

T Level Technical Qualification in **Construction: Design, Surveying and Planning**

Core Knowledge and Understanding

Mark Scheme

**Topic test 2: Construction mathematics and
applied mathematics**

T Level Construction: Design, Surveying and Planning

General Marking Guidance for all Topic Tests

- All learners must receive the same treatment. Marker must mark the first learner in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Learners must be rewarded for what they have shown they can do rather than penalised for omissions.
- You should mark according to the mark scheme not according to your perception of where the grade boundaries may lie.
- All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. You should always award full marks if deserved. You should also be prepared to award zero marks if the learner's response is not rewardable according to the mark scheme.
- Where judgement is required, a mark scheme will provide the principles by which marks will be awarded.
- Crossed out work should be marked **unless** the learner has replaced it with an alternative response.
- Accept incorrect/phonetic spelling (as long as the term is recognisable) unless instructed otherwise.

Points-Based Mark Scheme Guidance

Points-based mark schemes are made up of:

1) Mark scheme rubric

A mark scheme rubric instructs a marker as to how each mark is awarded.

2) Example Responses

These demonstrate the type of acceptable responses that a learner might provide and where each mark is awarded.

3) Additional marking Guidance

This informs markers about any parameters which should be applied e.g. 'accept any other appropriate/alternative responses.'

Applying the points-based mark scheme guidance

Examiners should follow the mark scheme rubric and use the example responses as a guide for the relevance and expectation of the responses. Students must be credited for any appropriate response. Should candidates provide answers that meet the rubric but in an alternative order, credit should be given.

Levels-Based Mark Scheme Guidance

Levels-based mark schemes (LBMS) have been designed to assess students' work holistically. They consist of two parts:

1) Indicative content

Indicative content reflects content-related points that a student might make but is not an exhaustive list. Nor is it a model answer. Students may make some or none of the points included in the indicative content as its purpose is as a guide for the relevance and expectation of the responses. Students must be credited for any appropriate response.

2) Levels-based descriptors

Each level is made up of a number of traits which when combined together articulate the quality of response that a student needs to demonstrate. The traits progress across the levels to demonstrate the different expectations of each level. When using a levels-based mark scheme, the 'best fit' approach should be used.

Applying the levels-based descriptors

Examiners should take a 'best fit' approach to determining the mark.

- Examiners should first make a holistic judgement on which level most closely matches the student's response. Students will be placed in the level that best describes their answer. Answers can display characteristics from more than one level, and where this happens markers must use any additional guidance (e.g. weighting of traits) and their professional judgement to decide which level is most appropriate.
- The mark awarded within the level will be decided based on the quality of the answer and will be modified according to how securely all traits are displayed at that level:
 - Marks will be awarded at the top of that level if the student has evidenced each of the descriptor traits securely.
 - Where the response does not securely meet all traits, the marks should be awarded based on how closely the descriptor has been met.

Topic Test 2: Construction mathematics and applied mathematics – Mark Scheme

Notes to markers:

For maths questions there are two types of mark:

Method marks (**M**) - these are awarded for the correct process being followed.

Accuracy marks (**A**) - these are awarded for the correct answer as shown in the mark scheme

Other conventions in the mark scheme

(ft) - this means 'apply follow through' which means method marks can be awarded if a learner carries their incorrect answer forward and then uses the correct method in their subsequent working.

sf - significant figures. The final accuracy mark should only be awarded for answers given to the stated number of significant figures if required by a question.

dp - decimal places. The final accuracy mark should only be awarded for answers given to the stated number of decimal places if required by a question.

For other questions, do not penalise for truncating or rounding answers.

Question number	Working	Answer	Notes	Mark
1	<p>Stress σ = Force/Area</p> <p>$A = F/\sigma$</p> <p>$A = 300/420$</p> <p>$A = 0.71 \text{ m}^2$</p> <p>Area = $\pi d^2/4$</p> <p>$d = \sqrt{(4A/\pi)}$</p> <p>$d = \sqrt{(4 \times 0.71/\pi)}$</p> <p>$d = 0.95 \text{ m}$</p> <p>Alternative approach for area</p> <p>Area = πr^2</p> <p>$r = \sqrt{(A/\pi)}$</p> <p>$r = (0.71/\pi)$</p> <p>$d = 2r$</p> <p>$d = 2 \times 0.475$</p> <p>$d = 0.95 \text{ m}$</p> <p>Accept any other appropriate method</p>	$d = 0.95 \text{ m}$	<p>M1 for correct manipulation and population of formula for area, stress and force</p> <p>A1 for correct area</p> <p>M1 for correct population of formula for diameter of a circle</p> <p>A1 for correct value for diameter</p> <p>Mark allocation for alternative method:</p> <p>M1 for correct population of formula for radius of a circle</p> <p>A1 for correct value for diameter</p>	

Question number	Working	Answer	Notes	Mark
2a	$\text{Mean} = (484 + 540 + 785 + 1105 + 500)/5$ $\text{Mean} = 3414/5$ $\text{Mean} = 683 \text{ (£millions)} \text{ to } 3 \text{ s.f.}$	£ 683 million	A1 for correct answer	(1)

Question number	Answer				Mark
2b(i)			Estimated Cost - Mean Cost (£ millions)	(Estimated Cost - Mean Cost) ²	
	Region	Estimated Cost (£ millions)			
	North East	484	- 199	39 601	
	North West	540	-143	20 499	
	Midlands	785	102	10 404	
	London and the South East	1105	422	178 084	
	South West	500	-183	33 489	
	total			282 077	
	1 mark for 3 correct values of ‘cost - mean’ 1 mark for 3 correct ‘squared values’ Allow ecf for an incorrect value for the mean from 2a.				
Question number	Working	Answer	Notes	Mark	
2b(ii)	Mean of squared values 282 077/5 = 56415 SD = sqrt of mean of squared values SD = 238 (£millions)	SD = 238 (£millions)	A1 for correct answer for S.D. Note: allow ecf for the incorrect value for the mean from 2a	(1)	

Question number	Working	Answer	Notes	Mark
3	<p>a) Voltage calculation</p> $V = IR$ $V = 0.3 \times 40$ $V = 12V$	12V	<p>M1 for correct manipulation and population of formula for voltage, current and resistance.</p>	(2)
	<p>b) Transformer equation</p> $\frac{V_1}{V_2} = \frac{N_1}{N_2}$ $\frac{230}{12} = \frac{575}{N_2}$ $N_2 = (12 \times 575)/230$ $N_2 = 30 \text{ turns}$	30 turns	<p>A1 for correct voltage</p> <p>M1 for correct population of formula for the transformer (ft)</p> <p>Note: allow follow through for the learner's value of V from part (a)</p> <p>A1 for correct value for the number of turns</p> <p>Note: allow follow through for the learner's value of V from part (a)</p>	(2)

Question number	Working	Answer	Notes	Mark
4	<p>Bricks $60 \times (375/1000) \times 1.05$ $= £23.63$</p> <p>Mortar $0.027 \times 63.20 \times 1.05$ $= £1.79$</p> <p>Labour $(1.25 \times 13.50 + 0.625 \times 11)$ $= 16.875 + 6.875 = £23.75$</p> <p>Total unit rate (m^2) $= £49.17$</p> <p>Accept any other appropriate method</p>	£ 49.17	<p>M1 for cost of bricks M1 for cost of mortar M1 for cost of labour</p> <p>A1 for correct answer for unit rate</p>	(4)

Question number	Working	Answer	Notes	Mark
5a	<p>Amount the length of each row reduces by $= (0.4/\tan 33) + (0.4/\tan 50)$ $= 0.62 + 0.34 = 0.96m$</p> <p>Row 1 = $8m = 4$ boards Row 2 = $(8 - 0.96) = 7.04 = 4$ boards Row 3 = $(7.04 - 0.96) = 6.08 = 3$ Row 4 = $(6.08 - 0.96) = 5.12 = 3$ boards</p> <p>Number of boards required for the shaded area: $4 + 4 + 3 + 3 = 12$ boards</p>	12	<p>M1 for calculation of the change in length per row of boards</p> <p>M1 for recognition that rows 1, 2 and 3 must use whole boards</p> <p>M1 for a complete method to find the number of whole boards</p> <p>A1 Correct number of boards</p>	(4)

Question number	Working	Answer	Notes	Mark
5b	<p>Consider triangle ABD to find distance BD-</p> <p>Cosine rule to calculate side BD:</p> $BD^2 = 83^2 + 67^2 - 2 \times 83 \times 67 \times \cos 120$ $BD^2 = 16939$ $BD = \sqrt{16939} = 130.1 \text{ m (1 d.p.)}$ <p>Pythagoras to find CD</p> $CD = \sqrt{(130.1^2 - 101^2)}$ $CD = 82.1 \text{ m}$ <p>Total length = $67 + 83 + 101 + 82.1$</p> <p>Total length = 333.1 m</p> <p>Number of panels</p> $333.1 / 3.5 = 94.6 \text{ panels}$ <p>95 panels</p> <p>Accept as an alternative approach</p> $67 / 3.5 = 19.1 \text{ (20)}$ $83 / 3.5 = 23.7 \text{ (24)}$ $101 / 3.5 = 28.8 \text{ (29)}$ $82.1 / 3.5 = 23.5 \text{ (24)}$ $20 + 24 + 29 + 24 = 97 \text{ panels}$ <p>97 panels</p>	95 panels	<p>M1 for correct value of length BD</p> <p>A1 for value of BD</p> <p>A1 for length of CD</p> <p>A1 for total number of panels</p>	(4)

Question number	Working	Answer	Notes	Mark
6	<p>Calculate the length of the sloping floor</p> $L = \sqrt{0.7^2 + 6^2}$ $L = 6.04\text{m}$ <p>total length of the walls and floor</p> $2 + 2 + 1.3 + 6.04$ $= 11.34\text{m}$ <p>Area of ends and floor</p> $= 11.34 \times 4 = 45.36\text{m}^2$ <p>Area of each side wall</p> $8 \times 2 - 0.5 \times (6 \times 0.7)$ $= 13.9 \text{ m}^2$ <p>Total area</p> $45.36 + 13.9 + 13.9$ $= 73.16\text{m}^2$ $= 73.2\text{m}^2$	73.2m ²	<p>M1 for calculating the length of the sloping floor</p> <p>A1 for length of sloping floor</p> <p>A1 for total length of the floor and wall</p> <p>A1 for area of walls and floor</p> <p>A1 for the area of each side wall</p> <p>A1 for correct value for total area</p>	(6)

Question number	Working	Answer	Notes	Mark
7	<p>Simpson's Rule</p> $\text{Area} = \frac{w}{3} \times [(y_1 + y_n) + 4(y_2 + y_4 + y_6 + \dots) + 2(y_3 + y_5 + \dots)]$ $\text{Area} = \frac{3}{3} \times [(2 + 2.3) + 4(1.9 + 2.4 + 2.1) + 2(2.2 + 2.3)]$ $\text{Area} = 1 \times (4.3 + 4 \times 6.4 + 2 \times 4.5)$ $\text{Area} = 4.3 + 25.6 + 9$ $\text{Area} = 38.9\text{m}^2$ $\text{Volume} = \text{Area} \times 2.5$ $\text{Volume} = 38.9 \times 2.5$ $\text{Volume} = 97.25 \text{ m}^3$ $\text{Volume} = 97.3 \text{ m}^3 \text{ (to 3sf)}$	Accept answers rounding to 97.3m ³ (to 3 sf)	<p>M1 for correct substitution of value of 'w'(3) into the formula</p> <p>M1 for correct substitution of values for y</p> <p>M1 for simplification of terms</p> <p>A1 for correct answer for area</p> <p>M1 for correct process for calculating volume (ft)</p> <p>A1 for correct answer for volume to 3sf</p> <p>Note: A1 can only be awarded for an answer to 3sf.</p>	(6)

Question number	Method	Answer	Notes	Mark
8	<p>Contractor A would remove $1495/12 = 124.58 \text{ m}^3$ per hour</p> <p>(Work rate plant A \times T) + (work rate plant B \times T) = 1, where T is the time for job completion.</p> <p>Work by plant A = work rate \times time, $1 = \text{work rate} \times 12$, Work rate plant A = $1 \div 12$</p> <p>Work by plant b = work rate \times time, $1 = \text{work rate} \times 7$, work rate plant B = $1 \div 7$</p> <p>$(1/7 \times T) + (1/12 \times T) = 1$ $T/7 + T/12 = 1$ $19T/84 = 1$ Time = $84 \div 19$, T = 4.42 hours</p> <p>Volume removed by contractor A: $4.42 \times 124.58 \text{ m}^3$ Volume = 550.6 m^3</p> <p>Volume = 551 m^3</p>	551 m^3	<p>M1 for process of calculating how much material contractor A can remove per hour</p> <p>M1 for process of calculating work rate of plant A and plant B</p> <p>M1 for identifying relationship between work rates and total time</p> <p>M1 for correct rearranging of formula</p> <p>A1 for correct answer in hours</p> <p>A1 for correct answer (to 3sf) for the volume of material removed by contractor A</p>	(6)

Question number	Working	Answer	Notes	Mark
9	$\int_{38}^{40} 3x^2 + 8x + 2$ $y = \left[x^3 + 4x^2 + 2x \right]_{38}^{40}$ $y = [40^3 + 4 \times 40^2 + 2 \times 40] - [38^3 + 4 \times 38^2 + 2 \times 38]$ $y = [64000 + 6400 + 80] - [54872 + 5776 + 76]$ $y = 70480 - 60724$ $y = 9756 \text{ mJ}$	y = 9756	<p>M1 for setting up definite integral A1 for correct integration of definite integral</p> <p>M1 for substituting values for lower limit M1 for substituting values for upper limit M1 for process of calculating definite integral</p> <p>A1 for correct value for y</p>	(6)

Question number	Working	Answer	Notes	Mark
10	$V = 200 = \pi r^2 h$ therefore $h = (200/\pi r^2)$ $A = 2\pi r^2 + 2\pi r h$ $A = 2\pi r^2 + 2\pi r \times 200/\pi r^2$ $A = 2\pi r^2 + 400/r$ $\frac{dA}{dr} = 4\pi r - \frac{400}{r^2}$ For the minimum radius, $dA/dr=0$ $4\pi r - \frac{400}{r^2} = 0$ $4\pi r = \frac{400}{r^2}$ $4\pi r^3 = 400$ $r^3 = 400/4\pi$ $r = \sqrt[3]{\frac{400}{4\pi}}$ $r = 5.6 \text{ m}$	$r = 5.6 \text{ m}$	M1 rearranging formula for volume in terms of h M1 process to derive an expression for A in terms of r A1 for correct differentiation M1 for recognition that for a minimum value $dA/dr = 0$ Note: this might be implied in the working M1 for rearranging in terms of r A1 Correct answer for r	(6)

Question number	Working	Answer	Notes	Mark
11	<p>Volume of concrete required:</p> <p>CSA = 900mm x 450mm</p> <p>CSA = $0.9 \times 0.45 = 0.405\text{m}^2$</p> <p>Volume = CSA x length</p> <p>Volume = 0.405×16.5</p> <p>Volume = 6.6825 m^3</p> <p>Amount of cement required</p> <p>$500 \times (6.6825 / 1.56) = 2141.8 \text{ kg}$</p> <p>Ratio of cement to coarse aggregates is 1:4</p> <p>Therefore</p> <p>Coarse aggregates = 2141.8×4</p> <p>Amount of coarse aggregates = 8567.3 kg</p>	<p>8567.3 kg</p> <p>Accept answers rounding to 8567 kg</p>	<p>A1 for correct CSA of the trench</p> <p>A1 for correct volume of concrete required</p> <p>M1 for method of calculating the amount of cement required</p> <p>A1 for correct amount of cement</p> <p>M1 for applying ratio for cement:coarse aggregates</p> <p>A1 for correct answer correct amount of coarse aggregates</p>	(6)
