in this motor neurone that supplies energy.
(b) Multiple sclerosis is a disorder in which the insulating layer that surrounds a neurone is gradually destroyed. This prevents the passage of electrical impulses.

Scientists hope to treat multiple sclerosis using a protein called myelin basic protein (MBP).

Transgenic cows can produce large quantities of MBP in their milk.

The diagram shows four stages in the process of creating transgenic cows.

(i) Name the two structures in the bacterium that contain DNA.

1 ..........................................................................................................................

2 ..........................................................................................................................

(ii) Name the stage that involves the use of ligase.

..........................................................................................................................

(iii) Name the stage that involves placing a transgenic embryo into a uterus.

..........................................................................................................................

(Total for Question 5 = 8 marks)
6 Car exhaust fumes contain air pollutants including carbon monoxide and sulfur dioxide.

(a) Explain why carbon monoxide is a harmful air pollutant.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(b) Which of the following is a direct consequence of sulfur dioxide pollution?

☐ A production of acid rain
☐ B soil erosion
☐ C production of ozone
☐ D eutrophication
(c) A species of plant does not grow by the side of roads.

One hypothesis to explain this observation is that sulfur dioxide inhibits seed germination.

Design an investigation to test this hypothesis.

Your answer should include experimental details and be written in full sentences.

(Total for Question 6 = 9 marks)
7 The diagram shows parts of the human digestive system.

(a) Describe how food passes from the mouth to the stomach.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(b) Explain what happens to protein in the stomach.

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
(c) Gluten is a protein found in wheat.

In some people, the lining of the small intestine can be damaged by gluten. This causes a condition called coeliac disease.

The diagram shows the lining of the small intestine of a child unaffected by gluten and a child with coeliac disease.

Unaffected

Coeliac disease

Suggest how coeliac disease could affect the growth of a child.

(Total for Question 7 = 10 marks)
8  Male infertility can be caused by reduced sperm production and reduced sperm movement.

Scientists investigated the effect of a drug called letrozole on male infertility.

A large group of infertile men was divided into two smaller groups.

Group 1 received 2.5 mg of letrozole per day for six months and Group 2 received no treatment.

The scientists measured the following at the start of the investigation and after six months:

- sperm concentration
- percentage of moving sperm
- blood testosterone level
- blood oestrogen level
- side effects such as hair loss and skin rash

The table below shows the results.

<table>
<thead>
<tr>
<th>Factors measured</th>
<th>Group 1 (letrozole)</th>
<th>Group 2 (no treatment)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>start</td>
<td>after 6 months</td>
</tr>
<tr>
<td>sperm concentration /number per cm$^3$</td>
<td>450</td>
<td>$1.4 \times 10^6$</td>
</tr>
<tr>
<td>percentage of moving sperm</td>
<td>2</td>
<td>18</td>
</tr>
<tr>
<td>blood testosterone level /arbitrary units</td>
<td>249</td>
<td>1198</td>
</tr>
<tr>
<td>blood oestrogen level /arbitrary units</td>
<td>44</td>
<td>0</td>
</tr>
<tr>
<td>number of men with side effects</td>
<td>0</td>
<td>8</td>
</tr>
</tbody>
</table>
The scientists concluded that letrozole is a safe and effective treatment for male infertility.

Evaluate this conclusion.

(Total for Question 8 = 6 marks)
Genetic conditions can be controlled by dominant alleles or by recessive alleles.

(a) Explain one difference between a dominant allele and a recessive allele. 

..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................
..........................................................................................................................

(b) Pedigree analysis can be used to find out if characteristics are controlled by dominant or recessive alleles.

The diagram below shows a family pedigree for albinism.

![Pedigree Diagram]

Key
- ■ unaffected female
- ■ unaffected male
- ○ albino female
- □ albino male
Explain, using information in the pedigree, whether albinism is controlled by a recessive allele or a dominant allele.

(d) Individuals who are heterozygous for sickle cell anaemia are protected from malaria.

Suggest how this would affect the number of individuals born with sickle cell anaemia in parts of the world where malaria is common.

(Total for Question 9 = 12 marks)
10 Plants make sugars by the process of photosynthesis.

(a) (i) Which of the following factors is least likely to limit the rate of photosynthesis?

- □ A  carbon dioxide concentration
- □ B  light intensity
- □ C  oxygen concentration
- □ D  temperature

(ii) Which combination of factors is most likely to limit the rate of photosynthesis in the early morning?

- □ A  carbon dioxide concentration and soil pH
- □ B  temperature and light intensity
- □ C  water content of soil and soil pH
- □ D  water content of soil and light intensity

(b) A student carries out an experiment to investigate the need for chlorophyll in photosynthesis.

He uses a variegated leaf as shown.

![Variegated Leaf Diagram]

The green part of the leaf has cells that contain chlorophyll. The white part of the leaf has cells that do not contain chlorophyll.
(i) Describe the procedure used to test this leaf for starch.

<td></td>
</tr>
<tr>
<td>50</td>
<td>4.80</td>
<td>3.40</td>
<td></td>
</tr>
<tr>
<td>70</td>
<td>3.90</td>
<td>2.80</td>
<td></td>
</tr>
</tbody>
</table>

(a) (i) Plot a bar graph to show this data.
(ii) Calculate the increase in mean maximum lung volume for males between the ages of 7 and 25.

\[ \text{increase} = \ldots \text{dm}^3 \]

(iii) Explain why the mean maximum lung volume for males and females is similar at age 7 but is different at age 25.

(b) The data shows the mean maximum lung volume at each age.

(i) Which of the following would improve the reliability of these mean values?

- A using a larger range of ages
- B measuring more people at each age
- C measuring lung volume in cm³
- D measuring lung volumes in other mammals

(ii) Variation in maximum lung volume exists between males at each age. Suggest two factors that could cause this variation.

1 ...
2 ...

(Total for Question 11 = 12 marks)
12 Selective breeding has been used by farmers to improve the quality of their animals.

(a) (i) Describe how selective breeding could be used to improve the volume of milk produced by cows. (3)

.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................

(ii) In recent years farmers have used artificial insemination to fertilise their cows.

In this technique many samples of semen are collected from one bull.

These samples can be used to fertilise cows.

Suggest the advantages of using artificial insemination in selective breeding. (3)

.......................................................................................................................... ... ..........................................................................................................................
.......................................................................................................................... ... ..........................................................................................................................

.......................................................................................................................... ... ..........................................................................................................................
(b) Farmers use a variety of methods to improve the growth of their crops.

One method is the use of a glasshouse.

Describe how the use of a glasshouse improves the growth of crops. (4)

  - provide additional minerals (1)  
  - control water supply (1)  
  - reduce damage by pests/use biological control (1) | 4 |

**Total for Question 12 = 10 marks**

**TOTAL FOR PAPER = 110 MARKS**
Chemistry
Paper 1

Sample Assessment Materials for first teaching September 2017
Time: 2 hours

You must have:
Calculator, ruler

Instructions
• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided
  – there may be more space than you need.
• Calculators may be used.
• Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information
• The total mark for this paper is 110.
• The marks for each question are shown in brackets
  – use this as a guide as to how much time to spend on each question.

Advice
• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.
The Periodic Table of the Elements

* The lanthanoids (atomic numbers 58-71) and the actinoids (atomic numbers 90-103) have been omitted.

The relative atomic masses of copper and chlorine have not been rounded to the nearest whole number.
Answer ALL questions. Write your answers in the spaces provided.

1. The diagram shows the structure of an atom.

   (a) Name the central part of an atom.

   (b) Name the positively charged particles in an atom.

   (c) State how the diagram shows that this atom is neutral.

   (d) Give the mass number of this atom.

   (e) Give the name of the element containing this atom. Use the Periodic Table to help you.

(Total for Question 1 = 5 marks)
2 Substances can be classified as elements, compounds or mixtures.

(a) Each of the boxes in the diagram represents either an element, a compound or a mixture.

(i) Explain which two boxes represent an element.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(ii) Explain which two boxes represent a mixture.

.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...
.......................................................................................................................... ...

(b) The list gives the names of some methods used in the separation of mixtures:

- chromatography
- crystallisation
- distillation
- filtration

Use names from the list to choose a suitable method for each separation.

Each name may be used once, more than once or not at all.

(i) Separating water from sodium chloride solution.

(ii) Separating the blue dye from a mixture of blue and red dyes.

(iii) Separating potassium nitrate from potassium nitrate solution.

(Total for Question 2 = 7 marks)
3 Ammonium chloride decomposes in a reversible reaction. The equation for this reaction is

\[ \text{NH}_4\text{Cl}(s) \rightleftharpoons \text{NH}_3(g) + \text{HCl}(g) \]

(a) State how the equation shows that the reaction is reversible.

(b) Some ammonium chloride is heated gently in a test tube.

The diagram shows the test tube after it has been heated gently for a short time.

(i) Identify solid X and the two gases formed in region Y of the test tube.

Solid X

Gases in region Y
(ii) Which change of state occurs in the test tube during heating?  

☐ A condensing  
☐ B evaporating  
☐ C melting  
☐ D subliming

(c) An experiment involving ammonium chloride can be used to show the process of diffusion.  

The diagram shows the apparatus at the start of the experiment.

At the end of the experiment, a white solid forms in the test tube.  
Explain which position, A, B or C, shows where the white solid forms.

(Total for Question 3 = 7 marks)
4 The percentage by volume of oxygen in air can be found by using the rusting of iron.

A student sets up this apparatus to measure the volume of oxygen in a sample of air.

An excess of wet iron filings is used.

At the start of each experiment, the reading on the syringe is recorded and the apparatus is then left for a week so that the reaction is complete.

The reading on the syringe is then recorded again.

(a) The diagram shows the readings in one experiment.

Complete the table to show:
- the syringe reading at the end of this experiment
- the volume of oxygen used in the experiment.

| syringe reading at start / cm³ | 76 |
| syringe reading at end / cm³   |    |
| volume of oxygen used / cm³   |    |
(b) The table shows the results recorded by a different student in her experiment.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>volume of air in conical flask / cm³</td>
<td>100</td>
</tr>
<tr>
<td>volume of air in connecting tube / cm³</td>
<td>10</td>
</tr>
<tr>
<td>original volume of air in syringe / cm³</td>
<td>80</td>
</tr>
<tr>
<td>final volume of air in syringe / cm³</td>
<td>43</td>
</tr>
</tbody>
</table>

Calculate the percentage of oxygen in air using these results. (3)

percentage of oxygen = .............................................................. %

(c) The table shows some possible causes of anomalous results in this experiment.

Use terms from the box to complete the table, showing possible causes and their effects on the volume of oxygen used in this experiment.

<table>
<thead>
<tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

Each term may be used once, more than once, or not at all. (3)

(Total for Question 4 = 8 marks)
5 A metal is added to copper(II) sulfate solution.

A displacement reaction only occurs if the metal added is more reactive than copper.

\[ \text{metal} + \text{copper(II) sulfate} \rightarrow \text{metal sulfate} + \text{copper} \]

Displacement reactions are exothermic. The more reactive the metal added, the greater the temperature rise.

A student uses the following method in an experiment to compare the reactivities of different metals:

- pour some copper(II) sulfate solution into a boiling tube and record its temperature using a thermometer
- add some metal to the tube and stir with the thermometer
- record the maximum temperature of the contents of the tube.

He repeats the method using the same amount, in moles, of different metals.

(a) To make the experiment valid, he starts with the copper(II) sulfate solution and the added metal at the same temperature.

State two other variables that must be controlled if the experiment is to be valid.

(2)
(b) Another student uses the same method three times for each of the metals E, F, G and H. The table shows her results for these metals.

<table>
<thead>
<tr>
<th>Metal</th>
<th>Temperature increase / °C</th>
<th>Mean temperature increase / °C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>E</td>
<td>7.0</td>
<td>4.0</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
<td>0.0</td>
</tr>
<tr>
<td>G</td>
<td>6.0</td>
<td>5.0</td>
</tr>
<tr>
<td>H</td>
<td>5.5</td>
<td>11.0</td>
</tr>
</tbody>
</table>

(i) The student calculates the mean temperature increase for metals E and F. She does not include anomalous values in her calculations.

Calculate the mean temperature increase for metals G and H, ignoring any anomalous values. Write your answers in the table.

(ii) Explain which metal is the most reactive.

(iii) Explain which metal is less reactive than copper.

(Total for Question 5 = 8 marks)
6 This question is about the elements in Group 1 of the Periodic Table and their reactions with water.

(a) State why sodium and potassium are in Group 1 of the Periodic Table.

(b) A reaction occurs when a small piece of sodium is added to a large volume of water in a trough.

   (i) Give two observations that you would make during this reaction.

   (ii) After the reaction has finished, a few drops of universal indicator are added to the solution in the trough.

       Explain the final colour of the universal indicator.

   (iii) What is the most likely pH value of the solution in the trough after the reaction is complete?

       □ A 2
       □ B 5
       □ C 8
       □ D 12
(c) Give the name of a Group 1 metal that is less reactive than sodium.  

(1)

(d) A small piece of potassium is added to a large volume of water in a trough.  

Give one observation that is made when potassium is added to water that is not made when sodium is added to water.  

(1)

(e) Complete the equation for the reaction of rubidium with water.  
State symbols are not required.  

\[ \text{Rb} + \text{H}_2\text{O} \rightarrow \text{RbOH} + \text{H}_2 \]  

(Total for Question 6 = 9 marks)
This question is about hydrocarbons.

(a) The table shows the formulae of some hydrocarbons.

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CH₄</td>
<td>H=C=C</td>
<td>CH₃-CH₂-CH₃</td>
</tr>
<tr>
<td>D</td>
<td>CH₃-CH-CH₃</td>
<td>CH₃CH=CH₂</td>
<td>CH₃CH₂CH₂CH₃</td>
</tr>
</tbody>
</table>

(i) Give the letters that represent hydrocarbons with the general formula CₙH₂ₙ

(ii) State why B is the only hydrocarbon shown as a displayed formula.

(iii) Explain which two letters represent isomers.

(iv) How many of the hydrocarbons are members of the homologous series of alkanes?
(b) Many hydrocarbons are used as fuels. There are problems associated with this use.

(i) Explain how the combustion of a hydrocarbon can lead to the formation of a poisonous gas.

(ii) State why this gas is poisonous to humans.

(c) Fuels used in cars often have sulfur compounds removed.

Explain how the combustion of these fuels in car engines still leads to the formation of acid rain.
8 The copper(II) carbonate in the mineral, malachite, reacts with hydrochloric acid according to this equation.

\[ \text{CuCO}_3(s) + 2\text{HCl}(aq) \rightarrow \text{CuCl}_2(aq) + \text{H}_2\text{O}(g) + \text{CO}_2(g) \]

Some students investigate the effect of changing the concentration of acid on the rate of this reaction. The diagram shows the apparatus they use.

This is the method they use:
- set the balance to zero
- add an excess of malachite lumps to the conical flask and replace the cotton wool
- start a timer and record the balance reading after one minute.

The experiment is repeated using different concentrations of hydrochloric acid. The mass and number of malachite lumps are kept the same in each experiment.

(a) The table shows the results obtained in one series of experiments.

<table>
<thead>
<tr>
<th>concentration of hydrochloric acid / mol/dm³</th>
<th>0.6</th>
<th>0.8</th>
<th>1.0</th>
<th>1.6</th>
<th>1.8</th>
<th>2.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>balance reading / g</td>
<td>−0.20</td>
<td>−0.27</td>
<td>−0.44</td>
<td>−0.54</td>
<td>−0.60</td>
<td>−0.67</td>
</tr>
</tbody>
</table>

State why the balance readings have negative values.

(1)
(b) The graph shows the results of this series of experiments.

The circled point indicates an anomalous result.

(i) Suggest one mistake the students could have made to produce this result.

(ii) State the relationship shown by the graph.

(c) Explain why an increase in the concentration of the acid causes an increase in the rate of the reaction. You should use the particle collision theory in your answer.

(Total for Question 8 = 5 marks)
9 The flow chart shows how ethene can be obtained industrially from crude oil.

```
| crude oil | step 1 | diesel | step 2 | dodecane | step 3 | ethene |
```

(a) Step 1 involves the use of a tall column.

Describe how the diesel fraction is obtained from the crude oil in step 1.

(b) In step 2, saturated compounds such as dodecane are obtained from the mixture of hydrocarbons in the diesel fraction.

Explain why dodecane is described as a **saturated hydrocarbon**.
(c) Which of these formulae is that of an alkane?

☐ A C\text{7}_\text{H}_{12}

☐ B C\text{9}_\text{H}_{18}

☐ C C\text{11}_\text{H}_{24}

☐ D C\text{13}_\text{H}_{30}

(d) In step 3, cracking is used to convert alkanes into alkenes.

Complete the equation to show the reaction in which one molecule of dodecane is converted into two molecules of ethene and one molecule of another hydrocarbon.

\[ \text{C}_{12}\text{H}_{26} \rightarrow 2\text{C}_{2}\text{H}_{4} + \text{..........................} \]

(e) Alkanes and alkenes both react with halogens, but in different ways. The equations for two examples of these different reactions are shown.

\[ \text{equation 1} \quad \text{C}_3\text{H}_6 + \text{Cl}_2 \rightarrow \text{C}_2\text{H}_5\text{Cl} + \text{compound X} \]

\[ \text{equation 2} \quad \text{C}_2\text{H}_4 + \text{Br}_2 \rightarrow \text{C}_2\text{H}_4\text{Br}_2 \]

(i) State the condition needed for the reaction in equation 1 to occur.

..........................................................................................................................
..........................................................................................................................

(ii) Deduce the formula of compound X.

..........................................................................................................................
..........................................................................................................................

(iii) Draw a dot-and-cross diagram to represent a molecule of C\text{2}_\text{H}_5\text{Cl}

Show only the outer electrons of each atom.

..........................................................................................................................
..........................................................................................................................

(iv) Equation 2 shows an example of an addition reaction.

State the type of reaction shown by equation 1.

..........................................................................................................................
..........................................................................................................................
(f) Alkenes can be distinguished from alkanes using bromine water.

(i) What colour change occurs in the reaction between propene and bromine water?

- [ ] A colourless to orange
- [ ] B colourless to green
- [ ] C green to colourless
- [ ] D orange to colourless

(ii) A compound formed in the reaction between propene and bromine water has the percentage composition by mass:

- C = 25.9%, H = 5.0%, Br = 57.6% and O = 11.5%

Calculate the empirical formula of this compound.

empirical formula = ..............................................................

(Total for Question 9 = 19 marks)
10 When aqueous solutions of potassium hydroxide and nitric acid are mixed together, an exothermic reaction occurs. The diagram shows the apparatus used in an experiment to measure the temperature increase.

This is the student’s method;

- use the larger measuring cylinder to add 25 cm³ of aqueous potassium hydroxide to the polystyrene cup
- record the steady temperature
- use the smaller measuring cylinder to add 5 cm³ of dilute nitric acid to the cup, stir the mixture with the thermometer
- record the highest temperature of the mixture
- continue adding further 5 cm³ portions of dilute nitric acid to the cup, stirring and recording the temperature, until a total volume of 35 cm³ has been added.

(a) A teacher advises the student to use a 50 cm³ burette instead of the 10 cm³ measuring cylinder.

Suggest two reasons why it would be better to use a burette instead of a measuring cylinder to add the acid in this experiment.

(2)
(b) The diagram shows the thermometer readings at the start and at the end of one experiment.

<table>
<thead>
<tr>
<th>start</th>
<th>end</th>
</tr>
</thead>
<tbody>
<tr>
<td>15</td>
<td>20</td>
</tr>
<tr>
<td>20</td>
<td>25</td>
</tr>
</tbody>
</table>

Complete the table to show:
- the thermometer reading at the start of the experiment
- the temperature rise in the experiment.

<table>
<thead>
<tr>
<th>therm. read. at end / °C</th>
<th>26.8</th>
</tr>
</thead>
<tbody>
<tr>
<td>therm. read. at start / °C</td>
<td></td>
</tr>
<tr>
<td>therm. rise / °C</td>
<td></td>
</tr>
</tbody>
</table>
(c) Another student uses the same method, adding the dilute nitric acid from a burette.

The table shows his results.

<table>
<thead>
<tr>
<th>volume of acid added / cm³</th>
<th>0.0</th>
<th>5.0</th>
<th>10.0</th>
<th>15.0</th>
<th>20.0</th>
<th>25.0</th>
<th>30.0</th>
<th>35.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>temperature of mixture / °C</td>
<td>18.0</td>
<td>20.8</td>
<td>23.5</td>
<td>24.2</td>
<td>29.0</td>
<td>28.6</td>
<td>27.6</td>
<td>26.5</td>
</tr>
</tbody>
</table>

This is the student’s graph.

![Graph showing the relationship between temperature of mixture and volume of acid added.]

The point where the lines cross represents complete neutralisation.

(i) Identify the maximum temperature reached during the experiment.

maximum temperature = .............................................................. °C

(ii) Identify the volume of dilute nitric acid that exactly neutralises the 25 cm³ of aqueous potassium hydroxide.

volume = .............................................................. cm³
(d) Another student records these results.

- volume of aqueous potassium hydroxide = 20.0 cm³
- starting temperature of aqueous potassium hydroxide = 18.5 °C
- maximum temperature of mixture = 30.0 °C
- volume of dilute nitric acid = 20.0 cm³

Calculate the heat energy released in this experiment.

\[ c = 4.2 \text{ J/g/°C} \]
\[ \text{mass of 1 cm}^3 \text{ of mixture} = 1 \text{ g} \]

\[
\text{heat energy} = \]

(e) In another experiment, the heat energy released is 1600 J when 0.040 mol of potassium hydroxide is neutralised.

Calculate the value of \( \Delta H \), in kJ/mol, for the neutralisation of potassium hydroxide.

\[
\Delta H = \]

(Total for Question 10 = 12 marks)
11 Many different salts can be prepared from acids.

(a) The table shows the reactants used in two salt preparations.

Complete the table to show the name of the salt formed and the other product(s) in each case.

<table>
<thead>
<tr>
<th>Reactants</th>
<th>Name of salt formed</th>
<th>Other product(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>zinc + hydrochloric acid</td>
<td></td>
<td></td>
</tr>
<tr>
<td>calcium carbonate + nitric acid</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(b) A student uses the reaction between aluminium hydroxide and dilute sulfuric acid to prepare a pure, dry sample of aluminium sulfate crystals.

The equation for the reaction used to prepare this salt is

$$2\text{Al(OH)}_3 + 3\text{H}_2\text{SO}_4 \rightarrow \text{Al}_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$$

The diagram shows the steps in the student’s method.
(i) State two ways to make sure that all the acid is reacted in step 2. (2)

1

2

(ii) State the purpose of filtration in step 3. (1)

(iii) In step 5, the basin is left to cool to room temperature to allow crystals of aluminium sulfate to form.

State one method of drying these crystals. (1)

(c) The student records this information about the reagents she uses in her preparation.

mass of aluminium hydroxide = 3.9 g
amount of sulfuric acid = 0.090 mol

Determine which reagent is in excess, making use of this information and the equation in part (b). (3)

reagent used in excess =
(d) Another student prepares 0.25 mol of aluminium sulfate. The formula of aluminium sulfate is $\text{Al}_2(\text{SO}_4)_3$.

Calculate the mass of aluminium sulfate prepared.

\[ \text{mass} = \ldots \text{g} \]

(e) The equation for another reaction used to prepare a sample of a salt is

\[ \text{PbO} + 2\text{HNO}_3 \rightarrow \text{Pb(NO}_3)_2 + \text{H}_2\text{O} \]

In one experiment, the amount of lead(II) oxide used was 0.75 mol and the amount of nitric acid used was 1.5 mol. At the end of the experiment, the mass of lead(II) nitrate obtained was 209 g.

Calculate the percentage yield of lead(II) nitrate in this experiment.

\[ M_r \text{ of lead(II) nitrate} = 331 \]

\[ \text{percentage yield} = \ldots \% \]

**Total for Question 11 = 17 marks**

**TOTAL FOR PAPER = 110 MARKS**
Physics
Paper 1

Sample Assessment Material for first teaching September 2017

Time: 2 hours

You must have:
Calculator, ruler

Instructions

• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided – there may be more space than you need.
• Calculators may be used.
• Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information

• The total mark for this paper is 110.
• The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.

Advice

• Read each question carefully before you start to answer it.
• Try to answer every question.
• Check your answers if you have time at the end.
EQUATIONS

You may find the following equations useful.

energy transferred = current \times voltage \times time

\[ E = I \times V \times t \]

frequency = \frac{1}{time period}

\[ f = \frac{1}{T} \]

power = \frac{work done}{time taken}

\[ P = \frac{W}{t} \]

power = \frac{energy transferred}{time taken}

\[ P = \frac{W}{t} \]

orbital speed = \frac{2 \pi \times orbital radius}{time period}

\[ V = \frac{2 \pi \times r}{T} \]

(final speed)\(^2\) = (initial speed)\(^2\) + (2 \times acceleration \times distance moved)

\[ v^2 = u^2 + (2 \times a \times s) \]

pressure \times volume = constant

\[ p_1 \times V_1 = p_2 \times V_2 \]

\[ \frac{pressure}{temperature} = constant \]

\[ \frac{p_1}{T_1} = \frac{p_2}{T_2} \]

Where necessary, assume the acceleration of free fall, g = 10 m/s\(^2\).
Answer ALL questions. Write your answers in the spaces provided.

1. (a) Which of these objects orbits a planet?

- A comet
- B dwarf star
- C galaxy
- D moon

(b) What is the correct name for our galaxy?

- A Crab Nebula
- B Milky Way
- C Solar System
- D Universe

(c) Which of these objects has the largest mass?

- A artificial satellite
- B comet
- C Earth
- D Sun

(d) Which of these stars is the coolest?

- A blue star
- B orange star
- C red star
- D yellow star

(Total for Question 1 = 4 marks)
2 This question is about the motion of a ball.

(a) A ball is at rest on a trapdoor.

Complete the diagram to show the forces acting on the ball.
Label the forces.

(b) The trapdoor swings open and the ball falls to the ground.

The ball does not bounce when it hits the ground.
Show that the final speed of the ball at the instant before it hits the ground is about 5 m/s.

(c) The graph shows how the distance travelled by the ball changes with time.

(i) Determine the time taken for the ball to hit the ground.
(ii) State the equation relating average speed, distance moved and time taken.  

(iii) Calculate the average speed of the ball after 0.40 s.  

average speed = .............................................................. m/s  

(iv) Explain how the graph shows that the ball accelerates when it falls.  

..........................................................................................................................  
..........................................................................................................................  
..........................................................................................................................  
..........................................................................................................................  
..........................................................................................................................  

(Total for Question 2 = 12 marks)
A 12V battery is connected to a component, X, and a fixed resistor, R, as shown.

(a) (i) State the name of component X.

(ii) Draw a voltmeter on the circuit diagram connected to show the voltage of component X.
(b) The voltage across component X is 12 V.

The resistor R has a value of 840 Ω.

Show that the current in ammeter A₁ is approximately 0.01 A.

Use the equation

\[
\text{voltage} = \text{current} \times \text{resistance}
\]

(c) When the circuit is placed in daylight, the current in A₂ is 0.011 A.

(i) Calculate the value of the current through A₃.

\[
\text{current} = \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots A
\]

(ii) Explain what happens to the current through A₃ when the circuit is placed in a darkened room.

(Total for Question 3 = 8 marks)
4 This question is about waves.

(a) The diagram shows a wave.

(i) What is the wavelength of the wave? (1)

- A 4.0 cm
- B 4.4 cm
- C 5.0 cm
- D 8.8 cm

(ii) What is the amplitude of the wave? (1)

- A 4.0 cm
- B 4.4 cm
- C 5.0 cm
- D 8.8 cm
(b) The diagram shows the types of radiation in the electromagnetic spectrum.

<table>
<thead>
<tr>
<th>radio waves</th>
<th>microwaves</th>
<th>infrared</th>
<th>visible light</th>
<th>ultraviolet</th>
<th>x-rays</th>
<th>gamma rays</th>
</tr>
</thead>
</table>

(i) Which of the following statements about electromagnetic waves is correct?  

☐ A  they all have the same amplitude  
☐ B  they all have the same frequency  
☐ C  they all have the same speed in free space  
☐ D  they all have the same wavelength

(ii) Electromagnetic waves have many different uses.

Explain the uses of three different radiations in the electromagnetic spectrum.

1 .................................................................

Use .................................................................

2 .................................................................

Use .................................................................

3 .................................................................

Use .................................................................

(Total for Question 4 = 9 marks)
5 A gas is contained inside a sealed syringe.

(a) The plunger is pushed so that the gas is compressed and its volume reduces at constant temperature.

(i) Before compression, the gas pressure is 100 kPa and the volume of the gas is 7.5 cm$^3$.

After compression, the volume of the gas is 5.0 cm$^3$.

Calculate the pressure of the gas after compression.

\[
\text{pressure} = \ldots \ldots \ldots \ldots \text{kPa}
\]

(ii) Explain why decreasing the volume changes the pressure of the gas in the syringe.

You should use ideas about particles in your answer.
(b) The plunger of the syringe is released and the gas returns to its original pressure of 100 kPa.

The plunger is then held in position so that the volume of the gas cannot change.

The gas is now heated and its temperature increases.

(i) Describe how the average kinetic energy of the gas particles changes when the temperature of the gas increases.

(ii) The temperature of the gas increases from 20°C to 65°C.

Calculate the pressure of the gas after it is heated.

\[
\text{pressure} = \text{............................................... kPa}
\]

(Total for Question 5 = 13 marks)
A student investigates a wind turbine.

The student places an electric fan in front of the wind turbine.

The wind turbine is connected to a voltmeter.

When the wind turbine turns, it generates a voltage.

(a) The student decides to investigate how the angle of the blades of the wind turbine affects the voltage it generates.

State two control variables for this investigation.

1

2
(b) The student obtains the following results.

<table>
<thead>
<tr>
<th>Blade angle / degree</th>
<th>Voltage / V</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0.0</td>
</tr>
<tr>
<td>10</td>
<td>2.0</td>
</tr>
<tr>
<td>20</td>
<td>2.2</td>
</tr>
<tr>
<td>30</td>
<td>2.0</td>
</tr>
<tr>
<td>40</td>
<td>1.7</td>
</tr>
<tr>
<td>50</td>
<td>1.4</td>
</tr>
<tr>
<td>60</td>
<td>1.0</td>
</tr>
<tr>
<td>70</td>
<td>0.6</td>
</tr>
<tr>
<td>80</td>
<td>0.2</td>
</tr>
<tr>
<td>90</td>
<td>0.0</td>
</tr>
</tbody>
</table>

(i) Plot the student’s results on the grid.
(ii) Draw a curve of best fit on the graph. (2)

(iii) Describe the relationship between the blade angle and the voltage. (2)

(c) The student decides to change the investigation to see how the voltage is affected by the number of blades.

(i) State the type of graph the student should use to display the results. (1)

(ii) Justify your choice of graph. (1)

(Total for Question 6 = 11 marks)
7 The circuit shows a car battery charging from an alternating current (a.c.) supply.

(a) Sketch a graph to show what is meant by a.c.

(b) State the reason why the circuit contains a diode.
(c) The 12 V car battery is connected to two identical filament lamps so that the voltage across each lamp is 6.0 V.

(i) Draw the circuit diagram.

(ii) State the equation relating power, current and voltage.

(iii) The power of each lamp is 330 mW.

   Calculate the current in a lamp.

\[
\text{current} = \frac{\text{power}}{\text{voltage}} = \frac{330 \text{ mW}}{6.0 \text{ V}} = 55 \text{ mA} = 0.055 \text{ A}
\]

(Total for Question 7 = 8 marks)
8 Sound travels as a wave.

(a) Which of these statements about sound waves is incorrect?

- □ A they can be reflected
- □ B they can travel through a vacuum
- □ C they can be refracted
- □ D they transfer energy

(b) Sound waves are a type of wave known as longitudinal waves.

(i) Name the other type of wave.

(ii) Give one example of this other type of wave.

(c) A buzzer produces a sound wave of frequency 2.9 kHz and wavelength 12 cm.

(i) State the equation relating wave speed, frequency and wavelength.

(ii) Calculate the speed of the sound wave.

\[
\text{speed} = \text{........................................................... m/s}
\]
(d) Two students investigate the Doppler effect by throwing a buzzer to each other.

Student A throws the buzzer to student B.

When the buzzer is thrown, student A notices that the sound produced changes.

Explain how the sound heard by student A changes.

You may include a diagram in your answer.

(Total for Question 8 = 10 marks)
9 This is a question about nuclear energy.

(a) Nuclear fusion can take place between different isotopes of hydrogen to produce an isotope of helium.

(i) Complete the nuclear equation for this process.

\[ ^2_1 \text{H} + ^3_1 \text{H} \rightarrow ^2_2 \text{He} + ^1_1 \text{n} \]  

(ii) This process also results in the release of energy.

State where the fusion process takes place naturally.

(iii) Explain why the isotopes of hydrogen must be heated to a very high temperature for fusion to take place.

(b) Nuclear fission also results in a release of energy.

Explain how nuclear fission differs from nuclear fusion.

(Total for Question 9 = 8 marks)
10 The International Space Station (ISS) is a satellite that orbits the Earth at a height of 409 km above the surface of the Earth. The ISS has an orbital speed of 7.66 km/s and a period of 92.7 minutes.

(a) (i) Calculate the orbital radius of the ISS.

Give your answer to 3 significant figures.

(4)

orbital radius = .............................................................. km

(ii) Calculate the radius of the Earth using your value for the orbital radius.

(1)

Earth radius = .............................................................. km

(Total for Question 10 = 5 marks)
11 Main sequence stars can vary in brightness, colour and mass.

Describe the evolution of both low mass stars and high mass stars after they join the main sequence.

(Total for Question 11 = 6 marks)
Penguins are adapted to survive in cold conditions.

The adaptations help them to maintain a constant body temperature of 39 °C. Penguins also crowd together in groups of many penguins.

(a) A student wants to investigate how the temperature of a penguin is affected when they crowd together in groups.

She uses this apparatus.

Each test tube represents a penguin.

represents a huddle of 7 penguins

represents a single penguin
(i) These statements describe the method she should use.

The statements are in the wrong order.

Put them into the correct order by numbering the boxes.

Some have been done for you.

<table>
<thead>
<tr>
<th>Statements</th>
<th>Order</th>
</tr>
</thead>
<tbody>
<tr>
<td>record the data in a table</td>
<td>8</td>
</tr>
<tr>
<td>take the temperature of the two test tubes</td>
<td></td>
</tr>
<tr>
<td>tie 7 test tubes together</td>
<td>1</td>
</tr>
<tr>
<td>heat the water to 90 °C</td>
<td>2</td>
</tr>
<tr>
<td>take the temperatures every minute</td>
<td></td>
</tr>
<tr>
<td>place equal volumes of water in all test tubes</td>
<td></td>
</tr>
<tr>
<td>put thermometers into the middle test tube and single test tube</td>
<td></td>
</tr>
<tr>
<td>record data for 15 minutes</td>
<td></td>
</tr>
</tbody>
</table>

(ii) The student draws a table to record her results.

Add suitable headings to her table.

| Time/ | | | | | |
|-------| | | | | |
|       | | | | | |
|       | | | | | |
(iii) Predict how the temperature change for the single test tube will differ from the temperature change for the group of test tubes.

(iv) Draw a sketch graph of the results you predict the student will obtain.
Label and use the axes below.
(v) Explain your prediction using ideas about thermal energy transfer.  

(b) Here are two adaptations that help penguins to maintain a constant body temperature.

- Most of their bodies are covered with layers of fat.
- They have flat overlapping feathers.

Explain why these features help penguins to maintain a constant body temperature.  

Layers of fat

Flat overlapping feathers

(Total for Question 12 = 16 marks)

| 4(b)(ii)        | 2 marks max. available for each named part of the spectrum for each use:  
- 1 mark for a simple use  
- 1 mark for a supporting description  
- e.g. for gamma rays:  
  - used to sterilise medical tools (1)  
  - (because) gamma kill bacteria (1)  
- for x-rays:  
  - used to photograph bones (1)  
  - (because) x-rays can penetrate soft tissues but not bone (1)  
- for ultraviolet:  
  - used for detecting security ink (1)  
  - (because) it fluoresces with ultraviolet lighting (1)  
- for infrared:  
  - used for optical fibre communications (1)  
  - (because) they can undergo total internal reflection (1)  
- for micro waves:  
  - used for satellite communications (1)  
  - (because) microwaves can penetrate Earth’s atmosphere (1)  
- for radio waves:  
  - used for long-range communications (1)  
  - (because) they can be reflected from the Earth’s atmosphere (1)  
<p>| no mark for simply naming a part of the spectrum | 6 |

An explanation that makes reference to the following three points:

- thermal energy loss by convection is reduced because of the air pockets in the 7 tt (1)
- causes the single tt to lose more thermal energy/RA (1)
- radiation loss is the same for both (1)
- conduction losses for 7 tt are not high/layer of tt acts as an insulator (1)

allow heat for thermal energy accept alternative descriptions of 7 tt e.g. huddle

Fat
Acts as an insulator so keeps penguins warm(1)

Feathers
Feathers trap pockets of air (1) and either reduce thermal energy loss by convection (1) or air is a poor conductor so thermal energy loss is reduced (1)
