**International Advanced Subsidiary/Advanced Level**

**UNIT 1: Mechanics and Materials**

**You must have:**

Scientific calculator, ruler, protractor

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

## Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk (\*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

## SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

- 1 An engine is used to remove water from a mine. The engine transfers energy to the water at a rate of 180 kW and wastes energy at a rate of 60 kW.

Which of the following expressions gives the efficiency of the engine?

- A  $\frac{180}{240}$
- B  $\frac{60}{240}$
- C  $\frac{60}{180}$
- D  $\frac{180}{300}$

(Total for Question 1 = 1 mark)

- 2 The graph shows how the velocity of an object varies with time.

Which of the following describes the motion of the object?

- A constant acceleration
- B constant displacement
- C decreasing acceleration
- D decreasing displacement

(Total for Question 2 = 1 mark)

3 An object is moving through a fluid.

Which row of the table states the conditions which must be met for Stokes' law to apply?

	Size of object	Shape of object	Type of flow
<input type="checkbox"/> A	any	any	turbulent
<input type="checkbox"/> B	any	spherical	turbulent
<input type="checkbox"/> C	small	spherical	laminar
<input type="checkbox"/> D	small	any	laminar

(Total for Question 3 = 1 mark)

4 Which of the following expressions gives a vector quantity?

- A density  $\times$  volume
- B force  $\times$  distance moved in direction of force
- C mass  $\times$  velocity
- D power  $\times$  time

(Total for Question 4 = 1 mark)

Questions 5 and 6 refer to the information below.

A student stretches a spring of original length  $p$  to a length  $q$  by applying an increasing force. The graph shows how the length of the spring changes as the student increases the force from zero to a magnitude  $R$ .

5 Which of the following expressions gives the stiffness of the spring?

- A  $\frac{q-p}{R}$
- B  $\frac{q}{R}$
- C  $\frac{R}{q}$
- D  $\frac{R}{q-p}$

(Total for Question 5 = 1 mark)

6 Which of the following expressions gives the work done stretching the spring from its original length  $p$  to length  $q$ ?

- A  $\frac{p \times R}{2}$
- B  $\frac{(q-p) \times R}{2}$
- C  $\frac{(q+p) \times R}{2}$
- D  $(q-p) \times R$

(Total for Question 6 = 1 mark)

7 Which of the following describes the centre of gravity of an object?

- A the point where the mass of the object is located
- B the point where the mass of the object is concentrated
- C the point where the weight of the object is located
- D the point where the weight of the object may be considered to act

(Total for Question 7 = 1 mark)

8 A student is determining the acceleration of free-fall,  $g$ .

The student uses a stopwatch to measure the time taken for a ball bearing to fall a measured distance.

The student calculates a value of  $g$  that is greater than  $9.81 \text{ m s}^{-2}$ .

Which of the following could be an explanation for the student's result?

- A The ball bearing is moving downwards when the student starts the stopwatch.
- B The ball bearing is moving upwards when the student starts the stopwatch.
- C The student starts the stopwatch before the ball bearing is dropped.
- D The student stops the stopwatch after the ball bearing lands.

(Total for Question 8 = 1 mark)

- 9 A student attached one end of a wire to a support. The student added masses to the other end of the wire, as shown. The student measured the corresponding extension for each added mass.

The wire broke when the extension was small.

The student replaced the wire with a second wire made of the same material. The second wire had a larger extension before breaking.

Which of the following produced this result?

- A The second wire had a greater diameter.
- B The second wire had a longer length.
- C The second wire had a smaller diameter.
- D The second wire had a shorter length.

(Total for Question 9 = 1 mark)

- 10 A ship has a mass of  $1.2 \times 10^7 \text{ kg}$  and has an acceleration of  $0.03 \text{ ms}^{-2}$ . The force produced by the ship's engine is  $8.0 \times 10^5 \text{ N}$ .

Which of the following expressions gives the magnitude of the drag force, in N, on the ship?

- A  $8.0 \times 10^5 - (0.03 \times 1.2 \times 10^7)$
- B  $8.0 \times 10^5 + (0.03 \times 1.2 \times 10^7)$
- C  $8.0 \times 10^5 \div (0.03 \times 1.2 \times 10^7)$
- D  $8.0 \times 10^5 \times (0.03 \times 1.2 \times 10^7)$

12 An iceberg is a large mass of ice that floats in seawater with most of its volume below the surface of the seawater. The photograph shows a typical iceberg.

(Source: © Doug Allan/Science Photo Library)

An iceberg can be modelled as a rectangular block of ice.

A particular iceberg has 6.7 m of its total height below the surface of the water, as shown.

The block of ice has a horizontal cross-sectional area of  $3500 \text{ m}^2$ .

- (a) Calculate the weight of the block of ice.

$$\text{density of seawater} = 1.03 \times 10^3 \text{ kg m}^{-3}$$

(3)

.....

.....

.....

.....

.....

.....

Weight of block = .....

- (b) An identical block of ice floats in water of a lower density than the seawater in (a).  
A larger volume of this block is below the surface of the water.

Explain why.

13 Two cars, A and B, are racing along a track.

Car A has a constant velocity of  $93 \text{ m s}^{-1}$ . At a particular instant, car A is 9 m ahead of car B, as shown.

At this instant, car B has a velocity of  $93 \text{ m s}^{-1}$ . Car B is accelerating with a constant acceleration of  $14 \text{ m s}^{-2}$ .

(a) Show that car A and car B are side by side after a time of about 1.1 s.

14 A grain of sand quickly reaches terminal velocity when it falls into water.

(a) State why the grain of sand reaches terminal velocity.

(1)

.....

.....

.....

(b) A spherical grain of sand has a weight of  $4.3 \times 10^{-5} \text{ N}$ . The grain of sand displaces water with a weight of  $1.5 \times 10^{-5} \text{ N}$ .

The terminal velocity of the grain of sand as it falls through the water is about  $0.050 \text{ m s}^{-1}$ .

Deduce whether Stokes' law applies to the grain of sand as it falls at terminal velocity.

viscosity of water =  $1.2 \times 10^{-3} \text{ Pa s}$   
diameter of grain of sand =  $1.5 \times 10^{-3} \text{ m}$

(3)

.....

.....

.....

.....

.....

.....

.....

- 15 Two identical balls, A and B, collide. Ball B is initially at rest. After the collision, ball B moves off in the same direction as ball A.

The mass of each ball is  $0.165 \text{ kg}$ .

The initial velocity of ball A is  $0.739 \text{ m s}^{-1}$ . After the collision, the velocity of ball B is  $0.691 \text{ m s}^{-1}$ , as shown.

- (a) Show that the velocity of ball A immediately after the collision is about  $0.05 \text{ m s}^{-1}$ .

(3)

.....

16 A student carried out an experiment to determine the Young modulus of copper.

\*(a) The student clamped one end of a copper wire to the bench. The wire passed over a pulley and masses were added to the other end of the wire.

A metre rule was fixed to the bench and a marker fixed to the wire, as shown.

The student measured the diameter of the copper wire.

Describe the other measurements that need to be made using this apparatus and how they will be used to determine the Young modulus of copper.

You should define the meanings of any symbols you use.

17 A child is playing a game. The child is trying to get stones to land inside an old tyre floating on the water.

The child throws a stone at a speed of  $6.3 \text{ m s}^{-1}$  and at an angle of  $55^\circ$  to the horizontal.

The stone leaves the child's hand at a height of  $1.25 \text{ m}$  above the surface of the water, as shown.

(a) Show that the vertical component of the stone's initial velocity is about  $5 \text{ m s}^{-1}$  and that the horizontal component is about  $4 \text{ m s}^{-1}$ .

(2)

(b) Show that the greatest height above the surface of the water reached by the stone is about  $3 \text{ m}$ .

(3)

18 A lorry is crossing a bridge. The bridge is supported by two columns, as shown.

Forces  $P$  and  $Q$  act on the bridge from the columns. The centre of gravity of the bridge is at its centre. At a particular time the lorry is 35 m from point X.

A simplified diagram showing the positions of the forces on the bridge is shown below.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(a) Calculate the magnitudes of the forces  $P$  and  $Q$ .

You should take moments about point X.

$$\text{force from lorry} = 4.2 \times 10^5 \text{ N}$$

$$\text{weight of bridge} = 9.8 \times 10^5 \text{ N}$$

(5)

$$P = \dots\dots\dots$$

$$Q = \dots\dots\dots$$

(b) Explain why force  $Q$  increases as the lorry moves across the bridge.

19 A 'zip-line' consists of a cable fixed at two points, one higher than the other.

A person hangs from a wire attached to a wheel, as shown. The wheel can move along the cable. The wheel moves the person along the cable.

(a) In the position shown, the person is accelerating.

Complete the free-body force diagram below to show the three forces acting on the person in this position.

(3)

(b) At a particular instant, the tension in the cable is 1200 N and the angle formed by the cable at the wheel is  $144^\circ$ , as shown.

(i) Show, by calculation, that the force on the wheel from the cable is about 740 N.
