Candidate Number

**Pearson Edexcel International Advanced Level**

**Monday 28 October 2024**

Afternoon (Time: 1 hour 45 minutes)

Paper  
reference

**WPH15/01**

**Physics**

**International Advanced Level**

**UNIT 5: Thermodynamics, Radiation, Oscillations  
and Cosmology**

**You must have:**

Scientific calculator, ruler

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

## Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk (\*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

## SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

- 1 A radioactive source emits alpha radiation, beta radiation and gamma radiation.

Which of the following is correct?

- A Alpha radiation is the most ionising.
- B Beta radiation is the least penetrating.
- C Beta radiation is the most ionising.
- D Gamma radiation is the least penetrating.

(Total for Question 1 = 1 mark)

- 2 During an earthquake, steel-framed buildings remove energy from the oscillation of the building.

Which of the following is the reason for this?

- A Steel is a ductile material.
- B Steel is an elastic material.
- C Steel is a stiff material.
- D Steel is a strong material.

(Total for Question 2 = 1 mark)

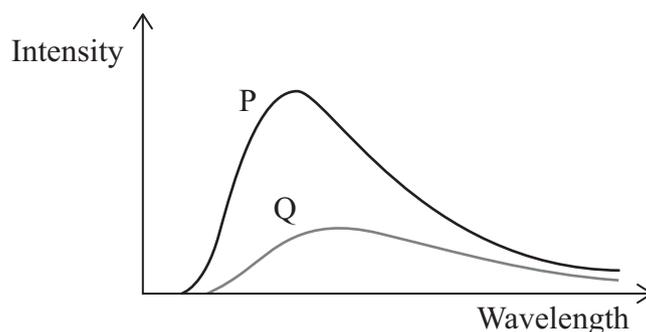

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- 3 The graph shows how intensity of radiation varies with wavelength for two stars, P and Q.

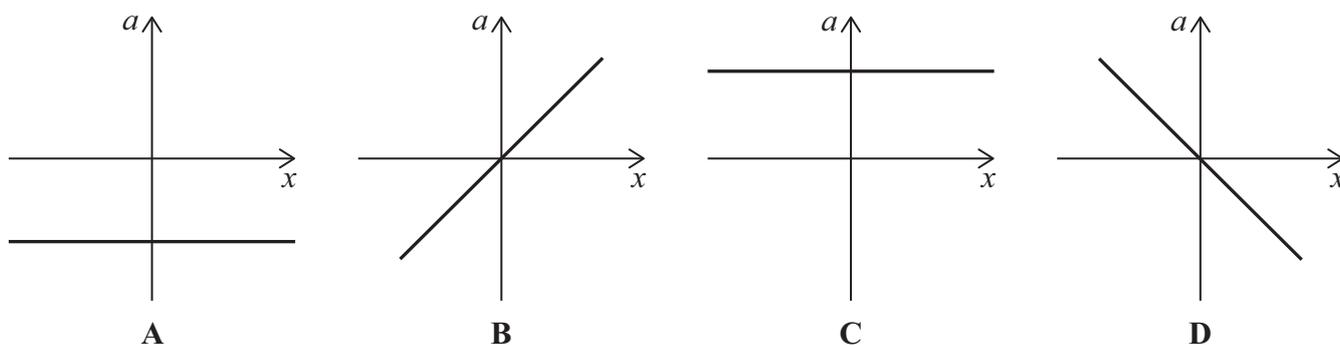

Which of the following could be deduced from the graph?

- A Luminosity of P > Luminosity of Q
- B Mass of P > Mass of Q
- C Radius of P > Radius of Q
- D Temperature of P > Temperature of Q

(Total for Question 3 = 1 mark)

- 4 A simple pendulum consists of a mass attached to a string. The pendulum is set into simple harmonic motion. The acceleration of the mass is  $a$  and the displacement of the mass is  $x$ .

Which of the following graphs shows how  $a$  varies with  $x$ ?

- A
- B
- C
- D

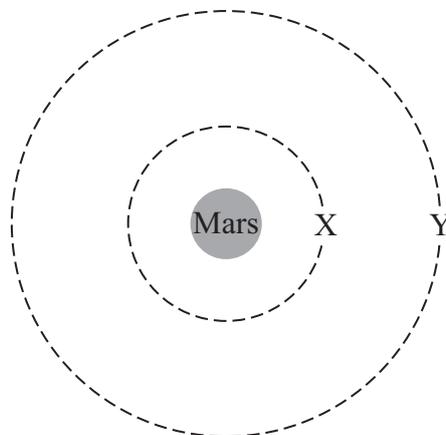

(Total for Question 4 = 1 mark)

- 5 The dashed circles on the diagram represent gravitational equipotentials about the planet Mars.

The gravitational potential at X is  $-5.5 \text{ MJ kg}^{-1}$ .

The gravitational potential at Y is  $-3.7 \text{ MJ kg}^{-1}$ .

A meteor of mass 250 kg falls from Y to X.

Which of the following is the change in gravitational potential energy of the meteor as it falls?

- A 450 MJ
- B 920 MJ
- C  $-450 \text{ MJ}$
- D  $-920 \text{ MJ}$

(Total for Question 5 = 1 mark)

- 6 A mass is hung on a spring. The mass is set into vertical oscillation with frequency of oscillation  $f$ .

The mass on the spring is doubled.

What is the new frequency of oscillation?

- A  $\frac{f}{2}$
- B  $\frac{f}{\sqrt{2}}$
- C  $\sqrt{2}f$
- D  $2f$

(Total for Question 6 = 1 mark)

7 The universe is currently expanding, but the ultimate fate of the universe is unknown.

Different conditions would result in a different ultimate fate for the universe.

Which row of the table correctly links a condition with the ultimate fate of the universe?

	Condition	Ultimate fate of universe
<input type="checkbox"/> A	Density of universe is equal to the critical density	Universe eventually contracts
<input type="checkbox"/> B	Density of universe is greater than the critical density	Universe eventually contracts
<input type="checkbox"/> C	Mass of universe is equal to the critical mass	Universe expands forever
<input type="checkbox"/> D	Mass of universe is greater than the critical mass	Universe expands forever

(Total for Question 7 = 1 mark)

8 Epsilon Indi is a main sequence star.

Which row of the table gives a possible surface temperature and luminosity for Epsilon Indi?

	Surface temperature / K	Luminosity / $L_{\text{Sun}}$
<input type="checkbox"/> A	3000	140
<input type="checkbox"/> B	4700	0.14
<input type="checkbox"/> C	5900	1400
<input type="checkbox"/> D	10 000	0.014

(Total for Question 8 = 1 mark)

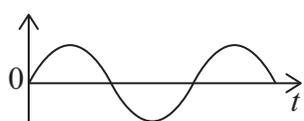

Questions 9 and 10 refer to the following information.

The graph shows how the force  $F$  varies with time  $t$  for an object performing simple harmonic motion.

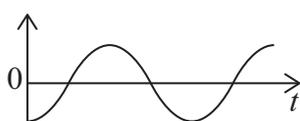

Four graphs of different quantities plotted against time, for the same period of time, are shown below.

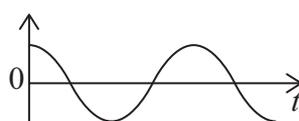

The scale on the  $x$ -axis is the same for each graph.

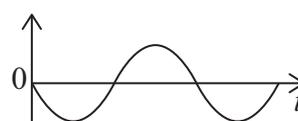

A

B

C

D

9 Which graph shows how the displacement of the object varies with  $t$ ?

- A
- B
- C
- D

(Total for Question 9 = 1 mark)

10 Which graph shows how the velocity of the object varies with  $t$ ?

- A
- B
- C
- D

(Total for Question 10 = 1 mark)

TOTAL FOR SECTION A = 10 MARKS

13 A student is investigating two simple pendulums.

Each pendulum has the same mass. One pendulum has a length  $L$ . The other pendulum has a length  $\frac{L}{2}$ .

He hangs both pendulums from the same fixed support.

The student displaces each pendulum, giving each pendulum the same initial amplitude, as shown. He then allows each pendulum to oscillate freely.

The student suggests that the maximum kinetic energy of the pendulum with a length  $\frac{L}{2}$  will be four times the maximum kinetic energy of the pendulum with a length  $L$ .

Evaluate the student's suggestion.

15 Sirius is the brightest star in the night sky. Canopus is the second brightest star.

(a) Show that the luminosity of Sirius is about  $9.7 \times 10^{27}$  W.

radius of Sirius =  $1.18 \times 10^9$  m  
surface temperature of Sirius = 9940 K

(3)

.....

.....

.....

.....

.....

.....

.....

.....

(b) A teacher claims that, from Earth, Sirius appears twice as bright as Canopus.

Assess the accuracy of this claim.

luminosity of Canopus =  $4.12 \times 10^{30}$  W  
distance of Sirius from the Earth =  $8.15 \times 10^{16}$  m  
distance of Canopus from the Earth =  $2.93 \times 10^{18}$  m

17 Arcturus is a red giant star.

When the spectrum of radiation received from Arcturus is analysed, the spectrum is found to be shifted compared with the radiation received from the Sun.

Part of the spectra of radiation from Arcturus and the Sun is shown.

(a) (i) Explain why the spectrum of radiation received from Arcturus is shifted as shown.

(2)

.....

.....

.....

.....

(ii) Determine the speed of Arcturus relative to the Sun.

(3)

.....

.....

.....

.....

.....

Speed of Arcturus = .....

(b) When light from galaxies is analysed, a shift towards greater wavelengths in the spectra of radiation is observed.

Describe how astronomers use a knowledge of these shifts to determine the distances to distant galaxies.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

18 In the 17th century, Galileo observed the planet Jupiter through a telescope and discovered a number of moons orbiting this planet.

(a) Galileo made observations of the movement of these moons for 8 days.

The largest moon is Ganymede.

Deduce whether 8 days would have been enough time for Galileo to be sure that Ganymede was orbiting Jupiter.

radius of orbit of Ganymede =  $1.07 \times 10^9$  m

mass of Jupiter =  $1.90 \times 10^{27}$  kg

1 day =  $8.64 \times 10^4$  s

(4)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) (i) Show that the gravitational field strength at the surface of Ganymede is about  $1.4 \text{ N kg}^{-1}$ .

radius of Ganymede = 2640 km  
mass of Ganymede =  $1.48 \times 10^{23} \text{ kg}$

(2)

.....

.....

.....

.....

(ii) The radius of Ganymede is about 50% larger than the radius of the Earth's Moon.

Explain what can be deduced about the mass of the Earth's Moon from this information.

The gravitational field strength at the surface of the Earth's Moon is similar to the gravitational field strength at the surface of Ganymede.

- (ii) The spring balance can be used to determine the mass of a small animal without causing harm to the animal.

The animal is placed in a bag. The bag is hung from the spring balance, as shown.

(Source: © Nature Picture Library / Alamy Stock Photo)

The spring extended by 5.8 cm when the bag with the animal was hung from the spring balance.

When the mass of the animal was being determined, the bag started to oscillate with simple harmonic motion.

Calculate the frequency of oscillation of the bag.

(4)

.....

.....

.....

.....

.....

.....

.....

.....

Frequency of oscillation = .....

- (b) When the mass of one animal was being determined, the amplitude of oscillation of the bag was observed to increase to a large value.

Explain this observation.

(2)

.....

.....

.....

.....

(Total for Question 19 = 9 marks)

20 Main sequence stars, such as the Sun, fuse hydrogen into helium.

(a) The Sun emits radiation with a peak intensity at a frequency of  $6.1 \times 10^{14}$  Hz.

(i) Show that the surface temperature of the Sun is about 6000 K.

(3)

.....

.....

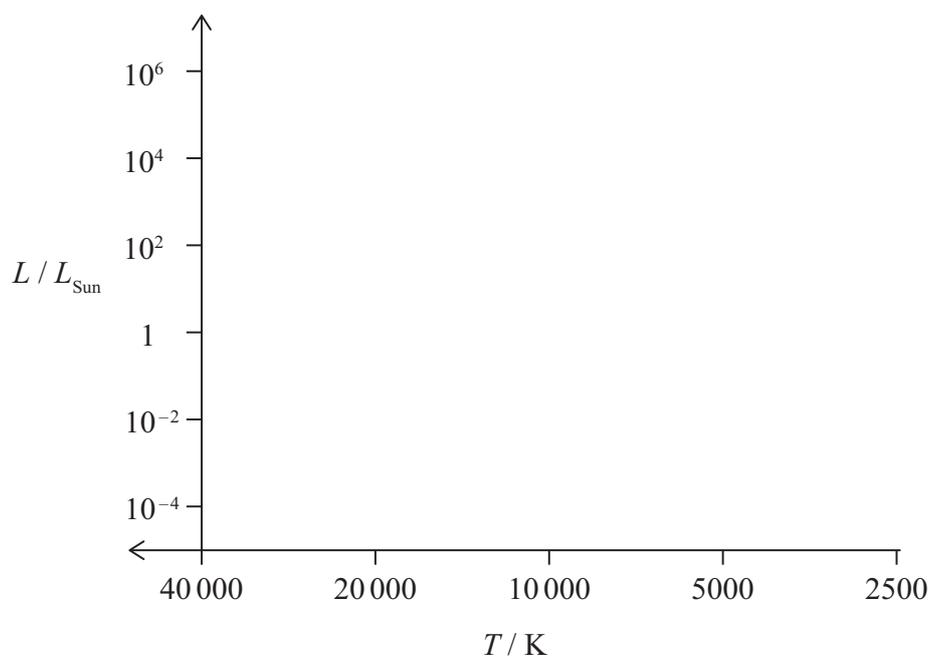

.....

.....

.....

.....

(ii) The Hertzsprung-Russell diagram below is incomplete.

Label the position of the Sun on the diagram with a cross and an S.

(1)

(iii) Add to the diagram to indicate the areas where the following stars are located:

A Main sequence stars

B Red giant stars

C White dwarf stars

You should identify each area clearly using the letters A, B and C.

(3)

### List of data, formulae and relationships

Acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$	(close to Earth's surface)
Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$	
Coulomb's law constant	$k = 1/4\pi\epsilon_0$ $= 8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2}$	
Electron charge	$e = -1.60 \times 10^{-19} \text{ C}$	
Electron mass	$m_e = 9.11 \times 10^{-31} \text{ kg}$	
Electronvolt	$1 \text{ eV} = 1.60 \times 10^{-19} \text{ J}$	
Gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$	
Gravitational field strength	$g = 9.81 \text{ N kg}^{-1}$	(close to Earth's surface)
Permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$	
Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$	
Proton mass	$m_p = 1.67 \times 10^{-27} \text{ kg}$	
Speed of light in a vacuum	$c = 3.00 \times 10^8 \text{ m s}^{-1}$	
Stefan-Boltzmann constant	$\sigma = 5.67 \times 10^{-8} \text{ W m}^{-2} \text{ K}^{-4}$	
Unified atomic mass unit	$u = 1.66 \times 10^{-27} \text{ kg}$	

### Unit 1

#### Mechanics

Kinematic equations of motion	$s = \frac{(u + v)t}{2}$
	$v = u + at$
	$s = ut + \frac{1}{2}at^2$
	$v^2 = u^2 + 2as$

Forces	$\Sigma F = ma$
	$g = \frac{F}{m}$
	$W = mg$

Momentum	$p = mv$
----------	----------

Moment of force	moment = $Fx$
-----------------	---------------

Work and energy	$\Delta W = F\Delta s$
	$E_k = \frac{1}{2}mv^2$
	$\Delta E_{\text{grav}} = mg\Delta h$

Power	$P = \frac{E}{t}$
	$P = \frac{W}{t}$

Efficiency

$$\text{efficiency} = \frac{\text{useful energy output}}{\text{total energy input}}$$

$$\text{efficiency} = \frac{\text{useful power output}}{\text{total power input}}$$

*Materials*

Density

$$\rho = \frac{m}{V}$$

Stokes' law

$$F = 6\pi\eta rv$$

Hooke's law

$$\Delta F = k\Delta x$$

Elastic strain energy

$$\Delta E_{\text{el}} = \frac{1}{2}F\Delta x$$

Young modulus

$$E = \frac{\sigma}{\varepsilon} \text{ where}$$

$$\text{Stress } \sigma = \frac{F}{A}$$

$$\text{Strain } \varepsilon = \frac{\Delta x}{x}$$
