Tanapa Srito

King Mongkut's Institution of Technology Ladkrabang (KMITL)

Country

Thailand

Studying

Manufacturing Engineering

How did you hear/come to know about BTEC qualification?

KMITL sent out emails to students regarding BTEC courses.

What have you enjoyed most about your BTEC?

What I enjoy most is the fair and rewarding criteria that is used to grade us students, compared to the scoring system currently used in Thailand. This helps to set clear goals of what needs to be achieved and having sight of that from the start makes studying less stressful.

Which key skills have you developed while studying a BTEC that will prepare you for the future?

Project designing and management. Being able to plan out a long-term project where there are clear goals and budget helps in giving a clear idea of what it is like to work with real life restrictions.

Include any examples and details of extra-curricular/in industry activities that have helped you developed your skills and knowledge.

- Arranging time our professors to visit them outside of class to consult about projects.
- Read up on extra information about what we're studying from reliable sources.
- Research study projects similar to what we're doing now that was done before, to give guidance.

How do you demonstrate your leadership capabilities and becoming role models to your fellow learners?

The ways i showcase my leadership skills in class is that work with students within my class to make sure we have any questions compiled together to make sure we use our professors time properly, i also arrange meeting times and support others within the class to ensure we are all on the same page.

What makes students who take a BTEC stand out from those who take other qualifications?

BTEC teaches students project management skills, which helps the student learn the practical skills that need to be applied and not just the knowledge.

This sort of learning stays with you and supports you through your career and future education.

What are your future plans after completing a BTEC, employment or further education?

Further education, i plan on going to Denmark technical university to study Bioinformatics.

If you were to recommend a BTEC, what are the top three reasons you would give?

1. Smaller size classrooms makes teaching more immersive.
2. Studying a BTEC is less stressful due to the grading system. Being able to use the learning goals instead of numbers helps students understand what's going on and making it fair and regarding.
3. Opens doors into further education and professions. With a BTEC you can continue to pursue your dream career without any restrictions
