

Mark Scheme (Results)

Summer 2024

Pearson Edexcel International GCSE
In Geography (4WGE1)
Paper 1R: Physical Geography

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Summer 2024

Question Paper Log Number P80201

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Marking guidance for levels-based mark schemes

How to award marks

The indicative content provides examples of how students will meet each skill assessed in the question. The levels descriptors and indicative content reflect the relative weighting of each skill within each mark band.

Finding the right level

The first stage is to decide which level the answer should be placed in. To do this, use a 'best-fit' approach, deciding which level most closely describes the quality of the answer. Answers can display characteristics from more than one level, and where this happens, markers must use the guidance below and their professional judgement to decide which level is most appropriate.

Placing a mark within a level

After a level has been decided on, the next stage is to decide on the mark within the level. The instructions below tell you how to reward responses within a level. However, where a level has specific guidance about how to place an answer within a level, always follow that guidance. Statements relating to the treatment of students who do not fully meet the requirements of the question are also shown in the indicative content section of each levels-based mark scheme. These statements should be considered alongside the levels descriptors.

Markers should be prepared to use the full range of marks available in a level and not restrict marks to the middle. Markers should start at the middle of the level (or the upper-middle mark if there is an even number of marks) and then move the mark up or down to find the best mark. To do this, they should take into account how far the answer meets the requirements of the level:

- if it meets the requirements fully, markers should be prepared to award full marks within the level. The top mark in the level is used for answers that are as good as can realistically be expected within that level
- if it only barely meets the requirements of the level, markers should consider awarding marks at the bottom of the level. The bottom mark in the level is used for answers that are the weakest that can be expected within that level
- the middle marks of the level are used for answers that have a reasonable match to the descriptor. This might represent a balance between some characteristics of the level that are fully met and others that are only barely met.

Question number	Answer	Mark
1(a)	AO1 (1 mark) A (any form of water that falls from the sky) The answer cannot be B (transpiration), C (condensation), D (evaporation).	(1)

Question number	Answer	Mark
1(b)(i)	AO1 (1 mark) B (particles carried in water wear away river bed and banks) The answer cannot be A (solution/corrosion), C (attrition), D (hydraulic action)	(1)

Question number	Answer	Mark
1(b)(ii)	AO1 (1 mark) Award one mark for any of the following: • heavy/more/increased rainfall (1) • antecedent/previous/prolonged rainfall (1) • snowmelt (1) • monsoon (1) • steep relief (1) • impermeable soil/geology (1) • glacial/ice cap melt (1) No credit for deforestation or just stating 'impermeable surface'. Accept any other appropriate response.	(1)

Question number	Answer	Mark
1(b)(iii)	AO1 (1 mark)/AO2 (1 mark) Award 1 mark (AO1) for initial point and a further mark for explanation (AO2) up to a maximum of two marks. • Higher temperatures (during summer months) increase evaporation (1) which reduces discharge (1). • Lower temperatures (in winter months) can increase precipitation/rainfall (1) which increases river flow (1).	

	Freezing temperatures means snow does not melt (1) reducing discharge (1). Accept any other appropriate response.	(2)
--	--	------------

Question number	Answer	Mark
1(c)	AO2 (2 marks)/AO3 (2 marks) Award 1 mark (AO3) for the identification of a difference in river channel and a further mark for explanation (AO2) up to a maximum of two marks each. - River channels at A are narrower than B/C (1) because the river has a lower velocity upstream (1). - River channels are shallower in the uplands than lowlands (1) because they have less energy to erode (1). - River channels get wider between upland and lowland areas (1) because discharge increases as tributaries join (1). - The channel at A is V-shaped but much flatter in lowlands (1) because lateral erosion is more dominant downstream (1). Accept any other appropriate response.	(4)

Question number	Answer	Mark
1(d)	AO3 (1 mark) Award one mark for the following: Ox-bow lake (1)	(1)

Question number	Answer	Mark
1(e)	AO2 (3 mark) Award 1 mark for the initial explanation and 2 marks for further explanation up to a maximum of 3 marks. - Deposition occurs when the river loses energy (1) at its mouth (1) as it comes into contact with waves (1). - Deposition occurs when the river enters shallow areas (1) as there is an increase in friction (with the riverbed) (1) means the river loses energy and drops sediment (1).	

	• Deposition happens on the inner bends of meanders (1) because the water flows more slowly around this bend (1) meaning it does not have enough energy to carry sediment (1). • Deposition occurs when the volume of water decreases (1) during a drought (1) meaning there is not enough energy to carry sediment (1). • Deposition occurs during a flood (when water flows over floodplain) (1) there is increased friction with the ground (1) meaning the water does not have enough energy to carry (large/heavy) sediment (1). No credit for identifying the result of the deposition e.g. stating a slip-off slope is formed. Accept any other appropriate response.	(3)
--	---	------------

Question number	Answer	Mark
1(f)	AO1 (2 marks)/AO2 (2 marks) Award 1 mark (AO1) for the identification of a strategy and a further mark for explanation (AO2) up to a maximum of two marks each. • Flooding can cause damage to buildings (1) which can increase the number of people made homeless (1). • Flooding can damage infrastructure (1) which can prevent people from travelling to work (1). • Businesses can be closed down (1) which leads to an increase in unemployment (1). • Summer flooding can reduce tourist numbers (1) which impacts local economy (1). Accept any other appropriate response.	(4)

Question number	Answer	Mark
1(g)	A03 (4 marks)/A04 (4 marks)	
	Marking instructions Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the level-based mark scheme below. Indicative content guidance The indicative content below is not prescriptive, and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. This question is about analysing the reasons for differences in water quality between countries of contrasting levels of development. Candidates will need to interpret the map to recognise the areas of high/low water quality and suggest which factor is dominant. A03 • Levels of pollution are often highest in urban areas, especially in developing cities. • Agriculture causes pollution as fertilisers and pesticides runoff into rivers affecting levels of nutrients. • Animal waste from farms can enter rivers during heavy rainfall. • Using water to cool machinery often increases water temperature when it is returned affecting the ecosystem. • Industrial plants/oil refineries can leak chemicals and oil into river systems. • Energy production from tar sands/fracking can introduce pollutants to river systems. • Mining for metallic minerals can introduce heavy metals to local water systems. • Untreated sewage can be released into waterways in: developed countries during heavy rainfall / developing countries which lack sewer systems. • In emerging / developing countries rivers can be used for washing clothes and bathing which can contaminate the water. • In developed countries chlorine from water treatment / swimming pools can pollute the water. • The main reason for water pollution in Thailand is due to Industry. • The main contribution to water pollution in Colombia is domestic wastewater. A04 • Figure 1c shows large areas of Europe have low water quality. • Figure 1c shows large areas of central Africa have higher water quality.	(8)

	• Figure 1c shows large areas near Arctic Circle have better water quality. • Figure 1c shows Columbia and Thailand treat a low proportion of their wastewater. • Figure 1c shows Spain treats a high proportion of its wastewater. • Figure 1c shows despite Spain treating a high proportion of its wastewater the region still suffers from poor water quality. • Figure 1c shows agriculture is the smallest contributor for the three countries shown. • Figure 1c shows many developed and emerging countries have poor water quality. • Figure 1c shows many developing countries often have better water quality.	
--	---	--

Question number	Answer	
Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Attempts to apply understanding to deconstruct information but understanding and connections are flawed. An unbalanced or incomplete argument that provides limited synthesis of understanding. Judgements that are supported by limited evidence. (AO3) • Uses some geographical skills to obtain information with limited relevance and accuracy, which supports few aspects of the argument. (AO4)
Level 2	4–6	• Applies understanding to deconstruct information and provide some logical connections between concepts. An imbalanced argument that synthesises mostly relevant understanding, but not entirely coherently, leading to judgements that are supported by evidence occasionally. (AO3) • Uses geographical skills to obtain accurate information that supports some aspects of the argument. (AO4)
Level 3	7–8	• Applies understanding to deconstruct information and provide logical connections between concepts throughout. A balanced, well-developed argument that synthesises relevant understanding coherently, leading to judgements that are supported by evidence throughout. (AO3) • Uses geographical skills to obtain accurate information that supports all aspects of the argument. (AO4)

Question number	Answer	Mark
2(a)	AO1 (1 mark) A (acids in water dissolve rock) The answer cannot be B (transportation), C (biological weathering), D (mechanical weathering).	(1)

Question number	Answer	Mark
2(b)(i)	AO1 (1 mark) B (slumping) The answer cannot be A, C and D are all examples of sediment transport.	(1)

Question number	Answer	Mark
2(b)(ii)	AO1 (1 mark) Award one mark for any of the following: • Short wavelength (1) • Tall in height / steeper gradient / big amplitude (1) • More frequent (1) • Powerful / strong (1) • Erosion / removes sediment (1) • Strong(er) backwash / Weak(er) swash (1) Accept any other appropriate response.	(1)

Question number	Answer	Mark
2(b)(iii)	AO1 (1 mark)/AO2 (1 mark) Award 1 mark (AO1) for identify a type of erosion and a further mark for development (AO2) up to a maximum of two marks. • Hydraulic action / is when the sheer force of water (1) pushing air into cracks in the cliff making them bigger (1). • Sediment carried in the waves (1) are thrown at the cliff face (1). • Abrasion (1) causes pebbles to scrape down cliff face / wearing the rock away (1) • Attrition / is when sediment carried in the waves bump into each other (1) and knock pieces off to become rounder and smaller (1).	

	• Solution/corrosion / is when weak acids in the seawater (1) dissolve soluble particles (1). Accept any other appropriate response.	(2)
--	---	------------

Question number	Answer	Mark
2(c)	AO1 (2 marks)/AO2 (2 marks) Award 1 mark (AO1) for the identification of a factor and a further mark for explanation (AO2) up to a maximum of two marks each. • The structure of the cliff (if there is an underlying impermeable layer of rock) (1) with a permeable layer sitting on top water can collect (at the boundary between rock types) leading to sliding/slumping (1). • Saturated permeable rock (1) increases the weight causing the slope to slide/slump (1). • Undercutting (of the cliff at the base) (1) can lead to rock collapsing as nothing is holding it up (1). • Removal of vegetation (1) the plant roots no longer bind the soil together (making it more likely to slide) (1). • Geology with no cracks/faults (1) reduce the likelihood of mass movement as there are no weak points (1). Accept any other appropriate response.	(4)

Question number	Answer	Mark
2(d)	A02 (3 mark) Award 1 mark for stating a characteristic and 2 marks for further explanation up to a maximum of 3 marks. • Sand dunes occur where there is a wide beach (1) as this provides large quantities of sand (1) which are needed for net accumulation to occur (1). • A pioneer species / Marram grass (1) can survive the harsh conditions (1) creating better quality soil (1). • Sand dune ecosystems often show plant succession (1) as pioneer species survive the harsh conditions nearest the shore (1) helping to create more fertile soil (allowing more complex plants to grow) (1). • Sand dunes occur where there is a prevailing onshore wind (1) which is needed to blow sand from offshore bars (onto the shore) (1) as a source of sediment	

	supply (1). • Xerophytes (1) survive arid conditions stabilising the sand (1) allowing better quality soil to develop (1). • Pioneer species / Marram grass (1) bind sand/soil together (1) which helps to stabilise the dune (1). • Sand dunes require an obstacle (1) to allow some sand to accumulate (1) which allows the sand dune to grow/stabilise (1). • Sand dunes run parallel to the coast (1) when there is a large supply of sand available (on an offshore bar) (1) and an onshore prevailing wind (1). Accept any other appropriate response.	(3)
--	---	------------

Question number	Answer	Mark
2(e)	AO2 (2 marks)/AO3 (2 marks) Award 1 mark (AO3) for the identification of a reason why soft engineering is suitable based on evidence from resource and a further mark for explanation (AO2) up to a maximum of two marks each. • There is a rural area which has a low economic value (1) which would cost more to protect than it is worth (1). • There is an area of saltmarsh which will be destroyed (1) if it is no longer covered by high tides. • There are not many buildings which mean little compensation needed (1) meaning local people will not oppose the strategy (1). • Lots of the buildings are farms (1) which have a lower economic value (1). • This area is a very natural environment and soft engineering works with natural processes (1) which is more sustainable. Accept any other appropriate response.	(4)

Question number	Answer	Mark
2(f)	AO3 (1 mark) Award one mark for the following: • Stack (1)	(1)

Question number	Answer	Mark
2(g)	A03 (4 marks)/A04 (4 marks) Marking instructions Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the level-based mark scheme below. Indicative content guidance The indicative content below is not prescriptive, and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. This question is about analysing the different reasons why some developed countries are less at risk from coastal flooding than others. Candidates will need to be able to identify the areas at less risk and make judgements about why this is the case. A03 • Coastal flooding is when dry low-lying land is submerged by seawater. • Although severity of storm surges is likely to increase this is not going to impact every coastline. Coastlines outside tropical areas with short fetches are likely to have less increase in severe storm surges. • Sea levels are predicted to rise due to melting ice sheets caused by increases in global temperatures but this is not equal for all coastlines as some are relatively high above sea level compared to other areas. • Coastlines with tall cliff faces made from resistant rock are less at risk of coastal flooding. • Coastal environments, such as mangroves and coral reefs, act as offshore barriers to storms which can reduce the risk of coastal flooding. • Some areas have slow growing populations which means the number of people at risk are not increasing/increasing slowly. • Countries may have more money to spend on coastal protection. • Countries may opt for more hard engineering techniques which are expensive but more effective. • Governments may have more tax revenue to spend on coastal protection. • Developed countries are at lowest risk of coastal flooding. • The main reason for the lower risk is the percentage of populations living in low-lying coastal areas in developed countries. A04 • Most developed countries have fairly low risk to people with the exception of Japan and the Netherlands. • There is a cluster of European countries at some risk	(8)

	of coastal flooding. • Australia has the lowest predicted sea level rise of 1.8 mm per year. • Canada has the lowest percentage of population living in low-lying coastal areas (1%). • Spain spends the most on coastal protection - \$2.8 billion.	
--	---	--

Question number	Answer	
Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Attempts to apply understanding to deconstruct information but understanding and connections are flawed. An unbalanced or incomplete argument that provides limited synthesis of understanding. Judgements that are supported by limited evidence. (AO3) • Uses some geographical skills to obtain information with limited relevance and accuracy, which supports few aspects of the argument. (AO4)
Level 2	4–6	• Applies understanding to deconstruct information and provide some logical connections between concepts. An imbalanced argument that synthesises mostly relevant understanding, but not entirely coherently, leading to judgements that are supported by evidence occasionally. (AO3) • Uses geographical skills to obtain accurate information that supports some aspects of the argument. (AO4)
Level 3	7–8	• Applies understanding to deconstruct information and provide logical connections between concepts throughout. A balanced, well-developed argument that synthesises relevant understanding coherently, leading to judgements that are supported by evidence throughout. (AO3) • Uses geographical skills to obtain accurate information that supports all aspects of the argument. (AO4)

Question number	Answer	Mark
3(a)	AO1 (1 mark) D (strong winds) Answer cannot be A (earthquake), B (earthquake), C (earthquake)	(1)

Question number	Answer	Mark
3(b)(i)	AO1 (1 mark) B (hot plumes of magma break through crust away from plate boundaries) Answer cannot be A (super volcano), C (shield), D (composite).	(1)

Question number	Answer	Mark
3(b)(ii)	AO1 (1 mark) Award one mark for any of the following: • Volcanic Explosivity Index / VEI (1)	(1)

Question number	Answer	Mark
3(b)(iii)	AO1 (1 mark)/AO2 (1 mark) Award 1 mark (AO1) for initial point and a further mark for development (AO2) up to a maximum of two marks. • Volcanoes need a source of magma (1) which is not present as two plates move past each other (1). • Plates slide past each other (1) which means neither tectonic plate is destroyed (1). • Volcanoes occur where a tectonic plate is destroyed (1) which does not happen when two plates slide past each other (in opposite directions) (1). Accept any other appropriate response.	(2)

Question number	Answer	Mark
3(c)	AO1 (2 marks)/AO2 (2 marks) Award 1 mark (AO1) for identifying a strategy/factor and a further mark explanation (AO2) up to a maximum of two marks each.	

	• Emergency services (1) are less well trained / take longer to rescue people (1). • Reliance on international aid (1) means supplies take longer to arrive (1). • Tents are most common type of shelter (1) which provide little protection from the elements/weather (1). • Poor communication / lack of mobile phones (radios) (1) make it difficult to co-ordinate the emergency response (1). Accept any other appropriate response.	(4)
--	---	------------

Question number	Answer	Mark
3(d)	A02 (3 mark) Award 1 mark for a factor and 2 marks for further explanation up to a maximum of 3 marks. • Some areas have high quality building infrastructure (1) which reduces the numbers of building collapse (1) which reduces risk of death/injury (1). • Cheaper to live (1) even though people are aware of the risk (1) they have no choice but to stay (1). • People may be aware of the risk but choose to live there anyway (1) as they are close to their family (1) which improves peoples mental health (1). • Being educated (1) means people are aware of the risk (1) which means people have earthquake kits prepared (1). • People may not be able to afford to move away (1) because unemployment rates are high (1) and they worry they will not find a job elsewhere (1). Accept any other appropriate response.	(3)

Question number	Answer	Mark
3(e)	A03 (1 mark) Award one mark for the following: • Ash (cloud) (1)	(1)

Question number	Answer	Mark
3(f)	Award 1 mark (AO3) for the identification of a factor based on evidence from resource and a further mark for explanation (AO2) up to a maximum of two marks each. • Tropical cyclones are found near the equator (in areas of warm ocean water) (1) because this fuels high evaporation rates (1). • Tropical cyclones are found between the Tropics (1) as the water is 27°C (1). • There are no tropical cyclones directly at the equator (1) because there is no Coriolis force (1). • All tropical cyclones travel in the same direction (from east to west) (1) as a result of the trade winds (1). • All tropical cyclones begin in the middle of oceans (1) because this supplies their energy (1). • All tropical cyclones do not remain where they form (1) as they follow in the direction of prevailing wind/ocean currents (1). • Tropical cyclones are found in the Caribbean (1) as the water is 27°C (1). Do not credit direct mirrors. Accept any other appropriate response.	(4)

Question number	Answer	Mark
3(g)	A03 (4 mark)/A04 (4 mark) Marking instructions Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the level-based mark scheme below. Indicative content guidance The indicative content below is not prescriptive, and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. This question is about analysing the significance of different types of impacts tropical cyclones can have on the environment. Candidates will need to be able to identify the different types of impacts and consider the most severe impact for the environment. A03 • Shorter term impacts often last for hours, days, weeks. • Longer term impacts often last for months, years,	(8)

	decades. • A range of tropical cyclone hazards, strong winds, heavy rainfall, flooding can have an impact on the environment. • Coral reefs and mangroves are specially adapted to their environments and can be damaged by changes in salinity and turbidity. • Mangrove trees have roots which need to be exposed to the air but tropical cyclones can increase sea levels killing mangrove vegetation. • Animals living in mangrove vegetation/coral reefs can lose their habitat. • Risk of drought can be reduced as a result of increased precipitation. • Destruction of mangroves will make them less effective at protecting from future tropical cyclones. A04 • Figure 3c shows large areas for Florida were at risk of drought before the hurricane. • Figure 3c shows only the SE tip of Florida was not at risk of drought before the hurricane. • Figure 3c shows almost all of Florida was not at risk of drought after the hurricane. • Figure 3c shows only a small area in the SW of Florida was at risk of drought after the hurricane. • Figure 3c shows large areas of dead trees. • Figure 3c shows 40% of mangroves in the Everglades was destroyed. • Figure 3c shows 850 stork nests were present before the Hurricane. • Figure 3c shows all stork nests were destroyed after the hurricane.	
--	--	--

Question number	Answer	
Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Attempts to apply understanding to deconstruct information but understanding and connections are flawed. An unbalanced or incomplete argument that provides limited synthesis of understanding. Judgements that are supported by limited evidence. (A03) • Uses some geographical skills to obtain information with limited relevance and accuracy, which supports few aspects of the argument. (A04)

Level 2	4–6	• Applies understanding to deconstruct information and provide some logical connections between concepts. An imbalanced argument that synthesises mostly relevant understanding, but not entirely coherently, leading to judgements that are supported by evidence occasionally. (AO3) • Uses geographical skills to obtain accurate information that supports some aspects of the argument. (AO4)
Level 3	7–8	• Applies understanding to deconstruct information and provide logical connections between concepts throughout. A balanced, well-developed argument that synthesises relevant understanding coherently, leading to judgements that are supported by evidence throughout. (AO3) • Uses geographical skills to obtain accurate information that supports all aspects of the argument. (AO4)

Question number	Answer	Mark
4(a)(i)	AO1 (1 mark) B (information collected by other people) Cannot be A, C or D (primary data)	(1)

Question number	Answer	Mark
4(a)(ii)	AO1 (1 mark) Award one mark for the following: • Field sketch (1) • Photograph (1) • Open question survey/questionnaire (1) • Interviews/focus groups (1) Accept any other acceptable response.	(1)

Question number	Answer	Mark
4(b)	A03 (1 mark)/AO4 (1 mark) Award 1 mark (AO4) for initial point and a further mark for development (AO3) up to a maximum of two marks. • There is a risk of slipping (on rocks on the riverbed) (1) which can cause injury (1). • There is a risk of cutting hand (on rocks) (1) which can cause infection (1). • Standing in cold water (1) as it can lead to hypothermia (1). Accept any other acceptable response.	(2)

Question number	Answer	Mark
4(c)	AO4 (2 marks) Award 1 mark for correct method of working with correct figures and 1 mark for correct answer. 5 , 12 , 17 , 20 , 21 , 31 , 31 , 40 , 40 $21 + 31 = 52 / 2 = 26$ Answer = 26 cm	(2)

Question number	Answer	Mark																						
4(d) (i)	AO4 (2 marks) Award 1 mark for each correct plot. <table><caption>Bar Chart Data: Average river depth (cm) by Site</caption><thead><tr><th>Site</th><th>Average river depth (cm)</th></tr></thead><tbody><tr><td>1</td><td>5</td></tr><tr><td>2</td><td>7</td></tr><tr><td>3</td><td>10</td></tr><tr><td>4</td><td>15</td></tr><tr><td>5</td><td>24</td></tr><tr><td>6</td><td>58</td></tr><tr><td>7</td><td>32</td></tr><tr><td>8</td><td>36</td></tr><tr><td>9</td><td>39</td></tr><tr><td>10</td><td>42</td></tr></tbody></table>	Site	Average river depth (cm)	1	5	2	7	3	10	4	15	5	24	6	58	7	32	8	36	9	39	10	42	(2)

Question number	Answer	Mark
4(d) (ii)	AO4 (1 mark) Award one mark for the following: • (Site) 6 (1)	(1)

Question number	Answer	Mark
4(d) (iii)	AO4 (3 marks) Award 1 mark (AO4) for initial point and further marks for evidence (AO4) up to a maximum of three marks. • Human error (1) where the student has not held the meter ruler vertical (1) increasing the depth data (1). • The student may not have held the ruler perfectly vertical (1) this will have increased the number on the ruler (1) leading to the incorrect depth being recorded (1). • The student may have collected data from a river cliff (1) leading to higher erosion than normal (1) increasing the depth of data recorded (1). • The student may have collected data in an area of high littering forming a dam (1) this would have formed a	

	pool of water behind the dam (1) increasing the depth of the water in the channel (1). Uneven riverbed (due to rocks) (1) causes ruler to be placed in a hollow (1) which increases data recorded for depth (1). Accept any other acceptable response.	(3)
--	--	-----

Question number	Answer	Mark
4(e)	A03 (4 mark)/A04 (4 mark) Marking instructions Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the level-based mark scheme below. Indicative content guidance The indicative content below is not prescriptive, and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. This question is about evaluating the reliability of the students own conclusions. The candidate needs to evaluate the strengths and weaknesses of several sets of data in order to determine the reliability and accuracy of their conclusion. This should include judgement on influence of anomalies and the extent to which data fits known theories or trends. A03 - Accuracy is about how correct or incorrect the data written down is. - Reliability is about how dependable the data is and often relates to having a big enough sample size to reach a conclusion. - Conclusions can be determined by the extent to which the results fit a geographical theory. - Data collection techniques are very important in determining accuracy of conclusions. - There are different sampling strategies which have a range of advantages and disadvantages that need to be considered when reaching a conclusion. - Consideration of different equipment errors and the impact these might have had on accuracy of data. - Consideration of ways the accuracy of the conclusions could have been improved. - Conclusions should make a judgement about the presence of anomalies and whether they be included or excluded from the analysis. - A judgement about which techniques were reliable and/or accurate. - A judgement about overall accuracy of conclusion drawn. A04	(8)

	• Detail about overall conclusions drawn from own enquiry. • Detail about the specific sampling strategies used of their own data collection techniques. • Detail about the site selection for enquiry. • Detail about the sample size for each set of data collected. • Detail about the equipment used for each technique. • Detail about rationale for taking more than one reading for a data type. • Detail about anomalies in own results.	
--	--	--

Question number	Answer	
Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Attempts to apply understanding to deconstruct information but understanding and connections are flawed. An unbalanced or incomplete argument that provides limited synthesis of understanding. Judgements that are supported by limited evidence. (AO3) • Uses some geographical skills to obtain information with limited relevance and accuracy, which supports few aspects of the argument. (AO4)
Level 2	4–6	• Applies understanding to deconstruct information and provide some logical connections between concepts. An imbalanced argument that synthesises mostly relevant understanding, but not entirely coherently, leading to judgements that are supported by evidence occasionally. (AO3) • Uses geographical skills to obtain accurate information that supports some aspects of the argument. (AO4)
Level 3	7–8	• Applies understanding to deconstruct information and provide logical connections between concepts throughout. A balanced, well-developed argument that synthesises relevant understanding coherently, leading to judgements that are supported by evidence throughout. (AO3) • Uses geographical skills to obtain accurate information that supports all aspects of the argument. (AO4)

Question number	Answer	Mark
5(a)(i)	AO1 (1 mark) B (information collected by other people) Cannot be A, C or D (primary data)	(1)

Question number	Answer	Mark
5(a)(ii)	AO1 (1 mark) Award one mark for the following: • Field sketch (1) • Photograph (1) • Open question survey/questionnaire (1) • Interviews/focus groups (1) Accept any other acceptable response.	(1)

Question number	Answer	Mark
5(b)	AO3 (1 mark)/AO4 (1 mark) Award 1 mark (AO4) for initial point and a further mark for development (AO3) up to a maximum of two marks. • There is a risk of slipping (on rocks) (1) which can cause injury (1). • There is a risk cutting hand (on rocks) (1) which can cause infection (1). • Big / powerful / destructive waves (1) could cause you to be swept away / knocked over (1). • Rising tide (1) increases risk of being cutoff/stranded (1). Accept any other acceptable response.	(2)

Question number	Answer	Mark
5(c)	A04 (2 marks) Award 1 mark for correct method of working with correct figures and 1 mark for correct answer. 2 , 2 , 3 , 4 , 8 , 12 , 15 , 15 , 15 , 20 $8 + 12 = 20 / 2 = 10$ Answer = 10°	(2)

Question number	Answer	Mark																						
5(d) (i)	A04 (2 marks) Award 1 mark for each correct plot. <table><caption>Data for Bar Chart: Average pebble size (cm) by Site</caption><thead><tr><th>Site</th><th>Average pebble size (cm)</th></tr></thead><tbody><tr><td>1</td><td>1</td></tr><tr><td>2</td><td>3</td></tr><tr><td>3</td><td>6</td></tr><tr><td>4</td><td>8</td></tr><tr><td>5</td><td>10</td></tr><tr><td>6</td><td>28</td></tr><tr><td>7</td><td>14</td></tr><tr><td>8</td><td>15</td></tr><tr><td>9</td><td>17</td></tr><tr><td>10</td><td>18</td></tr></tbody></table>	Site	Average pebble size (cm)	1	1	2	3	3	6	4	8	5	10	6	28	7	14	8	15	9	17	10	18	(2)

Question number	Answer	Mark
5(d) (ii)	A04 (1 mark) Award one mark for the following: (Site) 6 (1)	(1)

Question number	Answer	Mark
5(d) (iii)	AO4 (3 marks) Award 1 mark (AO4) for initial point and further marks for evidence (AO4) up to a maximum of three marks. - The student may have been inconsistent with which pebble axis was measured (1) this could have meant it was not always the longest side measured (1) leading to incorrect data (1). - The student may not have been accurate when placing the 0 on the ruler against the pebble (1) this would have caused a bigger number to be recorded (1) in error (1). - The student may have chosen pebbles which were easiest to measure (1) this would have reduced the reliability of the sample (1) leading to inconsistent data being recorded (1). Accept any other acceptable response.	(3)

Question number	Answer	Mark
5(e)	AO3 (4 mark)/AO4 (4 mark) Marking instructions Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the level-based mark scheme below. Indicative content guidance The indicative content below is not prescriptive, and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. This question is about evaluating the reliability of the students own conclusions. The candidate needs to evaluate the strengths and weaknesses of several sets of data in order to determine the reliability and accuracy of their conclusion. This should include judgement on influence of anomalies and the extent to which data fits known theories or trends. AO3 - Accuracy is about how correct or incorrect the data written down is. - Reliability is about how dependable the data is and often relates to having a big enough sample size to reach a conclusion. - Conclusions can be determine the extent to which the results fit a theory. - Data collection techniques are very important in determining accuracy of conclusions. - There are different sampling strategies which have a	(8)

	range of advantages and disadvantages that need to be considered when reaching a conclusion. • Consideration of different equipment errors and the impact these might have had on accuracy of data. • Consideration of ways the accuracy of the conclusions could have been improved. • Conclusions should make a judgement about the presence of anomalies and whether they be included or excluded from the analysis. • A judgement about which techniques were reliable and/or accurate. • A judgement about overall accuracy of conclusion drawn. AO4 • Detail about overall conclusions drawn from own enquiry. • Detail about the specific sampling strategies used of their own data collection techniques. • Detail about the site selection for enquiry. • Detail about the sample size for each set of data collected. • Detail about the equipment used for each technique. • Detail about rationale for taking more than one reading for a data type. • Detail about anomalies in own results.

Question number	Answer	
Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Attempts to apply understanding to deconstruct information but understanding and connections are flawed. An unbalanced or incomplete argument that provides limited synthesis of understanding. Judgements that are supported by limited evidence. (AO3) • Uses some geographical skills to obtain information with limited relevance and accuracy, which supports few aspects of the argument. (AO4)
Level 2	4–6	• Applies understanding to deconstruct information and provide some logical connections between concepts. An imbalanced argument that synthesises mostly relevant understanding, but not entirely coherently, leading to judgements that are supported by evidence occasionally. (AO3) • Uses geographical skills to obtain accurate information that supports some aspects of the argument. (AO4)
Level 3	7–8	• Applies understanding to deconstruct information and provide logical connections between concepts throughout. A balanced, well-developed argument that synthesises relevant

		understanding coherently, leading to judgements that are supported by evidence throughout. (AO3) • Uses geographical skills to obtain accurate information that supports all aspects of the argument. (AO4)
