

FAQs

Question	Answer
I'm an experienced teacher but I am not an electric auto specialist, can I teach the new units?	Yes, we have worked with Comau to develop teacher resources to support you in delivering these units.
What does the digital content look like on screen, could I see a demo?	As part of the webinar, we gave you a mini demo of the content available on Learning Hub. If you would like a full demo please request one by completing this form
If I am a registered centre for BTEC, how easy will it be to apply to offer this course, will I need a separate SV visit?	You can add this as an additional qualification on your centre registration. Where appropriate we will try to consolidate SV visits across qualifications offered in the same sector.
What courses could learners progress to after completion of this course?	Learners can progress into employment depending on the role, or into further education including a Higher National, degree course or higher level technical qualifications.
Can you give more information around safety in the fourth generation?	A Generation 4 Battery (or solid-state battery) has higher energy density than a Li-ion battery that uses liquid electrolyte solution. It doesn't have a risk of explosion or fire, so there is no need to have components for safety, thus saving more space and weight.
