Module Overview

This module identifies and describes strength/spacing requirements, types, and installation of pipe hangers, supports, restraints, and guides. It covers earthquake bracing, sleeving, and firestopping. Cutting hangers to specified lengths is also included.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed the Core Curriculum and Sprinkler Fitting Level One.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify and describe strength requirements of pipe hangers, supports, restraints, and guides.
2. Identify and describe spacing requirements of pipe hangers, supports, restraints, and guides.
3. Identify and describe types of pipe hangers, supports, restraints, and guides.
4. Install pipe hangers, supports, restraints, guides, and anchors.
5. Identify and explain types of earthquake bracing.
6. Install earthquake bracing.
7. Describe and explain sleeving and firestopping.
8. Cut a hanger rod to a specified length.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to do the following:

1. Install a drop-in anchor.
2. Install a hanger on a wood joist.
3. Make up and install an earthquake brace.
4. Cut a hanger rod to a specified length.

Materials and Equipment

Multimedia projector and screen

Sprinkler Fitting Level Two

PowerPoint® Presentation Slides

Computer

Whiteboard/chalkboard

Markers/chalk

Pencils and scratch paper

Appropriate personal protective equipment

Various pipe supports and attachments:

Ceiling flanges

U-bolts

Toggle bolts

Pipe stands

Riser clamps

Various types of hangers for wood:

Lag bolts and coach screw rods

Drive screws

Specialty fasteners

U-hooks

Various types of concrete fasteners:

Concrete inserts

Expansion shields and drop-in anchors

Powder-driven tool training program (optional)

Powder-driven tools and accessories (optional)

NFPA 13

Earthquake bracing

Mechanical firestoppers

continued
Safety Considerations

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module may require that the trainees visit job sites. Ensure that trainees are briefed on site safety policies prior to any site visits. This module requires trainees to work with pipe hangers and supports. Ensure all trainees are briefed on hand tool safety and shop safety procedures. This module may require trainees to work with powder-driven tools. Ensure all trainees are briefed on appropriate safety procedures.

Additional Resources

This module presents thorough resources for task training. The following resource material is suggested for further study.

*Pipe Hanger Catalog. Portsmouth, NH: Anvil International Inc.*

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 15 hours are suggested to cover *Hangers, Supports, Restraints, and Guides*. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

Session VI. Review and Testing

A. Review

B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.

C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.
Module Overview

This module covers the various types of valves and valve applications used in the sprinkler industry, including service procedures for standard valves. The trainee learns how to install OS&Y valves, butterfly grooved valves, and tamper switches. Procedures to disassemble, service, and reassemble check valves are also included.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed Core Curriculum; Sprinkler Fitting Level One; and Sprinkler Fitting Level Two, Module 18201-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify the basic types of valves.
2. Demonstrate the ability to service different types of valves.
3. Define the general purpose of a backflow preventer.
4. Install outside screw and yoke (OS&Y) valves.
5. Install a tamper switch.
6. Install butterfly grooved valves.
7. Disassemble, service, and reassemble a check valve.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to do the following:

1. Install outside screw and yoke (OS&Y) valves.
2. Install a tamper switch.
3. Install butterfly grooved valves.
4. Disassemble, service, and reassemble a check valve.

continued
Safety Considerations

Ensure that trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module may require trainees to visit construction sites or utility areas. Ensure that they are briefed on site safety procedures. This module requires trainees to work with hand tools and valves. Ensure that all trainees are properly briefed on hand tool and lifting safety.

Additional Resources

This module presents thorough resources for task training. The following resource material is suggested for further study.

* American Water Works Association (AWWA), Denver, CO.

Pipe thread compound
Mechanical fasteners
Lubricant
Replacement discs
Gasket material
Basic sprinkler fitter’s tools
Wrenches

* Located at the back of this module
** Single-module AIG purchases include the printed exam and performance task sheet. If you have purchased the perfect-bound version of this title, download these materials from the IRC using your access code.
An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 15 hours are suggested to cover General Purpose Valves. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of trainees may be noted during these exercises for Performance Testing purposes.

Module Overview

This module explains basic math principles and how to solve everyday problems, including converting quantities from the English system to the metric system and vice versa. It covers specific sprinkler fitting problems such as calculating 45-degree offsets and tank volume; centering sprinkler heads using the target, square offset, and geometric methods; and problems relating to changes in elevation, sprinkler discharge, and hanger sizing.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed the Core Curriculum; Sprinkler Fitting Level One; and Sprinkler Fitting Level Two, Modules 18201-07 and 18202-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Use basic math principles to solve problems.
2. Convert fundamental measurement quantities from the English system to the metric system, and from metric to English.
3. Recognize the effects of temperature on sprinkler systems.
4. Use temperature scales to solve sprinkler rating problems.
5. Calculate 45-degree offsets and tank volume.
6. Center sprinkler heads using the target, square offset, and geometric methods.
7. Solve sprinkler system problems relating to changes in elevation, sprinkler discharge, and hanger sizing.

Performance Task

Under the supervision of the instructor, the trainee should be able to do the following:

1. Fill in a time sheet.

Materials and Equipment

Multimedia projector and screen
Computer
Whiteboard/chalkboard
Markers/chalk
Pencils and scratch paper
Measuring devices
Graph paper
Containers to demonstrate units of measure:
  Bottle of oil or soda
Paper

Scissors
Rulers (English and metric)
Architect’s rule
Measuring tape
Temperature-pressure chart
Scientific calculator
Pressure gauges with SI and English units
Tables commonly used by sprinkler fitters
Thermometers

Session VIII. Review and Testing

A. Review

B. Module Examination

1. Trainees must score 70% or higher to receive recognition from NCCER.
2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.

C. Performance Testing

1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.
Module Overview

This module explains how to read the drawing legend and identify drawing symbols including common structural and standard sprinkler system symbols. It covers how to read drawings to identify materials, calculate the square footage and number of sprinklers required, lay out sprinkler hanger locations, and identify sprinkler orifice sizes from drawings. It includes how to identify pipe sizes and cut lengths shown on installation drawings.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed the Core Curriculum, Sprinkler Fitting Level One; and Sprinkler Fitting Level Two, Modules 18201-07 through 18203-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify common structural symbols on a shop drawing.
2. Identify cut lengths and sizes of pipe on an installation drawing.
3. Identify the materials to perform an installation from drawings.
4. Identify standard sprinkler system symbols.
5. Interpret a legend and calculate the number of sprinklers to be used in an installation.
6. Identify the orifice size of a sprinkler from drawings.
7. Identify the temperature rating of a sprinkler from a drawing.
8. Calculate the square footage and the number of sprinklers required for a given area.
9. Identify and match the NFPA standards to the title.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to do the following:

1. Interpret a legend.
2. Calculate the number of sprinklers to be used in an installation.
3. Calculate the square footage and the number of sprinklers required for a given area.
4. Lay out sprinkler hanger locations.

   2. Record the testing results on Training Report Form 200, and submit the results
      to the Training Program Sponsor.
Module Overview

This module explains obstructed and unobstructed sprinkler installations. Standard spray sprinklers are discussed relative to occupancies and maximum coverage calculations. Sprinkler spacing is calculated using the small room rule and the protection area rule. Identification of spray sprinklers using a sprinkler identification number (SIN) is also covered.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed the Core Curriculum; Sprinkler Fitting Level One; and Sprinkler Fitting Level Two, Modules 18201-07 through 18204-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify unobstructed and obstructed construction on a drawing and explain why these construction types are obstructed or unobstructed.
2. Calculate maximum coverage area of standard sprinklers for various occupancies.
3. Calculate spacing using the small room rule.
4. Determine sprinkler temperatures by examining different sprinklers.
5. Calculate the maximum spacing of sidewall sprinklers using the protection area rule.
6. Referencing a sprinkler identification number (SIN), identify the manufacturer and sprinkler type.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to do the following:

1. Calculate maximum coverage area of standard sprinklers for various occupancies.
2. Calculate spacing using the small room rule.
3. Calculate the maximum spacing of sidewall sprinklers using the protection area rule.

Session VIII. Review and Testing

A. Review

B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.

C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.
Module Overview

This module explains the purpose, function, and operations of wet system components. It describes riser check valves, alarm check valves, and trim; flow, tamper, and pressure switches; fire department connections and hose stations; antifreeze systems; faulty pressure gauges; inspector’s test connections and auxiliary drains; and hydrostatic testing and test pumps. The trainee learns how to trim an alarm check valve, perform a hydrostatic test, calculate the specific gravity of an antifreeze solution, and complete a contractor’s materials and test certificate.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed the Core Curriculum; Sprinkler Fitting Level One; and Sprinkler Fitting Level Two, Modules 18201-07 through 18205-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Describe riser check, alarm check valves, and trim.
2. Trim an alarm check valve and replace the faceplate gasket.
3. Identify and describe flow switches, tamper switches, and pressure switches.
4. Install a tamper switch and a flow switch and set the retard device on a flow switch.
5. Identify and explain fire department connections and hose stations.
6. Explain inspector’s test connections and auxiliary drains.
7. Explain hydrostatic testing and test pumps.
8. Perform a hydrostatic test using a pump.
9. Describe antifreeze systems.
10. Calculate the specific gravity of an antifreeze solution.
11. Complete a contractor’s material and test certificate.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to do the following:

1. Trim an alarm check valve and replace the faceplate gasket.
2. Install a flow switch and set the retard device.
3. Perform a hydrostatic test using a pump.
4. Calculate the specific gravity of an antifreeze solution.
5. Complete a contractor’s material and test certificate.
6. Identify a faulty pressure gauge and replace it.

Materials and Equipment

- Multimedia projector and screen
- Computer
- Whiteboard/chalkboard
- Markers/chalk
- Pencils and scratch paper
- Appropriate personal protective equipment
- Wall-mounted fire department connection
- Hose station components and accessories
- Manufacturer’s literature on hose stations
- Inspector’s test connection
- Sprinkler fitter hand tools
- Hole saw
- Drill
- Catch basin
- Continuity tester
- Hydrometer
- Fluid measuring device
Safety Considerations

Ensure that trainees are equipped with appropriate personal protective equipment and know how to use it properly. Emphasize basic site safety. This module may require trainees to visit job sites. Make sure that all trainees are briefed on site safety procedures. This module requires trainees to perform a hydrostatic test. Ensure all trainees are properly briefed on safety procedures. This module requires trainees to work with valves. Ensure all trainees are briefed on proper tool and lifting safety.

Additional Resources

This module presents thorough resources for task training. The following resource material is suggested for further study.

Teaching Time for This Module

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 25 hours are suggested to cover Wet Fire Sprinkler Systems. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of trainees may be noted during these exercises for Performance Testing purposes.

Sessions VII and VIII. Hydrostatic Testing; Test Pumps

A. NFPA 13 Requirements

B. Laboratory
   Have trainees practice completing a contractor’s material and test certificate. This laboratory corresponds to Performance Task 5.

C. Purpose of Testing

D. System Inspection

E. Preliminary Testing

F. Testing Hazards

G. Test Pumps

H. Testing Procedures

I. Laboratory
   Have trainees practice performing a hydrostatic test using a pump. This laboratory corresponds to Performance Task 3.

Session IX. Antifreeze Systems; Troubleshooting

A. Antifreeze System Components and Limitations

B. Filling the Antifreeze System

C. System Maintenance

D. Laboratory
   Have trainees practice calculating the specific gravity of an antifreeze solution. This laboratory corresponds to Performance Task 4.

E. Troubleshooting

F. Laboratory
   Have trainees practice identifying a faulty pressure gauge and replacing it. This laboratory corresponds to Performance Task 6.

G. Summary

Session X. Review and Testing

A. Module Review

B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.

C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Training Report Form 200, and submit the results to the Training Program Sponsor.
Module Overview

This module explains the purpose, function, and operation of components used in a dry-pipe system. It discusses dry-pipe valves and trim, air supplies, accelerators and exhausters, and fire department connections. It covers installation of pressure gauges on alarm valves and accelerators, setting up and adjusting air maintenance devices, and resetting and troubleshooting dry-pipe systems. Dry-pipe pitch is also covered.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed: Core Curriculum; Sprinkler Fitting Level One; and Sprinkler Fitting Level Two, Modules 18201-07 through 18206-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify and explain dry-pipe systems and why and where dry-pipe systems are used.
2. Identify dry-pipe valves and trim.
3. Install pressure gauges on an alarm valve.
4. Identify and explain air supplies.
5. Identify and explain accelerators and exhausters.
6. Perform an installation of an accelerator.
7. Explain why an exhauster is a quick-opening device (QOD) and identify possible locations where an exhauster could be installed in a dry-pipe system.
8. Explain pitching sprinkler piping and auxiliary drains in dry-pipe systems.
9. Calculate pitch for dry-pipe systems.
10. Identify and explain fire department connections with respect to dry-pipe systems.
11. Install, set, and adjust an air maintenance device.
12. Reset and troubleshoot a dry-pipe system.
13. Remove and install a faceplate and faceplate gasket.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to do the following:

1. Fill out an Aboveground Test Certificate for a hydrostatic test.
2. Install pressure gauges on an alarm valve.
3. Perform an installation of an accelerator.
4. Calculate pitch for dry-pipe systems.
5. Connect an air compressor to a dry-pipe system.
6. Reset and troubleshoot a dry-pipe system.
7. Remove and install a faceplate gasket.

Materials and Equipment

Multimedia projector and screen
Sprinkler Fitting Level Two PowerPoint® Presentation Slides
Computer
Whiteboard/chalkboard
Markers/chalk
Pencils and scratch paper
Appropriate personal protective equipment
Dehydrators
Compressors
Fire department connections
Inspector’s test valve
Dry valve spare parts

continued
Drum drip components
Shop air system
Air tanks
Nitrogen tanks
Trainee hand tools
Dry-pipe valve trim
Dry-pipe assembly
Hydrostatic test equipment
Exhausters
Accelerators
Manufacturer’s instructions for accelerators
Quick-opening device
Hard hat
Hand test pump
Caps and plugs
Inspector’s test connection
Gaskets
Gauges
Alarms
Rubber clapper seal

Catch basin
Clean rag
Fine steel wool
Emery board
Valve wrench
Gate wrench
Anti-flood device
Valve and drum drips
Various types of switches
Sample dry-pipe valves and drips
Sample dry-pipe system
Test certificates
NFPA 13
NFPA 25
Air maintenance devices
Air compressors

**Single-module AIG purchases include the printed exam and performance task sheet. If you have purchased the perfect-bound version of this title, download these materials from the IRC using your access code.

Safety Considerations

Ensure that trainees are equipped with appropriate personal protective equipment and know how to use it properly. Emphasize basic site safety. This module may require trainees to visit job sites. Make sure that all trainees are briefed on site safety procedures. This module requires trainees to work with pressure gauges and air supply equipment. Ensure all trainees are briefed on proper tool and lifting safety.

Additional Resources

This module presents thorough resources for task training. The following resource material is suggested for further study.

Teaching Time For This Module

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2 1/2 hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 25 hours are suggested to cover Dry-Pipe Systems. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of trainees may be noted during these exercises for Performance Testing purposes.

Sessions VII and VIII. Fire Department Connections and Air Devices

A. Fire Department Connections
B. Basics of Compressed Air
C. Air Maintenance Devices
D. Tanks and Air Sources
E. Use of Nitrogen Tanks
F. Laboratory
   Have trainees practice connecting an air compressor to a dry-pipe system.
   This laboratory corresponds to Performance Task 5.

Session IX. Troubleshooting

A. Determining the Problem
B. Collecting and Analyzing Data
C. Deciding on Action
D. Performing the Action
E. Laboratory
   Have trainees practice resetting and troubleshooting a dry-pipe system.
   This laboratory corresponds to Performance Task 6.
F. Summary

Session X. Review and Testing

A. Module Review
B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Training Report Form 200, and submit
      the results to the Training Program Sponsor.
C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive
      recognition from NCCER. If applicable, proficiency noted during laboratory
      exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Training Report Form 200, and submit
      the results to the Training Program Sponsor.
