

Edexcel BTEC Level 2 Certificate in Construction Plant Operations (QCF)

Specification

BTEC specialist qualification

First teaching January 2012

Edexcel, a Pearson company, is the UK's largest awarding body offering academic and vocational qualifications and testing to schools, colleges, employers and other places of learning in the UK and internationally. Qualifications include GCSE, AS and A Level, NVQ and our BTEC suite of vocational qualifications from entry level to BTEC Higher National Diplomas. Edexcel and BTEC qualifications are administered by Pearson Education Ltd.

Through initiatives such as onscreen marking and administration, Edexcel is leading the way in using technology to modernise educational assessment and support teachers and learners.

References to third party material made in this specification are made in good faith. Edexcel does not endorse, approve or accept responsibility for the content of materials, which may be subject to change, or any opinions expressed therein. (Material may include textbooks, journals, magazines and other publications and websites.)

Purpose of this specification

This specification sets out:

- the qualification's objective
- any other qualification which a learner must have completed before taking the qualification
- any prior knowledge, skills or understanding which the learner is required to have before taking the qualification
- units which a learner must have completed before the qualification will be awarded and any optional routes
- any other requirements which a learner must have satisfied before the learner will be assessed or before the qualification will be awarded
- the knowledge, skills and understanding which will be assessed as part of the qualification (giving a clear indication of their coverage and depth)
- the method of any assessment and any associated requirements relating to it
- the criteria against which the learner's level of attainment will be measured (such as assessment criteria)
- any specimen materials
- any specified levels of attainment.

1 Introducing BTEC Specialist qualifications

What are BTEC Specialist qualifications?

BTEC Specialist qualifications are qualifications from Entry to level 3 on the Qualifications and Credit Framework (QCF). They are work-related qualifications and are available in a range of sectors. They give learners the knowledge, understanding and skills they need to prepare for employment. They also provide career development opportunities for those already in work. These qualifications may be full time or part time courses in schools or colleges. Training centres and employers may also offer these qualifications.

Some BTEC Specialist qualifications are knowledge components in Apprenticeship Frameworks (previously known as 'Technical Certificates').

There are three sizes of BTEC Specialist qualification in the QCF:

- Award (1 to 12 credits)
- Certificate (13 to 36 credits)
- Diploma (37 credits and above).

Every unit and qualification in the QCF has a credit value.

The credit value of a unit is based on:

- one credit for every 10 hours of learning time
- learning time – defined as the time taken by learners at the level of the unit, on average, to complete the learning outcomes to the standard determined by the assessment criteria.

2 Qualification summary and key information

Qualification title	Edexcel BTEC Level 2 Certificate in Construction Plant Operations (QCF)
QCF Qualification Number (QN)	600/4084/1
Qualification framework	Qualifications and Credit Framework (QCF)
Date registrations can be made	01/01/2012
Age range that the qualification is approved for	16–18 18+ 19+
Credit value	30
Assessment	Centre-devised assessment (internal assessment)
Guided learning hours	180
Grading information	The qualification and units are at pass grade.
Entry requirements	No prior knowledge, understanding, skills or qualifications are required before learners register for this qualification. However, centres must follow the Edexcel <i>Access and Recruitment</i> policy (see <i>Section 9, Access and Recruitment</i>).

QCF qualification title and Qualification Number

Centres will need to use the QCF Qualification Number (QN) when they seek public funding for their learners. As well as a QN, each unit within a qualification has a QCF unit reference number (URN).

The qualification title, QN and URNs are on learners' final certification documentation. Learners need to know this information when they are recruited by the centre and registered with Edexcel. Further information about certification is in the *Edexcel Information Manual* on our website, www.edexcel.com/iwantto/Pages/info-manual.aspx.

Objective of the qualification

The Edexcel BTEC Level 2 Certificate in Construction Plant Operations (QCF) is for learners who work in, or want to work in, the construction industry.

It gives them the opportunity to:

- engage in learning that is relevant to them and which will give them opportunities to develop a range of skills and techniques, personal skills and attributes essential for successful performance in working life
- achieve a nationally recognised level 2 vocationally-related qualification
- progress to employment in a particular vocational sector
- progress to related vocational qualifications.

Apprenticeships

ConstructionSkills approve the Edexcel BTEC Level 2 Certificate in Construction Plant Operations (QCF) as a knowledge component for the Intermediate Apprenticeship in Construction.

Progression opportunities through Edexcel qualifications

Learners who have achieved the Certificate can progress to a range of qualifications, including the Edexcel BTEC Level 3 Award, Extended Certificate and Diploma in Construction and the Built Environment, or to employment in the construction sector. See *Annexe A* for further information.

Industry support and recognition

This qualification is supported by ConstructionSkills, the SSC for the construction sector.

Relationship with National Occupational Standards

This qualification relates to the National Occupational Standards (NOS) for Plant Operations (Construction). The knowledge covered in all units of the Edexcel BTEC Level 2 Certificate in Construction Plant Operations (QCF) can be partially mapped against the underpinning knowledge of the National Occupational Standards for Plant Operations (Construction).

3 Centre resource requirements

As part of the approval process, centres must make sure that the resource requirements below are in place before offering the qualification.

General resource requirements

- Centres must have appropriate physical resources (for example equipment, IT, learning materials, teaching rooms) to support the delivery and assessment of the qualification.
- Staff involved in the assessment process must have relevant expertise and occupational experience.
- There must be systems in place to make sure that there is continuing professional development for staff delivering the qualification.
- Centres must have appropriate health and safety policies in place relating to the use of equipment by learners.
- Centres must deliver the qualifications in accordance with current equality legislation.

Specific resource requirements

As well as the general requirements above, centres must provide access to appropriate plant and work situations as specified within the individual units in the qualification.

4 Qualification structure

Edexcel BTEC Level 2 Certificate in Construction Plant Operations (QCF)

The learner will need to meet the requirements outlined in the table below before Edexcel can award the qualification.

Minimum number of credits that must be achieved	30
Number of mandatory credits that must be achieved	15
Number of optional credits that must be achieved	15

Unit	URN	Mandatory units	Level	Credit	GLH
1	L/503/6454	Site Safety and Roles and Responsibilities for Plant Operators	2	10	60
2	L/600/0063	Sustainability in the Construction Industry	2	5	30
Unit	URN	Optional units	Level	Credit	GLH
3	M/503/6415	Operating a Forward Tipping Dumper	2	5	30
4	F/503/6449	Operating an Excavator 180° – Below 5 Tonnes	2	5	30
5	A/503/6448	Operating an Excavator 180° – Above 5 Tonnes	2	5	30
6	L/503/6423	Operating a Ride-on Roller	2	5	30
7	A/503/6451	Operating an Excavator 360° – Below 10 Tonnes	2	5	30
8	T/503/6450	Operating an Excavator 360° – Above 10 Tonnes	2	5	30
9	D/503/6426	Operating a Skid Steer Loader	2	5	30
10	Y/503/6425	Operating a Skip Handler	2	5	30
11	T/503/6416	Operating a Dump Truck – Rigid Chassis	2	5	30
12	T/503/6433	Operating a Dump Truck – Articulated Chassis	2	5	30
13	L/503/6440	Operating a Rough Terrain Forklift	2	5	30
14	D/503/6443	Operating a Telescopic Handler	2	5	30
15	J/503/6419	Operating a Hoist	2	5	30

Unit	URN	Optional units	Level	Credit	GLH
16	F/503/6421	Operating a Mobile Elevating Work Platform – Scissor	2	5	30
17	J/503/6436	Operating a Mobile Elevating Work Platform – Boom	2	5	30
18	D/503/6412	Operating a Concrete Pump – Trailer Mounted	2	5	30
19	A/503/6434	Operating a Grader	2	5	30
20	K/503/6428	Operating a Wheeled Loading Shovel	2	5	30
21	K/503/6431	Operating a Crawler-Tractor/Dozer	2	5	30
22	Y/503/6411	Operating a Concrete Pump – Truck-mounted Boom	2	5	30
23	H/503/6458	Operating a Tracked Loading Shovel	2	5	30
24	A/503/6420	Operating a Motorised Scraper	2	5	30
25	H/503/6430	Operating a Crawler-Tractor – Side Boom	2	5	30
26	M/503/6446	Operating a Trencher	2	5	30
27	K/503/6414	Operating a Crawler Crane	2	5	30
28	H/503/6427	Operating a Tower Crane	2	10	60
29	F/503/6418	Operating a Lorry Loader	2	5	30
30	J/503/6453	Performing Slinger/Signaller Duties	2	5	30
31	F/503/6435	Operating a Mobile Crane	2	5	30
32	L/503/6437	Operating a Pedestrian Operated Tower Crane	2	5	30
33	M/503/6429	Operating a Compact Crane	2	5	30
34	H/503/6413	Operating a Crusher	2	5	30
35	R/503/6441	Operating a Screener	2	5	30
36	M/503/6432	Operating a Dragline	2	5	30
37	R/503/6455	Operating a Piling Rig – Tripod	2	5	30
38	Y/503/6439	Operating a Piling Rig – Driven Below 15 Tonnes	2	5	30
39	J/503/6422	Operating a Piling Rig – Driven Above 15 Tonnes	2	5	30
40	Y/503/6456	Operating a Piling Rig – Bored Below 15 Tonnes	2	5	30

Unit	URN	Optional units	Level	Credit	GLH
41	R/503/6438	Operating a Piling Rig – Bored Above 15 Tonnes	2	5	30
42	T/503/6447	Operating an Agricultural Tractor	2	5	30
43	F/503/6452	Operating an Industrial Forklift Truck	2	5	30
44	R/503/6424	Operating a Reach Truck	2	5	30
45	K/503/6445	Operating a Transporter Loader/Securer STGO	2	5	30
46	H/503/6444	Operating a Transporter Loader/Securer non-STGO	2	5	30
47	A/503/6417	Operating a Loader Compactor	2	5	30
48	Y/503/6442	Operating a Soil/Landfill Compactor	2	5	30

5 Assessment

Centre-devised assessment is used for all units in this qualification.

Centre-devised assessment (internal assessment)

Each unit has specified learning outcomes and assessment criteria. To pass an internally assessed unit, learners must meet all the assessment criteria. Centres may find it helpful if learners index and reference their evidence to the relevant learning outcomes and assessment criteria.

Centres need to write assignment briefs for learners to show what evidence is required. Assignment briefs should indicate clearly which assessment criteria are being targeted.

Assignment briefs and evidence produced by learners must meet any additional requirements in the *Information for tutors* section of the unit.

Unless otherwise indicated within *Information for tutors*, the centre can decide what form assessment evidence will take (eg performance observation, presentations, projects, tests, extended writing) as long as the methods chosen allow learners to produce valid, sufficient and reliable evidence of meeting the assessment criteria.

Centres are encouraged to give learners realistic scenarios and maximise the use of practical activities in delivery and assessment.

To avoid over assessment, opportunities to link the delivery and assessment of units with other units should be taken.

Further guidance about internal assessment is given on our website. See *Section 12* for details.

6 Recognising prior learning and achievement

Recognition of Prior Learning

Recognition of Prior Learning (RPL) is a method of assessment (leading to the award of credit) that considers whether a learner can demonstrate that they can meet the assessment requirements for a unit through knowledge, understanding or skills they already possess and so do not need to develop through a course of learning.

Edexcel encourages centres to recognise learners' previous achievements and experiences in and outside the workplace, as well as in the classroom. RPL provides a route for the recognition of the achievements resulting from continuous learning.

RPL enables recognition of achievement from a range of activities using any valid assessment methodology. If the assessment requirements of a given unit or qualification have been met, the use of RPL is acceptable for accrediting a unit, units or a whole qualification. Evidence of learning must be sufficient, reliable and valid.

Further guidance is available in the policy document *Recognition of Prior Learning Policy*, which is available on our website.

Credit transfer

Credit transfer describes the process of using a credit or credits awarded in the context of a different qualification or awarded by a different awarding organisation towards the achievement requirements of another qualification. All awarding organisations recognise the credits awarded by all other awarding organisations that operate within the QCF.

If learners achieve units with other awarding organisations, they do not need to retake any assessment for the same units. The centre must keep evidence of unit achievement.

7 Quality assurance of centres

Quality assurance is at the heart of vocational qualifications. The centre assesses BTEC qualifications. The centre will use quality assurance to make sure that their managers, internal verifiers and assessors are standardised and supported. Edexcel uses quality assurance to check that all centres are working to national standards. It gives us the opportunity to identify and provide support, if needed, to safeguard certification. It also allows us to recognise and support good practice.

For the qualifications in this specification, the Edexcel quality assurance model will follow one of the processes below.

- 1 Delivery of the qualification as part of a BTEC apprenticeship (single-click registration):
 - an annual visit by a Standards Verifier to review centre-wide quality assurance systems and sampling of internal verification and assessor decisions.
- 2 Delivery of the qualification outside the apprenticeship:
 - an annual visit to the centre by a Centre Quality Reviewer to review centre-wide quality assurance systems
 - Lead Internal Verifier accreditation. This involves online training and standardisation of Lead Internal Verifiers using our OSCA platform, accessed via Edexcel Online. Please note that not all qualifications will include Lead Internal Verifier accreditation. Where this is the case, we will allocate annually a Standards Verifier to conduct postal sampling of internal verification and assessor decisions for the Principal Subject Area.

For further details, please go to the *UK BTEC Quality Assurance Handbook* on our website: www.edexcel.com.

8 Programme delivery

Centres are free to offer the qualifications using any mode of delivery (for example full time, part time, evening only, distance learning) that meets their learners' needs. Whichever mode of delivery is used, centres must make sure that learners have access to the resources identified in the specification and to the subject specialists delivering the units.

Those planning the programme should aim to enhance the vocational nature of the qualification by:

- liaising with employers to make sure a course is relevant to learners' specific needs
- accessing and using non-confidential data and documents from learners' workplaces
- developing up-to-date and relevant teaching materials that make use of scenarios that are relevant to the sector
- giving learners the opportunity to apply their learning in practical activities
- including sponsoring employers in the delivery of the programme and, where appropriate, in the assessment
- making full use of the variety of experience of work and life that learners bring to the programme.

Where legislation is included in unit content, centres must ensure that only current legislation is taught.

9 Access and recruitment

Edexcel's policy regarding access to our qualifications is that:

- they should be available to everyone who is capable of reaching the required standards
- they should be free from any barriers that restrict access and progression
- there should be equal opportunities for all those wishing to access the qualifications.

Centres are required to recruit learners to BTEC Specialist qualifications with integrity.

Applicants will need relevant information and advice about the qualification to make sure it meets their needs.

Centres should review the applicant's prior qualifications and/or experience, considering whether this profile shows that they have the potential to achieve the qualification.

For learners with disabilities and specific needs, this review will need to take account of the support available to the learner during teaching and assessment of the qualification. The review must take account of the information and guidance in *Section 10, Access to qualifications for learners with disabilities or specific needs*.

10 Access to qualifications for learners with disabilities or specific needs

Equality and fairness are central to our work. Edexcel's Equality Policy requires all learners to have equal opportunity to access our qualifications and assessments and that our qualifications are awarded in a way that is fair to every learner.

We are committed to making sure that:

- learners with a protected characteristic (as defined by the Equality Act 2010) are not, when they are undertaking one of our qualifications, disadvantaged in comparison to learners who do not share that characteristic
- all learners achieve the recognition they deserve from undertaking a qualification and that this achievement can be compared fairly to the achievement of their peers.

Learners taking a qualification may be assessed in British sign language or Irish sign language where it is permitted for the purpose of reasonable adjustments.

Details on how to make adjustments for learners with protected characteristics are in the policy document *Reasonable Adjustment and Special Considerations for BTEC and Edexcel NVQ Qualifications*, which is on our website at: www.edexcel.com/Policies/.

11 Units

Units have the following sections.

Unit title

The unit title is on the QCF and this form of words will appear on the learner's Notification of Performance (NOP).

Unit reference number

Each unit is assigned a unit reference number that appears with the unit title on the Register of Regulated Qualifications.

QCF level

All units and qualifications within the QCF have a level assigned to them. There are 9 levels of achievement, from Entry to level 8. The QCF Level Descriptors inform the allocation of the level.

Credit value

When a learner achieves a unit, they gain the specified number of credits.

Guided learning hours

Guided learning hours are the times when a tutor, trainer or facilitator is present to give specific guidance towards the learning aim for a programme. This definition covers lectures, tutorials and supervised study in for example open learning centres and learning workshops. It also includes assessment by staff where learners are present. It does not include time spent by staff marking assignments or homework where the learner is not present.

Unit aim

This gives a summary of what the unit aims to do.

Learning outcomes

The learning outcomes of a unit set out what a learner knows, understands or is able to do as the result of a process of learning.

Assessment criteria

The assessment criteria specify the standard required by the learner to achieve the learning outcome.

Unit amplification

This section gives further clarification on what a learner needs to know to achieve a learning outcome. Information in brackets gives exemplification for specific areas of knowledge.

Unit 1: Site Safety and Roles and Responsibilities for Plant Operators

Unit reference number: L/503/6454

QCF level: 2

Credit value: 10

Guided learning hours: 60

Unit aim

This unit is specifically for plant operators, to help them develop knowledge and understanding of site safety issues and their roles and responsibilities. It also provides an opportunity to develop progressive career pathways.

The unit gives learners an understanding of individual job roles and responsibilities and helps them to examine and plan the typical career development of a plant operator by exploring various career paths and training opportunities.

Significant health and safety improvements are constantly being made in the construction industry. Construction operations are inherently dangerous and so it is essential that learners entering or already working in the construction industry understand health and safety issues and can carry out their work safely. Hazards in construction can come from plant, equipment and substances used, from the actual tasks carried out and from the way people perform these tasks. Appropriate training ensures that operators are competent to use plant and equipment safely.

This unit focuses on health and safety for plant operators. Learners will understand the importance of ensuring good standards of health and safety and will become familiar with important relevant legislation. They will learn how to identify hazards, minimise risks and how to deal with emergencies and accidents should these happen. The emphasis is on legislation and organisational procedures.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification	
1	Know the roles and responsibilities of plant operators in the construction sector	1.1	Describe the importance of own role as a plant operator	<input type="checkbox"/>	Own job description
		1.2	Describe how own role links to the wider construction sector	<input type="checkbox"/>	Organisation's aim
				<input type="checkbox"/>	Role of the sector
				<input type="checkbox"/>	Aims and objectives of the construction sector
		1.3	Describe the main roles and responsibilities of representative bodies that influence the construction sector	<input type="checkbox"/>	Trade unions
			Professional bodies		
			Health and Safety Executive (HSE)		
		1.4	State employee rights and responsibilities under employment law	<input type="checkbox"/>	Difference between rights and responsibilities
				<input type="checkbox"/>	Current employment legislation
		1.5	Describe how related legislation can support employees in the workplace	<input type="checkbox"/>	Current anti-discrimination legislation, eg gender, race, religion, disability, age
				<input type="checkbox"/>	Working hours and holiday entitlement
				<input type="checkbox"/>	Data protection
				<input type="checkbox"/>	Other relevant examples

Learning outcomes		Assessment criteria	Unit amplification
	1.6	Describe employer responsibilities in the workplace	<ul style="list-style-type: none"> <input type="checkbox"/> Duty of care to employees, eg safe and healthy workplace, public liability insurance <input type="checkbox"/> Appropriate training and development <input type="checkbox"/> Adherence to terms of contract
	1.7	Identify sources and types of information and advice on own employment rights and responsibilities	<ul style="list-style-type: none"> <input type="checkbox"/> Human resources (HR) department <input type="checkbox"/> Line manager <input type="checkbox"/> Trade union representative <input type="checkbox"/> Professional body <input type="checkbox"/> Internet <input type="checkbox"/> Trade magazines and journals
2	2.1	Describe occupational opportunities within the construction sector	<ul style="list-style-type: none"> <input type="checkbox"/> Progression routes within construction <input type="checkbox"/> Importance of continued professional development (CPD); training opportunities on and off the job; online and distance learning; skills updating/renewal <input type="checkbox"/> License to practice such as Construction Plant Competence Scheme (CPCS) etc
	2.2	Identify sources of information related to a chosen career pathway	<ul style="list-style-type: none"> <input type="checkbox"/> Line manager <input type="checkbox"/> Sector Skills Council <input type="checkbox"/> Professional organisations, eg CIOB, RICS, RIBA, ICE, CIBSE <input type="checkbox"/> JobCentre Plus <input type="checkbox"/> Relevant websites

Learning outcomes		Assessment criteria		Unit amplification
3	Know the importance of health and safety for plant operators on construction sites	2.3	Identify next steps in own career pathway	<ul style="list-style-type: none"> <input type="checkbox"/> Create a development plan <input type="checkbox"/> Consult related websites
		3.1	State the legislation that covers health and safety on construction sites	<ul style="list-style-type: none"> <input type="checkbox"/> For example, Health and Safety at Work Act 1974 and other current and relevant legislation applicable to the working environment such as Provision and Use of Work Equipment Regulations (PUWER) and Lifting Operations and Lifting Equipment (LOLER) Regulations, Control of Substances Hazardous to Health (COSHH)
		3.2	Identify the health and safety responsibilities of individuals on construction sites	<ul style="list-style-type: none"> <input type="checkbox"/> Inspection and testing <input type="checkbox"/> Requirement for operator competence <input type="checkbox"/> Safe systems of work <input type="checkbox"/> Awareness of the requirements of other legislation, eg management of health and safety at work regulations, workplace health and safety and welfare regulations, personal and protective equipment at work regulations, manual handling operations regulations <input type="checkbox"/> Sources of information and guidance within an organisation <input type="checkbox"/> Using equipment safely, eg mechanical, electrical, fluid power equipment <input type="checkbox"/> Lifting and carrying techniques <input type="checkbox"/> Housekeeping, eg tidy workspace, protecting others from harm for example as a result of work being carried out by self or others

Learning outcomes		Assessment criteria		Unit amplification
4	Know potential risks and hazards on construction sites	4.1	Identify potential risks and hazards on construction sites	<ul style="list-style-type: none"> <input type="checkbox"/> Working environment, eg working at height, electricity, confined spaces, hot work <input type="checkbox"/> Tools and equipment <input type="checkbox"/> Materials and substances <input type="checkbox"/> Dangers of not working to laid down procedures
		4.2	Describe how potential risks and hazards can be reduced on construction sites	<ul style="list-style-type: none"> <input type="checkbox"/> For example, Health and Safety Executive (HSE) '5 steps to risk assessment' including identifying hazards, deciding who might be at risk of harm and how they might be harmed, evaluation of the risks and control measures, recording of findings and implementation, review of risk assessment and update when necessary
		4.3	Describe hazard warning signs and symbols used on construction sites	<ul style="list-style-type: none"> <input type="checkbox"/> Identification and appropriate positioning of safety signs <input type="checkbox"/> Difference between mandatory, warning, prohibition and safety advisory signs
5	Know the emergency and accident procedures on construction sites	5.1	Describe evacuation procedures for a construction site	<ul style="list-style-type: none"> <input type="checkbox"/> Construction site incidents (accident/injury, work hazards, fire) <input type="checkbox"/> Identification of appropriate qualified persons, eg first aider, fire warden <input type="checkbox"/> Actions in the event of an accident or emergency, eg types and sounding/initiating emergency alarm, evacuation procedure and escape routes <input type="checkbox"/> Reporting routines, eg at assembly point, hazards and malfunctions, injury, near miss occurrences

Learning outcomes	Assessment criteria	Unit amplification
	5.2 Describe procedures for reporting accidents and incidents	<input type="checkbox"/> Theory of fire triangle <input type="checkbox"/> Classes of fires <input type="checkbox"/> Types of fire extinguishers <input type="checkbox"/> Selection of appropriate extinguishers for given situations

Unit 2: Sustainability in the Construction Industry

Unit reference number: L/600/0063

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit develops learners' understanding of sustainability, explores how sustainability is integrated into construction projects and investigates how sustainability issues can be addressed more effectively in the future.

Global climate change and consequent potential changes mean that sustainability is important to the modern construction and built environment. It is becoming increasingly difficult to resource the materials needed for construction and, therefore, we must reduce the waste and pollution generated by the construction industry. The expectation is that any developments in the industry will now take place with minimal harm to the natural environment. The construction and built environment sector must learn to create a balance between the need for development of the built environment and the need to protect the natural environment. This can be achieved only by having underpinning knowledge and skills in planning, design, production and maintenance stages of the construction process.

This unit provides learners with an opportunity to explore the concept of sustainable construction and how this relates to the current and future impact of the built environment upon the natural environment. Learners will explore issues such as minimisation of waste, pollution control, careful use of resources, preservation of wildlife, flora and fauna and protection of biodiversity.

The unit encourages learners to investigate how sustainable design and construction techniques can be used to address environmental issues. This will include the specification of products, materials and services that do minimal harm to the environment in terms of their manufacture, transport and incorporation into the built environment, and the use of environmentally friendly designs, locally sourced materials, improved management techniques and alternative energy technology. On completion of this unit, learners should be able to use the knowledge and understanding gained to support a sustainable approach to construction in the built environment.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification
1	Understand the concept of sustainability as it applies to the construction and built environment sector	1.1	Explain what is meant by sustainability	<ul style="list-style-type: none"> <input type="checkbox"/> The meaning of sustainability in social, physical, economic and general terms
		1.2	Evaluate the relevance of sustainability to the construction and built environment sector	<ul style="list-style-type: none"> <input type="checkbox"/> Finite resources; global warming; melting icecaps; rising sea levels; climate change; flooding; shortages; extinction of species <input type="checkbox"/> Potential consequences of a reduction in biodiversity <input type="checkbox"/> Needs of future generations <input type="checkbox"/> Local and global context <input type="checkbox"/> Inter-relationships, eg impact on construction design and planning
2	Know the issues affecting the development of a sustainable built environment	2.1	Identify the issues associated with the provision of a sustainable built environment	<ul style="list-style-type: none"> <input type="checkbox"/> Nature of the built environment (significant features, existing and future) <input type="checkbox"/> Impact of the built environment on the natural environment eg local, national, existing, future <input type="checkbox"/> Duty of the construction industry to present and future generations, eg safeguard, maintain, improve and expand the built environment without harming the natural environment

Learning outcomes		Assessment criteria		Unit amplification
		2.2	Describe the issues associated with the provision of a sustainable built environment	<ul style="list-style-type: none"> <input type="checkbox"/> Meeting local and national needs <input type="checkbox"/> Improved business and employment opportunities <input type="checkbox"/> Skills development <input type="checkbox"/> Positive economic impact, eg contribution to gross domestic product (GDP), financial return on development, increased prosperity <input type="checkbox"/> Negative social impact, eg over development, pollution
3	Know how sustainability can benefit the built environment both locally and nationally	3.1	Identify the benefits of using sustainable construction, in both local and national terms	<ul style="list-style-type: none"> <input type="checkbox"/> Employment; social benefits; green spaces; aesthetics; community consultation; local involvement; improved environments; regeneration
		3.2	Describe the benefits of using sustainable construction, in both local and national terms	<ul style="list-style-type: none"> <input type="checkbox"/> Cleaner air; reduction in flooding; education; conservation of resources; economic wellbeing; environmental protection; better quality standards; change in education; government benefits; tourism
4	Know how sustainable design and construction techniques are used to address environmental issues	4.1	Identify the sustainable design and construction techniques used to minimise environmental impact	<ul style="list-style-type: none"> <input type="checkbox"/> Stages of the development process (planning, design, construction) <input type="checkbox"/> Factors influencing these stages (physical, technical, financial, legal and aesthetic) <input type="checkbox"/> Impact on the natural environment at each stage

Learning outcomes	Assessment criteria	Unit amplification
	<p>4.2 Describe the sustainable design and construction techniques used to minimise environmental impact</p>	<ul style="list-style-type: none"> <li data-bbox="279 288 454 1167">□ Respecting the natural environment: overall aims and objectives; minimisation of waste; reduction of pollution; control of rate of consumption of valuable resources; conservation of natural assets; preservation of wildlife, flora and fauna; protection of biodiversity <li data-bbox="470 288 643 1167">□ Techniques, eg environmentally friendly design, specification of locally sourced materials, improved site management, improved resource management, improved waste management, reclamation and recycling, alternative energy technology

Unit 3: Operating a Forward Tipping Dumper

Unit reference number: M/503/6415

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating forward tipping dumpers to transport and discharge materials in the workplace within the relevant sector of industry.

Dump trucks are used to move loose earth and other material within or outside a construction site. There are a number of types of these trucks to suit different needs of the site work. Forward tipping dump trucks are used for off-road transportation, usually within a construction site. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a forward tipping dump truck. This includes identifying components, understanding procedures to load, transport and discharge and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will develop an understanding of loading requirements. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in receiving, transporting and discharging the load into an excavation. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a forward tipping dumper	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel (site and highway) <input type="checkbox"/> Procedures for travelling over rough, undulating ground, steep inclines and level surfaces – loaded and unloaded <input type="checkbox"/> Actions required for manoeuvring in restricted spaces whilst carrying loads
		1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Procedures ensuring the suitability of the tipping and loading area <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
		1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for positioning and receiving loads <input type="checkbox"/> Compliance with loading procedures <input type="checkbox"/> Actions required for ensuring load integrity and security <input type="checkbox"/> Actions required for transferring loads to different locations <input type="checkbox"/> Actions required for discharging loads into trenches and over edges <input type="checkbox"/> Actions required to maintain safe and tidy working areas

Learning outcomes		Assessment criteria	Unit amplification
2	1.5	Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting
	2.1	Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2	Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Travelling (in a loaded and unloaded state) over rough terrain, up and down a slope, stop and start on the slope in both up and down directions <input type="checkbox"/> Passing through a chicane executing full right- and left-hand turns in a forward and reverse direction (unloaded only) <input type="checkbox"/> Reversing (loaded only) in a straight line for a specified distance and pass through a restriction at the end of the run
	2.3	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Ensuring the suitability of the tipping and loading area <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Positioning the dumper for loading <input type="checkbox"/> Receiving a load <input type="checkbox"/> Discharging the load into an edge or excavation <input type="checkbox"/> Cleaning out the skip fully <input type="checkbox"/> Parking the machine
	2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 4: Operating an Excavator 180° – Below 5 Tonnes

Unit reference number: F/503/6449

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating 180° excavators to excavate ground in the workplace within the relevant sector of industry.

Excavators are commonly used for all works where digging and transportation are required, such as civil engineering works and mining operations. A 180° excavator comprises a boom or arm and a cabin fixed over an undercarriage. 180° excavators come in two categories: above and below 5 tonnes. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate an excavator 180° – below 5 tonnes. This includes identifying components and understanding procedures to carry out excavation in various soil types and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will also develop an understanding of lifting requirements. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in excavating trenches, lifting and rotating loads and placing materials in vehicles or receptacles, as well as grading, levelling and spreading operations. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate an excavator 180° - below 5 tonnes	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel (site and/or highway) <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for excavating duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for excavating differing types of excavations in various types of ground <input type="checkbox"/> Actions required for placing materials into transporting vehicles and receptacles <input type="checkbox"/> Actions required for grading, spreading and levelling ground and materials <input type="checkbox"/> Actions required for attaching and removing buckets <input type="checkbox"/> Actions required for lifting, moving and placing basic slung loads with the rear boom

Learning outcomes		Assessment criteria	Unit amplification
2	1.5	Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Explain how to shut down the machine <input type="checkbox"/> Loading and unloading procedures for machine transporting <input type="checkbox"/> Refuelling procedures
	2.1	Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2	Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Travelling up and down slopes, passing through restrictions in forward and reverse and travelling over rough terrain <input type="checkbox"/> Manoeuvring in restricted spaces and around obstacles
	2.3	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for excavating duties <input type="checkbox"/> Operating excavator near hazards, underground and overhead services safely

Learning outcomes	Assessment criteria	Unit amplification
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Digging two straight trenches to form a 'T' pattern with square starts and finishes <input type="checkbox"/> Loading materials safely and securely into transporting vehicles/receptacles <input type="checkbox"/> Changing the (backhoe) bucket <input type="checkbox"/> Lifting and rotating a load and, on completion, landing the load at a given point and detaching <input type="checkbox"/> Grading, spreading and levelling ground and materials <input type="checkbox"/> Reinstating the work area as required by the contract <input type="checkbox"/> parking the excavator
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Refuelling procedures

Unit 5: Operating an Excavator 180° – Above 5 Tonnes

Unit reference number: A/503/6448

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating 180° excavators to excavate ground in the workplace within the relevant sector of industry.

Excavators are commonly used for all works where digging and transportation are required, such as civil engineering works and mining operations. A 180° excavator comprises a boom or arm and a cabin fixed over an undercarriage. 180° excavators come in two categories: above and below 5 tonnes. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate an excavator 180° – above 5 tonnes. This includes identifying components and understanding procedures to carry out excavation in various soil types and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will also develop an understanding of lifting requirements. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in excavating trenches, lifting and rotating loads and placing materials in vehicles or receptacles, as well as grading, levelling and spreading operations. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Unit 6: Operating a Ride-on Roller

Unit reference number: L/503/6423

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating ride-on rollers to compact materials in the workplace within the relevant sector of industry.

Compacting soil is an important operation in construction and civil engineering projects. Ride-on rollers are used to carry out compaction operations. They are similar to the rollers used in landfill compaction or agricultural tasks and consist of steel drums which act as wheels and are able to compact large areas. They can also be a combination of drum wheels and tyre wheels. The drum can be static or vibratory. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a ride-on roller. This includes identifying components and understanding the requirement to compact loose granular materials to specification, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a ride-on roller and will be able to demonstrate competence in compacting straight runs and a radius. The emphasis is on compliance with manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices, and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Unit 9: Operating a Skid Steer Loader

Unit reference number: D/503/6426

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating skid steer loaders to extract materials in the workplace within the relevant sector of industry.

As the name suggests, a skid steer loader is used to place materials in transporting vehicles and other receptacles. This small machine can perform a number of labour-saving tasks. The wheels are designed to be independent of each other, meaning that skid steer loaders can move through zero radius, which makes them highly desirable in restricted spaces. This plant plays an important part in moving materials within and outside construction sites, and operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a skid steer loader. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a skid steer loader and will be able to demonstrate competence in loading a vehicle using materials from a stockpile as well as in creating an upward ramp. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a skid steer loader	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces (loaded and unloaded) <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for extraction and loading duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for extracting differing types of materials from stockpiles and other sources <input type="checkbox"/> Actions required for forming stockpiles of segregated materials and constructing (temporary) ramps <input type="checkbox"/> Actions required for sorting and placing materials into transporting vehicles and receptacles <input type="checkbox"/> Actions required for backfilling and levelling ground and materials 	

Learning outcomes		Assessment criteria	Unit amplification
2	1.5	Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting
	2.1	Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2	Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site travel <input type="checkbox"/> Travelling and manoeuvring in a loaded and unloaded state, up and down a slope, stopping and starting on the slope in up and down directions, travelling over rough terrain, reversing (loaded state only) in a straight line and passing through a restriction at the end of the run
	2.3	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the skid steer loader for relevant work activities <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Creating an upward ramp <input type="checkbox"/> Loading material into a vehicle <input type="checkbox"/> Backfilling and levelling ground and materials <input type="checkbox"/> Cleaning and tidying the work area <input type="checkbox"/> Parking the skid steer loader
	2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 10: Operating a Skip Handler

Unit reference number: Y/503/6425

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating skip handlers to lift and transfer loads in the workplace within the relevant sector of industry.

As the name suggests, skip handlers are used to move and transfer loads to desired locations. This plant plays an important part in moving materials within and outside construction sites, and operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a skip handler. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a skip handler and will be able to demonstrate competence in moving, carrying and unloading a skip to a given location. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification	
1	Understand how to operate a skip handler	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks 	
		1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site and highway travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces, loaded and unloaded <input type="checkbox"/> Actions required for manoeuvring in restricted spaces whilst carrying loads 	
		1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Procedures for ensuring the suitability of the tipping and loading area <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	

Learning outcomes	Assessment criteria	Unit amplification
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Positioning the vehicle for picking up and placing skip(s)/container(s), including areas having height restrictions <input type="checkbox"/> Procedures for retrieving and placing skips or containers of various sizes and weights <input type="checkbox"/> Actions required for depositing loads from a skip or container <input type="checkbox"/> Transferring loads to different locations <input type="checkbox"/> Procedures for ensuring load integrity and security during travel
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Road Traffic Act requirements
2 Be able to operate a Skip Handler	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing the vehicle and skip handler for road travel (loaded and unloaded) <input type="checkbox"/> Travelling to the work area (loaded and unloaded) over uneven terrain and undertake left- and right-hand turns
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Positioning, preparing and setting up the skip handler and loading for each lift <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely

Learning outcomes	Assessment criteria	Unit amplification
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Picking up an empty skip or body and carrying out activity; after completing, depositing the skip/body at a different location <input type="checkbox"/> Picking up a fully-loaded skip/body, securing in preparation for road travel and carrying out activity; after completing, tipping a load from the skip/body at a given position <input type="checkbox"/> Placing a skip/body within a restricted space <input type="checkbox"/> Retrieving a loaded skip or body from a restricted headroom location <input type="checkbox"/> Stowing all equipment and returning the vehicle to the park position <input type="checkbox"/> Parking the vehicle
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 11: Operating a Dump Truck – Rigid Chassis

Unit reference number: T/503/6416

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating dump trucks with a rigid chassis to transport and discharge materials in the workplace within the relevant sector of industry.

Dump trucks are used to move loose earth and other material within or outside construction sites. There are number of types of these trucks to suit different needs of the site work. Dump trucks with rigid chassis have better manoeuvrability capabilities than other types. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a dump truck with rigid chassis. This includes identifying components and understanding procedures to load, transport and discharge and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will develop an understanding of loading requirements. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in receiving, transporting and discharging the load into an excavation. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification
1	Understand how to operate a dump truck – rigid chassis	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel (site and highway) <input type="checkbox"/> Procedures for travelling over rough, undulating ground, steep inclines and level surfaces – loaded and unloaded <input type="checkbox"/> Actions required for manoeuvring in restricted spaces whilst carrying loads
	1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Procedures ensuring the suitability of the tipping and loading area <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	
	1.4	Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for positioning and receiving loads <input type="checkbox"/> Complying with loading procedures <input type="checkbox"/> Actions required for ensuring load integrity and security <input type="checkbox"/> Actions required for transferring loads to different locations <input type="checkbox"/> Actions required for discharging loads into trenches and over edges <input type="checkbox"/> Actions required to maintain safe and tidy working areas 	

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a dump truck – rigid chassis	1.5	Explain how to shut down the machine
		2.1	Prepare the machine for work
		2.2	Drive and manoeuvre the machine
		2.3	Set up the machine for work
		2.4	Undertake the specified work tasks
2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Travelling over a gradient, rough terrain and around obstacles (loaded and unloaded), stopping on the slope in the downwards direction and reversing backwards up the slope for a minimum of 5 metres <input type="checkbox"/> Driving through a restriction (not chicane) – unloaded only <input type="checkbox"/> Ensuring the suitability of the tipping and loading area <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely <input type="checkbox"/> Positioning the dump truck for loading <input type="checkbox"/> Receiving a load <input type="checkbox"/> Discharging the load into the edge or excavation <input type="checkbox"/> Cleaning out the skip fully <input type="checkbox"/> Parking the machine <input type="checkbox"/> Shut down, isolation and securing procedures 	

Unit 12: Operating a Dump Truck – Articulated Chassis

Unit reference number: T/503/6433

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating dump trucks with articulated chassis to transport and discharge materials in the workplace within the relevant sector of industry.

Dump trucks are used to move loose earth and other material within or outside construction sites. There are number of types of these trucks to suit different needs of the site work. Dump trucks with articulated chassis are used for off-road transportation, usually within a construction site. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a dump truck with articulated chassis. This includes identifying components and understanding procedures to load, transport and discharge and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will develop an understanding of loading requirements. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in receiving, transporting and discharging the load into an excavation. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a dump truck – articulated chassis	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks

	2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 13: Operating a Rough Terrain Forklift

Unit reference number: L/503/6440

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for operating rough terrain masted forklifts to lift and transfer loads in the workplace within the relevant sector of industry.

As the name suggests, a forklift consists of two forks to lift and place loads into position. It is a mobile machine and can access hard-to-reach areas. Forklifts generally fall into two categories: industrial and rough terrain. Rough terrain forklifts, as the name implies, are designed to run on rough, unpaved surfaces. They are commonly used on construction sites. These forklifts can have a vertical tower or a telescopic boom. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a rough terrain forklift. This includes identifying components and understanding the requirements to lift and move loads and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a rough terrain forklift and will be able to demonstrate competence in lifting and placing various loads. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a rough terrain forklift	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces (with and without loads) <input type="checkbox"/> Actions required for manoeuvring in restricted spaces (with and without loads)
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for lifting and transferring duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for lifting and removing various loads, up to the full working height of the forklift <input type="checkbox"/> Actions required for transferring and placing loads accurately at given locations <input type="checkbox"/> Actions required for placing and removing loads from a vehicle <input type="checkbox"/> Actions required to maintain safe and tidy working areas
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting

Learning outcomes	Assessment criteria	Unit amplification
2 Be able to operate a rough terrain forklift	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Procedures for travelling in an unloaded state and with load passing through a chicane, executing full right- and left-hand turns in forward and reverse direction <input type="checkbox"/> Procedures for travelling with load, reversing in a straight line and passing through a restriction at the end of the run
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for each lifting and transferring duty <input type="checkbox"/> Operating near hazards, underground and overhead services safely
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Lifting and placing a load onto a loading-out tower and moving forklift away; retrieving the load, lowering to ground level and placing at a given point <input type="checkbox"/> Lifting and placing 3 loads onto a truck bed; after completing, removing all loads from the truck bed <input type="checkbox"/> Stacking 3 loads vertically on top of one another; after completing, de-stacking all of the loads and placing alongside each other in a straight line <input type="checkbox"/> Carrying out undercutting when lifting and placing a load <input type="checkbox"/> Placing all loads on the ground
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 14: Operating a Telescopic Handler

Unit reference number: D/503/6443

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating telescopic handlers to lift and transfer loads in the workplace within the relevant sector of industry.

A telescopic handler or tele-handler is a versatile machine which can perform the tasks of a forklift as well as those of a crane. Various attachments can be fixed to its telescopic boom to move different types of materials, such as pellet loads and buckets. It can lift materials to a desired height as well as transporting them from one place to another. The plant is used both in construction and in agriculture. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a telescopic handler. This includes identifying components and understanding the requirements to lift and move loads, travel and manoeuvre through restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a telescopic handler and will be able to demonstrate competence in lifting and placing various loads. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a telescopic handler	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel (site and highway – where applicable) <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces (with and without loads)
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for lifting and transferring duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for lifting and removing various loads, up to full extension and working height of the telescopic handler <input type="checkbox"/> Actions required for placing and removing loads from a vehicle <input type="checkbox"/> Actions required for attaching and removing buckets <input type="checkbox"/> Actions required to maintain safe and tidy working areas 	

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a telescopic handler	1.5	<ul style="list-style-type: none"> <input type="checkbox"/> Explain how to shut down the machine
		2.1	<ul style="list-style-type: none"> <input type="checkbox"/> Prepare the machine for work <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2	<ul style="list-style-type: none"> <input type="checkbox"/> Drive and manoeuvre the machine <input type="checkbox"/> Configuring and setting up for travel (site and highway - where applicable) <input type="checkbox"/> Procedures for travelling in an unloaded state and with load, up and down a slope, over rough terrain, passing through a chicane, executing full right- and left-hand turns in forward and reverse direction; stopping and restarting on the slope whilst loaded <input type="checkbox"/> Procedures for travelling with load, reversing in a straight line and passing through a restriction 	
	2.3	<ul style="list-style-type: none"> <input type="checkbox"/> Set up the machine for work <input type="checkbox"/> Configuring and setting up the tele-handler for each lift <input type="checkbox"/> Operating near hazards, underground and overhead services safely 	

Learning outcomes	Assessment criteria	Unit amplification
2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Lifting and placing a load onto the loading tower and moving the tele-handler away; retrieving the load, lowering to ground level and placing at a given point <input type="checkbox"/> Lifting and placing 3 loads onto a truck bed; after completing, removing all loads from the truck bed <input type="checkbox"/> Stacking 3 loads vertically on top of one another; after completing, de-stacking all of the loads and placing alongside each other in a straight line <input type="checkbox"/> Lifting a load and placing at ground level at an indicated point using either a full reach (horizontal) of the tele-handler or 240 degrees from the pick up point using full reach (horizontal) of the tele-handler <input type="checkbox"/> Carrying out undercutting when lifting and placing a load <input type="checkbox"/> Placing all loads on the ground <input type="checkbox"/> Configuring the tele-handler for road travel
2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 15: Operating a Hoist

Unit reference number: J/503/6419

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating hoists to lift and transfer loads in the workplace within the relevant sector of industry.

Hoists are used to lift or lower a load. The lifting or lowering of loads is achieved by means of ropes, chains and pulleys. Lifting and lowering loads is an important operation across a range of industrial sectors such as construction and logistics.

The initial focus of the unit is to provide the underpinning knowledge required to operate a hoist. This includes identifying components and understanding capacity and stability issues, as well as carrying out operational and functional checks. Learners will become familiar with the checks required for emergency lowering. Learners will apply this knowledge to operate a hoist and will be able to demonstrate competence in loading and travelling the platform to a given location, as well as travelling in an unloaded state. The emphasis is on compliance with signals, the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a hoist	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Stability, alignment and safety checks <input type="checkbox"/> Checking gates and safety devices function according to specification <input type="checkbox"/> Checking capacity of the hoist to accommodate expected loads and/or passengers <input type="checkbox"/> Pre-use, running and operational checks <input type="checkbox"/> Checking emergency lowering functions
	1.2 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Placing, loading and unloading materials on and off the hoist platform using manual handling techniques <input type="checkbox"/> Preparing the hoist for the required load(s) and/or passengers
	1.3 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Operating the hoist to the limits of operation, both loaded and unloaded <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Safely operating hoist within working limitations
	1.4 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Placing the hoist in an out-of-service condition, isolation and securing procedures

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a hoist	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks, functional and operational checks <input type="checkbox"/> Preparing an exclusion zone in the relevant area <input type="checkbox"/> Agreeing the signal codes with the signaller <input type="checkbox"/> Carrying out the emergency lowering procedure (passenger type only)
		2.2 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for lifting duties <input type="checkbox"/> Operating near hazards, underground and overhead services safely
		2.3 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Travelling the platform unloaded to the full limits of operation <input type="checkbox"/> Placing the load within the platform <input type="checkbox"/> Travelling the platform to a given level and removing the load <input type="checkbox"/> Placing the load within the platform and travelling to a different level <input type="checkbox"/> Travelling the platform to an out-of-service level and removing the load
		2.4 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Placing the hoist out-of-service, isolation and securing procedures

Unit 16: Operating a Mobile Elevating Work Platform – Scissor

Unit reference number: F/503/6421

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding required for preparing and operating scissor-type mobile elevating work platforms (MEWPs) for accessing operations in the workplace within the relevant sector of industry.

Mobile elevating work platforms (MEWPs) are used to carry out work at height. They are used across a range of industrial sectors such as construction, logistics and shipyards. The scissor-type MEWP is suitable if a single worker is to be raised along with materials to the desired working height. It provides a safe working platform with guardrails from which to work. It can be self-propelled and comes in a variety of sizes.

The initial focus of the unit is to provide the underpinning knowledge required to operate a scissor-type mobile elevating work platform (MEWP). This includes identifying components, understanding issues related to positioning the platform and carrying out operational and functional checks. Learners will apply this knowledge to operate a MEWP and will be able to demonstrate competence in accessing the given point at height. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a mobile elevating work platform – scissor	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks <input type="checkbox"/> Emergency lowering functions
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site travel <input type="checkbox"/> Procedures for travelling over level surfaces and inclines <input type="checkbox"/> Procedures and precautions for travelling over rough terrain and on inclines <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for accessing duties <input type="checkbox"/> Positioning the platform for accessing a work position <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for accessing working points up to full operating height <input type="checkbox"/> Actions required for travelling with a raised platform (where applicable)
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting

Learning outcomes	Assessment criteria	Unit amplification
2 Be able to operate a mobile elevating work platform – scissor	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer’s requirements as per the operator’s handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks <input type="checkbox"/> Emergency lowering function check
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site travel <input type="checkbox"/> Travelling to the work area and passing through a chicane, executing full left-hand and right-hand turns <input type="checkbox"/> Travelling the MEWP with the platform raised and passing through a restriction
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing an exclusion zone in the relevant area <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Accessing given points at height <input type="checkbox"/> Parking the MEWP
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 17: Operating a Mobile Elevating Work Platform – Boom

Unit reference number: J/503/6436

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding required for preparing and operating boom-type mobile elevating work platforms (MEWPs) for accessing operations in the workplace within the relevant sector of industry.

Mobile elevating work platforms (MEWPs) are used to carry out work at height. They are used across a range of industrial sectors, such as construction, logistics and shipyards. They can be vehicle- or trailer-mounted or can be self-propelled. The boom can be telescopic or articulated. This group of MEWPs is commonly known as 'cherry pickers'. Health and safety considerations are paramount in the operation due to inherent risks in working at height.

The initial focus of the unit is to provide the underpinning knowledge required to operate a mobile elevating work platform (MEWP). This includes identifying components, understanding issues related to positioning the platform and carrying out operational and functional checks. Learners will become familiar with the checks required for emergency lowering. Learners will apply this knowledge to operate a MEWP and will be able to demonstrate competence in accessing the given point at height, as well as where horizontal reach is required. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a mobile elevating work platform – boom	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks <input type="checkbox"/> Emergency lowering functions
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site travel <input type="checkbox"/> Procedures for travelling over level surfaces (all types), inclines and uneven terrain (self-propelled units only) <input type="checkbox"/> Procedures and precautions for travelling on inclines <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for accessing duties <input type="checkbox"/> Positioning the platform for accessing a work position <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for accessing working points up to full operating height and reach <input type="checkbox"/> Actions required for travelling with a raised platform 	
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting 	

Learning outcomes	Assessment criteria	Unit amplification
2 Be able to operate a mobile elevating work platform – boom	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks <input type="checkbox"/> Emergency lowering function check
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site travel, ensuring machine is set up for intended direction of travel <input type="checkbox"/> Travelling to the work area and passing through a chicane, executing full left-hand and right-hand turns <input type="checkbox"/> Travelling the MEWP with the platform raised and passing through a restriction
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing an exclusion zone in the relevant area <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Accessing given points at height <input type="checkbox"/> Accessing given points requiring use of horizontal reach <input type="checkbox"/> Parking the MEWP
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 18: Operating a Concrete Pump – Trailer Mounted

Unit reference number: D/503/6412

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding required to prepare for operating and operate trailer-mounted concrete pumps to pump and discharge materials in the workplace within the relevant sector of industry.

Concrete is a very important material which is used in new construction works as well as in renovations, refurbishments and upgrades. Concrete pumps are commonly used for in situ concrete operations for structures and components such as slabs, foundations and bridges. Operating a concrete pump safely is an important and transferable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a trailer-mounted concrete pump. This includes identifying components, securing pipes and lines and dealing with blockages, as well as carrying out operational and functional checks. Learners will gain an appreciation of the appropriate consistency of concrete for pumping. Learners will apply this knowledge to operate a concrete pump and will be able to demonstrate competence in pumping and pouring to the specified location, as well as cleaning and dismantling the components ready for movement of the trailer. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a concrete pump – trailer mounted	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Confirming the position and configuring the machine for pumping duties <input type="checkbox"/> Procedures for deploying the outriggers to specification (where applicable) <input type="checkbox"/> Arranging, anchoring and securing all pipes and lines <input type="checkbox"/> Confirming a given mix is suitable for pumping <input type="checkbox"/> Procedures for arranging, using and complying with communication procedures <input type="checkbox"/> Directing the loading/mixer vehicle to position <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.3 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Procedures for pumping and controlling materials accurately to the desired pour location <input type="checkbox"/> Blockage occurrences and solution methods available to overcome them <input type="checkbox"/> Actions required for maintaining safe working situations <input type="checkbox"/> End-of-use cleaning procedures

Learning outcomes		Assessment criteria	Unit amplification
2	1.4	Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures
	2.1	Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Ensuring that the trailer is secure and segregating the working area <input type="checkbox"/> Preparing for the relevant work following the given pipeline specification <input type="checkbox"/> Lining the pipes and placing hoses with suitable grout <input type="checkbox"/> Directing the material-carrying vehicle into position <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.3	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Pumping the material to the pour location whilst following signals <input type="checkbox"/> Stopping and restarting the pour during work <input type="checkbox"/> Cleaning the pumping system components <input type="checkbox"/> Dismantling and storing all components ready for the movement of the trailer
	2.4	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 19: Operating a Grader

Unit reference number: A/503/6434

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for operating graders to form and shape materials in the workplace within the relevant sector of industry.

A grader is a piece of heavy equipment which is used in earthworks to help achieve a smooth and level surface. They are used in the construction of roads or where the ground surface needs to be rendered smooth. The blade attached to the grader helps to carry out levelling operations. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a grader. This includes identifying components and understanding procedures to carry out grading, spreading and levelling operations and travel over rough terrains and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in trimming banks, grading, levelling and reinstatement of works. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a grader	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
		1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for general grading and side-casting duties <input type="checkbox"/> Configuring and setting up the machine for high bank work <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
		1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for grading, spreading materials and levelling ground <input type="checkbox"/> Actions required to produce even finishes
		1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a grader	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
		2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site travel <input type="checkbox"/> Travelling to the work area, up and down the slope, passing through a restriction and travelling over rough terrain
		2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the grader for relevant work activities <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
		2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Trimming the bank to an agreed angle <input type="checkbox"/> Grading and levelling an area to specification <input type="checkbox"/> Reinstating the work area to level <input type="checkbox"/> Parking the grader
		2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 20: Operating a Wheeled Loading Shovel

Unit reference number: K/503/6428

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating wheeled loading shovels to extract materials in the workplace within the relevant sector of industry.

A wheeled loading shovel is a loader which is used to place materials in transporting vehicles and other receptacles. They can be small and compact and hence easy to manoeuvre, or can be of a more powerful variety. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a wheeled loading shovel. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a wheeled loading shovel, and will be able to demonstrate competence in loading a vehicle using materials from a stockpile as well as in creating an upward ramp. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a wheeled loading shovel	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site and highway travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces (loaded and unloaded) <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for extraction and loading duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for extracting differing types of materials from stockpiles and other sources <input type="checkbox"/> Actions required for forming stockpiles of segregated materials and constructing (temporary) ramps <input type="checkbox"/> Actions required for sorting and placing materials into transporting vehicles and receptacles <input type="checkbox"/> Actions required for spreading and levelling ground and materials

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a wheeled loading shovel	1.5	<p>Explain how to shut down the machine</p> <ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting
		2.1	<p>Prepare the machine for work</p> <ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
		2.2	<p>Drive and manoeuvre the machine</p> <ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site and highway travel <input type="checkbox"/> Travelling and manoeuvring in a loaded and unloaded state, up and down a slope, stopping and starting on the slope in up and down directions, travelling over rough terrain, reversing (loaded only) in a straight line and passing through a restriction at the end of the run
		2.3	<p>Set up the machine for work</p> <ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the machine for extraction and loading duties <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
		2.4	<p>Undertake the specified work tasks</p> <ul style="list-style-type: none"> <input type="checkbox"/> Creating an upward ramp (using material from a bank) <input type="checkbox"/> Loading material into a vehicle <input type="checkbox"/> Spreading and levelling ground and materials <input type="checkbox"/> Cleaning and tidying the work area <input type="checkbox"/> Parking the wheeled loading shovel
		2.5	<p>Shut down the machine</p> <ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 21: Operating a Crawler-Tractor/Dozer

Unit reference number: K/503/6431

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating crawler-tractor/dozers for excavating/forming operations in the workplace within the relevant sector of industry.

A crawler-tractor is a type of construction vehicle which instead of using wheels uses tracks. Using tracks means that the load is spread over a large area, making such machines suitable for use in a variety of site conditions. A number of attachments can be added to a crawler-tractor. When a blade is attached to the machine, it is then called a dozer, which is used for a variety of excavation operations. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a crawler-tractor/dozer. This includes identifying components and understanding procedures to carry out excavation in various soil types and travel over rough terrains, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in excavating trenches, constructing ramps and carrying out grading, spreading and levelling tasks. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a crawler-tractor/dozer	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for site travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for excavating duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

		2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Parking the crawler-tractor/dozer <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Refuelling procedures

Unit 22: Operating a Concrete Pump – Truck-mounted Boom

Unit reference number: Y/503/6411

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding required to prepare for operating and operate truck-mounted boom concrete pumps to pump and discharge materials in the workplace within the relevant sector of industry.

Concrete is a very important material which is used in new construction works as well as in renovations, refurbishments and upgrades. Concrete pumps are commonly used for in situ concrete operations for structures and components such as slabs, foundations and bridges. Operating a concrete pump safely is an important and transferable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a truck-mounted concrete pump. This includes identifying components, securing pipes and lines and dealing with blockages, as well as carrying out operational and functional checks. Learners will gain an appreciation of the appropriate consistency of concrete for pumping. Learners will apply this knowledge to operate a concrete pump. They will be able to demonstrate competence in pumping and pouring to the specified location and changing boom radius during the pour, as well as cleaning and dismantling the components ready for moving the truck. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria		Unit amplification
1 Understand how to operate a concrete pump – truck-mounted boom	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel (site and highway) <input type="checkbox"/> Procedures for travelling the vehicle to an area of work <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Confirming the position and configuring the machine for pumping duties <input type="checkbox"/> Procedures for deploying the outriggers to specification (where applicable) <input type="checkbox"/> Arranging, anchoring and securing all pipes and lines <input type="checkbox"/> Confirming a given mix is suitable for pumping <input type="checkbox"/> Procedures for arranging, using and complying with communication procedures <input type="checkbox"/> Directing the loading/mixer vehicle to position <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

Learning outcomes		Assessment criteria	Unit amplification
2	1.4	Explain how to undertake the specified work tasks	<input type="checkbox"/> Procedures for pumping and controlling materials accurately to the desired pour location
			<input type="checkbox"/> Blockage occurrences and solution methods available to overcome them
	1.5	Explain how to shut down the machine	<input type="checkbox"/> Actions required for maintaining safe working situations
			<input type="checkbox"/> End-of-use cleaning procedures
	2.1	Prepare the machine for work	<input type="checkbox"/> Shut down, isolation and securing procedures
			<input type="checkbox"/> Road traffic requirements
2.2	Drive and manoeuvre the machine	<input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation	
		<input type="checkbox"/> Pre-use checks	
2.3	Set up the machine for work	<input type="checkbox"/> Functional and operational checks	
		<input type="checkbox"/> Configuring and setting up for travel (site and highway)	
2	Be able to operate a concrete pump – truck-mounted boom	Set up the machine for work	<input type="checkbox"/> Procedures for travelling the vehicle to the work area and manoeuvring in restricted spaces
			<input type="checkbox"/> Positioning the truck and preparing for the relevant work following the given pipeline specification
			<input type="checkbox"/> Lining the pipes and placing hoses with suitable grout
			<input type="checkbox"/> Directing the material-carrying vehicle into position
			<input type="checkbox"/> Operating machine near hazards, underground and overhead services safely

Learning outcomes	Assessment criteria	Unit amplification
2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Pumping the material to the pour location whilst following signals <input type="checkbox"/> Changing the boom radius whilst pumping material with end of hose kept at a constant height <input type="checkbox"/> Stopping and restarting the pour during work <input type="checkbox"/> Cleaning the pumping system components <input type="checkbox"/> Dismantling and storing all components ready for the movement of the trailer <input type="checkbox"/> Parking the machine
2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 23: Operating a Tracked Loading Shovel

Unit reference number: H/503/6458

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating tracked loading shovels to extract materials in the workplace within the relevant sector of industry.

A tracked loading shovel is a loader which is used to place materials in transporting vehicles and other receptacles. Using tracks means that the load is spread over a large area, making such machines suitable for use in a variety of site conditions. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a tracked loading shovel. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a tracked loading shovel. They will be able to demonstrate competence in loading a vehicle using materials from a stockpile, as well as in creating an upward ramp. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria		Unit amplification
1	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site and highway travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces (loaded and unloaded) <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for extraction and loading duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4	Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for extracting differing types of materials from stockpiles and other sources <input type="checkbox"/> Actions required for forming stockpiles of segregated materials and constructing (temporary) ramps <input type="checkbox"/> Actions required for sorting and placing materials into transporting vehicles and receptacles <input type="checkbox"/> Actions required for spreading and levelling ground and materials

Learning outcomes		Assessment criteria	Unit amplification
2	1.5	Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting
	2.1	Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2	Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site and highway travel <input type="checkbox"/> Travelling and manoeuvring in a loaded and unloaded state, up and down a slope, stopping and starting on the slope in up and down directions, travelling over rough terrain, reversing (loaded only) in a straight line and passing through a restriction at the end of the run
	2.3	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the machine for extraction and loading duties <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Creating an upward ramp (using material from a bank) <input type="checkbox"/> Loading material into a vehicle <input type="checkbox"/> Spreading and levelling ground and materials <input type="checkbox"/> Cleaning and tidying the work area <input type="checkbox"/> Parking the loading shovel
	2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 24: Operating a Motorised Scraper

Unit reference number: A/503/6420

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating motorised scrapers to extract, transport and distribute materials in the workplace within the relevant sector of industry.

A motorised scraper is a piece of heavy equipment which is used for earth-moving operations. It is very efficient on short haulages where cut and fill areas are close to each other. The blade attached to the scraper helps to carry out these operations. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a motorised scraper. This includes identifying components and understanding procedures to carry out excavation and stockpiling operations and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate the plant, and will be able to demonstrate competence in excavating and forming stockpiles as well as in making formation levels. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a motorised scraper	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces – loaded and unloaded <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Positioning and setting up the machine to load and deposit materials/ground <input type="checkbox"/> Factors that ensure the suitability of the loading and depositing area <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for excavating various types of ground <input type="checkbox"/> Actions required for transferring and depositing loads to different locations <input type="checkbox"/> Actions required for forming stockpiles of material <input type="checkbox"/> Actions required for grading, spreading and levelling ground and materials <input type="checkbox"/> Actions required for performing push loading techniques 	

Learning outcomes		Assessment criteria	Unit amplification	
2	Be able to operate a motorised scraper	1.5	<ul style="list-style-type: none"> <input type="checkbox"/> Explain how to shut down the machine 	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures
		2.1	Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Loading and unloading procedures for machine transporting <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks

		2.3	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the scraper for relevant work activities <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
		2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Excavating a given area and forming stockpiles as instructed <input type="checkbox"/> Depositing loads to formation level and discharging to a uniform length <input type="checkbox"/> Parking the motorised scraper
		2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 25: Operating a Crawler-Tractor – Side Boom

Unit reference number: H/503/6430

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding required for preparing and operating crawler-tractors with side boom to lift and transfer loads in the workplace within the relevant sector of industry.

A crawler-tractor is a type of construction vehicle which instead of using wheels uses tracks. Using tracks means that the load is spread over a large area, making such machines suitable for use in a variety of site conditions. A number of attachments can be added to a crawler-tractor, such as a side boom, which enables the machine to lift and place heavy loads, for example large pipe sections. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a crawler-tractor with side boom. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a crawler-tractor with side boom, and will be able to demonstrate competence in picking up and travelling with a steel pipe to and from a trench, as well as in stowing all the equipment safely. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a crawler-tractor – side boom	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks

2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 26: Operating a Trencher

Unit reference number: M/503/6446

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating trenchers to extract materials in the workplace within the relevant sector of industry.

Trenchers are used to dig trenches for laying drainage, pipes or cables. A trencher can be tracked, wheeled or chained and can be a mini or a portable one. Each type has its own application depending on the location or extent of work. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a trencher. This includes identifying components and understanding procedures to carry out excavation in various soil types and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will also develop an understanding of working with different types of soils and how to maintain a consistent depth. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in cutting vertical trenches and straight excavations and placing materials in vehicles or receptacles. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a trencher	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
		1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for excavating duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
		1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for producing cut trenches in various types of ground <input type="checkbox"/> Actions required for producing consistent depths of cut in level and uneven ground <input type="checkbox"/> Actions required for cutting trenches up and down inclines <input type="checkbox"/> Techniques used for radius cutting <input type="checkbox"/> Actions required for placing materials into transporting vehicles/receptacles

Unit 27: Operating a Crawler Crane

Unit reference number: K/503/6414

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating crawler cranes (above 10 tonnes) to lift and transfer loads in the workplace within the relevant sector of industry.

Lifting and moving loads is important across a range of industrial sectors such as construction, offshore and logistics. Cranes are generally used for lifting and moving operations and there are a number of crane varieties available. A crawler crane is a type of crane vehicle which is mounted on tracks. Using tracks means that the load is spread over a large area, making such machines suitable for use in a variety of site conditions without requiring any outriggers.

The initial focus of the unit is to provide the underpinning knowledge required to operate a crawler crane. This includes identifying components and understanding the use and limitations of tools, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a crawler crane and will be able to demonstrate competence in lifting, moving and landing loads in designated areas, using a variety of rope falls and moving through various radii. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a crawler crane	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks required to place the crane into service <input type="checkbox"/> Procedures that must be followed when accessing the jib for inspection and maintenance purposes
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for travel <input type="checkbox"/> Procedures required for travelling to an area of work <input type="checkbox"/> Actions required for manoeuvring in restricted spaces

2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 28: Operating a Tower Crane

Unit reference number: H/503/6427

QCF level: 2

Credit value: 10

Guided learning hours: 60

Unit aim

This unit provides learners with the knowledge and understanding for operating tower cranes to lift and transfer loads in the workplace within the relevant sector of industry.

Lifting and moving loads is important across a range of industrial sectors such as construction, offshore and logistics. Cranes are generally used for lifting and moving operations, and there are a number of crane varieties available. A tower crane is used for construction of tall structures, and comprises a long jib, a counter short jib, slewing equipment, a base and a mast. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a tower crane. This includes identifying components and understanding how to select lifting accessories, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a tower crane and will be able to demonstrate competence in lifting, moving and landing loads in designated areas through various radii. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria		Unit amplification
1 Understand how to operate a tower crane	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks required to place the tower crane into service <input type="checkbox"/> Procedures that must be followed when accessing the jib for inspection and maintenance purposes

	2.4 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Placing the crane in out-of-service mode <input type="checkbox"/> Carrying out isolation and securing procedures

Unit 29: Operating a Lorry Loader

Unit reference number: F/503/6418

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating lorry loaders/knuckle boom cranes to lift and transfer loads in the workplace within the relevant sector of industry.

Lorry loaders are used in the construction industry to move and lift loads and can carry out tasks traditionally undertaken by mobile and tower cranes. On smaller machines, the crane is integral to the lorry loader. Care should be taken to plan lifting operations with the size of the plant in view. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a lorry loader. This includes identifying components and understanding the use and limitations of tools, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a lorry loader and will be able to demonstrate competence in lifting, placing, moving and securing loads ready for travel. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification
1	Understand how to operate a lorry loader	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring the vehicle and loader crane for travel <input type="checkbox"/> Procedures for travelling the vehicle to an area of work <input type="checkbox"/> Actions required for manoeuvring in restricted spaces

Unit 30: Performing Slinger/ Signaller Duties

Unit reference number: J/503/6453

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for slinging and signalling the movement of loads (secondary role) in the workplace within the relevant sector of industry.

This unit is designed for those undertaking slinger/signaller duties in a secondary or part-time role in support of a learner's main occupation. Other units of competence exist for those undertaking slinging and signalling as a main occupation.

Although slinger and signaller perform different tasks, usually one person is trained to perform both jobs. Their role in lifting and movement operations is important and the skills to carry out slinging and signalling competently are valuable, not only in the construction industry but wherever cranes are used to lift and move loads.

The initial focus of the unit is to provide the underpinning knowledge required to carry out slinging and signalling duties. This includes identifying components and understanding the use and limitations of lifting accessories, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to demonstrate competence in selecting the right accessory and carrying out signalling and slinging duties to safely lift, move and land loads in designated areas. The emphasis is on compliance with the manufacturer's instructions, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria		Unit amplification
1 Understand how to perform slinger/signaller duties	1.1	Explain procedures for obtaining information and preparing lifting accessories for work activities	<ul style="list-style-type: none"> □ Purpose, construction, controls and terminology of differing types of lifting accessories □ Manufacturer's requirements as per technical data, other types of information source and relevant regulations and legislation □ Interpreting and extracting information on all relevant documentation □ Pre-use checks on non-specialist lifting accessories and identification of non-serviceable items □ Procedures for placing non-serviceable items out-of-service
	1.2	Explain how to set up and prepare the work area, and the procedures required to identify, select and use lifting accessories	<ul style="list-style-type: none"> □ Identifying centres of gravity and estimating weights of loads □ Actions required to prepare the area of operation for carrying out lifting duties □ Selecting relevant lifting accessory for a given load □ Actions required for dealing with hazards, underground and overhead services

Learning outcomes	Assessment criteria	Unit amplification
	<p>1.3 Explain how to undertake the specified work tasks</p>	<ul style="list-style-type: none"> □ Actions required for securing various types of load to a lifting hook, using the relevant lifting accessory and following correct procedures □ Ensuring load balance, security and integrity □ Processes required for directing and guiding the movement of loads to different types of location □ Actions required for accurately placing loads □ Complying with organisational communication procedures □ Maintaining safe working situations
	<p>1.4 Explain how to complete the specified work tasks</p>	<ul style="list-style-type: none"> □ Out-of-service and securing procedures for lifting accessories and the work area
<p>2 Be able to perform slinger/signaller duties</p>	<p>2.1 Obtain and extract relevant lift information, and prepare lifting accessories for use</p>	<ul style="list-style-type: none"> □ Checking equipment for functional and operational serviceability □ Identifying and impounding all unserviceable items □ Identifying certification not meeting current legislation or regulations
	<p>2.2 Set up the work area for lifting duties and select lifting accessories</p>	<ul style="list-style-type: none"> □ Establishing the weight and features of each load prior to lifting □ Establishing communication methods (visual and with radios) with the crane operator □ Selecting the relevant lifting accessory for the load to be lifted

Learning outcomes	Assessment criteria		Unit amplification
2.3	Undertake the specified work tasks		<ul style="list-style-type: none"> <input type="checkbox"/> Attaching the selection lifting accessory and preparing each load for lifting <input type="checkbox"/> Lifting a load from ground level, guiding and landing in a designated place out of sight of the crane operator; after landing, returning the load to the original start point, landing at a designated place and detaching the accessory <input type="checkbox"/> Lifting a load from ground level, guiding to maximum radius of the crane, slewing for at least 180 degrees and landing at a designated place, mid radius; after landing, detaching the accessory <input type="checkbox"/> Lifting a load from ground level, guiding to a minimum radius of the crane, slewing for at least 360 degrees and landing at a designated place, involving a change of radius; after landing, detaching the accessory
2.4	Complete the specified work tasks		<ul style="list-style-type: none"> <input type="checkbox"/> Making safe all loads following each activity <input type="checkbox"/> Collecting and storing all lifting accessories

Unit 31: Operating a Mobile Crane

Unit reference number: F/503/6435

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating mobile cranes to lift and transfer loads in the workplace within the relevant sector of industry.

Lifting and moving loads is important across a range of industrial sectors such as construction, offshore and logistics. Cranes are generally used for lifting and moving operations, and there are a number of crane varieties available. A mobile crane is mounted on carriers, which can be either crawler or with tyres. Such cranes have a telescopic boom and are generally hydraulically operated.

The initial focus of the unit is to provide the underpinning knowledge required to operate a mobile crane. This includes identifying components and understanding the use and limitations of tools, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a mobile crane, and will be able to demonstrate competence in lifting, moving and landing loads in designated areas through various radii. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria		Unit amplification
1 Understand how to operate a mobile crane	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks required to place the crane into service <input type="checkbox"/> Procedures that must be followed when accessing the jib for inspection and maintenance purposes
	1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for travel (site and highway) <input type="checkbox"/> Procedures required for travelling to an area of work <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the crane for lifting duties <input type="checkbox"/> Deploying outriggers to specification (where applicable) <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

Learning outcomes	Assessment criteria	Unit amplification
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for programming/setting-up rated capacity indicators for lifting duties <input type="checkbox"/> Identifying weights and centres of gravity of loads <input type="checkbox"/> Actions required for lifting various loads using the full radius and slewing capabilities of a crane <input type="checkbox"/> Techniques for accurately placing loads <input type="checkbox"/> Actions required for changing falls of rope on a hook block <input type="checkbox"/> Actions required for minimising the swinging of loads <input type="checkbox"/> Actions required for moving loads through machine travel (where applicable) <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Actions required to maintain safe working situations <input type="checkbox"/> Rigging and de-rigging procedures when fitting fly jibs or boom extensions <input type="checkbox"/> Dismantling the crane in preparation of movement
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures
2 Be able to operate a mobile crane	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks, functional and operational checks

Learning outcomes	Assessment criteria	Unit amplification
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for travel (site and highway) <input type="checkbox"/> Travelling to the work area and reversing into a restricted space
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the machine for each lift <input type="checkbox"/> Changing the number of falls on the hook block from 2 to 3, or 3 to 2 <input type="checkbox"/> Operating near hazards, underground and overhead services safely
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Lifting a load at a designated place; moving back to and rotating; landing the load at mid-radius at a designated place <input type="checkbox"/> Lifting a load and simulating a concrete pouring exercise; landing the load at a designated place <input type="checkbox"/> Lifting a load using three falls of rope and landing at a designated place <input type="checkbox"/> Lifting a load using a minimum radius and rotate maintaining minimum radius; landing the load at a designated place <input type="checkbox"/> Lifting a load from a given point and landing at a designated place out of sight <input type="checkbox"/> Recovering simulated 2-metre load swings <input type="checkbox"/> Making safe all loads after each activity <input type="checkbox"/> Configuring the crane for travel <input type="checkbox"/> Parking the machine

Learning outcomes	Assessment criteria	Unit amplification
2.5	Shut down the machine	<input type="checkbox"/> Shut down, isolation and securing procedures

Unit 32: Operating a Pedestrian Operated Tower Crane

Unit reference number: L/503/6437

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating pedestrian operated tower cranes to lift and transfer loads in the workplace within the relevant sector of industry.

Lifting and moving loads is important across a range of industrial sectors such as construction, offshore and logistics. Cranes are generally used for lifting and moving operations. There are a number of crane varieties available. A tower crane is used for constructing tall structures and comprises a long jib, a counter short jib, slewing equipment, a base and a mast. If the operator is working from the ground, the crane is a pedestrian operated tower crane or POTC.

The initial focus of the unit is to provide the underpinning knowledge required to operate a POTC. This includes identifying components and understanding how to select lifting accessories, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a POTC and will be able to demonstrate competence in lifting, moving and landing loads in designated areas through various radii. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a pedestrian operated tower crane	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks required to place the pedestrian operated tower crane (POTC) into service
	1.2 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the POTC for lifting duties <input type="checkbox"/> Identifying centres of gravity and estimating weights of loads <input type="checkbox"/> Actions required for selecting and using lifting accessories <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

Learning outcomes	Assessment criteria	Unit amplification
	1.3 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for securing various types of load to a lifting hook using the relevant lifting accessory and following correct procedures <input type="checkbox"/> Actions required for ensuring load balance, security and integrity <input type="checkbox"/> Actions required for lifting various loads using the full radius and slewing capabilities of a POTC <input type="checkbox"/> Actions required for accurately placing loads <input type="checkbox"/> Actions required for attaching and using boom extensions and fly jibs <input type="checkbox"/> Actions required for minimising the swinging of loads <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Actions required to maintain safe working situations <input type="checkbox"/> Altering hoist rope falls
	1.4 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing the crane for out-of-service, isolation and securing procedures
2 Be able to operate a pedestrian operated tower crane	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks, functional and operational checks and placing the POTC into service

Learning outcomes	Assessment criteria	Unit amplification
2.2	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the POTC for lifting duties <input type="checkbox"/> Safely identifying centres of gravity and estimating weights of loads <input type="checkbox"/> Selecting and using lifting accessories safely <input type="checkbox"/> Operating near hazards, underground and overhead services safely
2.3	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Lifting a load, rotating through 180 degrees without changing radius before landing at minimum radius; after completing, lifting and landing the load in a designated place at mid radius <input type="checkbox"/> Lifting a load at mid radius and rotating over a structure and landing in a designated position at 75% radius; after completing, returning the load to the original start point and landing in a designated place <input type="checkbox"/> Lifting a load at minimum radius and rotating through 360 degrees and landing in a designated place <input type="checkbox"/> Simulating pouring a wall by travelling a load in a straight line for a designated distance <input type="checkbox"/> Recovering simulated 2-metre load swings <input type="checkbox"/> Lifting a load from a given point and landing in a designated place out of sight <input type="checkbox"/> Making safe all loads after each activity
2.4	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Placing the POTC in out-of-service mode <input type="checkbox"/> Carrying out isolation and securing procedures

Unit 33: Operating a Compact Crane

Unit reference number: M/503/6429

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding required to operate compact cranes to lift and transfer loads in the workplace within the relevant sector of industry.

Lifting and moving loads is important across a range of industrial sectors such as construction, offshore and logistics. Cranes are generally used for lifting and moving operations. There are a number of crane varieties available. As the name suggests, compact cranes are useful when there is restricted workspace or where lifting is required to inaccessible areas.

The initial focus of the unit is to provide the underpinning knowledge required to operate a compact crane. This includes identifying components and understanding the use and limitations of tools, as well as carrying out operational and functional checks. Learners will gain an appreciation of how to balance loads to avoid swinging. Learners will apply this knowledge to operate a compact crane and will be able to demonstrate competence in lifting, moving and landing loads in designated areas. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a compact crane	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for travel <input type="checkbox"/> Procedures required for travelling to an area of work <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the crane for lifting duties <input type="checkbox"/> Actions required for programming/setting up rated capacity indicators or load moment indicators for lifting duties <input type="checkbox"/> Identifying weights and centres of gravity of loads <input type="checkbox"/> Deploying outriggers to specification (where applicable) <input type="checkbox"/> Function, use and limitations of jib extensions <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

Learning outcomes	Assessment criteria	Unit amplification
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for lifting various loads using the full radius and slewing capabilities of a crane <input type="checkbox"/> Techniques for accurately placing loads <input type="checkbox"/> Actions required for minimising the swinging of loads <input type="checkbox"/> Actions required for moving loads through machine travel (where applicable) <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Actions required to maintain safe working situations <input type="checkbox"/> Types of lifting accessories compatible with compact crane use <input type="checkbox"/> Limitations of slinging with compact cranes

2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Lifting loads and landing at minimum radius at a designated place <input type="checkbox"/> Lifting and travelling with loads and landing at a designated place <input type="checkbox"/> Making safe all loads after each activity <input type="checkbox"/> Parking the machine
2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 34: Operating a Crusher

Unit reference number: H/503/6413

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating crushers to process materials in the workplace within the relevant sector of industry.

Crushers are used to break down large rocks into aggregates of specified sizes. Crushers are also used for recycling and disposal of materials. During a crushing operation, sufficient force has to be applied to break or crush the material. Once crushed, the material or aggregate is sorted according to the specified grading. A crusher can be fixed or can be a mobile unit carrying out operations on site.

The initial focus of the unit is to provide the underpinning knowledge required to operate a crusher. This includes identifying components and understanding procedures to crush and sort material and to travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will gain an appreciation of a material's suitability for crushing. Learners will apply this knowledge to operate a crusher, and will be able to demonstrate competence in converting uncrushed material into processed material of a specified grade. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification
1	Understand how to operate a crusher	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for travel (mobile units) <input type="checkbox"/> Procedures for travelling over rough, undulating ground and level surfaces (mobile units) <input type="checkbox"/> Actions required for manoeuvring in restricted spaces (mobile units)
		1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for crushing duties to produce aggregate to specified sizes <input type="checkbox"/> Procedures ensuring suitability of the discharge area <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

Learning outcomes	Assessment criteria	Unit amplification
	<p>1.4 Explain how to undertake the specified work tasks</p>	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for crushing differing types of materials <input type="checkbox"/> Actions required for sorting materials into graded sizes <input type="checkbox"/> Actions required for controlling and maintaining the work flow rate <input type="checkbox"/> Appropriate communication procedures before and during work <input type="checkbox"/> Procedures for removing blockages and foreign objects <input type="checkbox"/> Cleaning down the machine and working area

Learning outcomes	Assessment criteria	Unit amplification
2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Ensuring the material is suitable for crushing and setting the crusher for the given specification <input type="checkbox"/> Agreeing the work process and signals with others involved in the crushing process <input type="checkbox"/> Starting the crusher and engaging all systems <input type="checkbox"/> Converting uncrushed material into processed material of a specified grade <input type="checkbox"/> Operating the crusher until a stockpile is produced to required height <input type="checkbox"/> Carrying out emergency stop of operations during the crushing process <input type="checkbox"/> Clearing all material from the crusher and immediate area
2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 35:

Operating a Screener

Unit reference number: R/503/6441

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating screeners to process materials in the workplace within the relevant sector of industry.

Screeners are used to sift through material such as gravel, aggregates and topsoil, and sort it according to the required sizes. Screeners are also used for recycling and disposal of materials. A screener can be fixed or can be a mobile unit carrying out operations on site. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a screener. This includes identifying components and understanding procedures to screen and sort material and to travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will gain an understanding of how to deal with blockages. Learners will apply this knowledge to operate a screener and will be able to demonstrate competence in screening material into three different sizes and forming stockpiles. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification
1	Understand how to operate a screener	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for travel (mobile units) <input type="checkbox"/> Procedures for travelling over rough, undulating ground and level surfaces (mobile units) <input type="checkbox"/> Actions required for manoeuvring in restricted spaces (mobile units)

Unit 36: Operating a Dragline

Unit reference number: M/503/6432

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating draglines to extract materials in the workplace within the relevant sector of industry.

A dragline is a piece of heavy equipment used in civil engineering and mining and is considered to be one of the largest pieces of mobile equipment ever built. A dragline is most efficient and is frequently used where excavation is required below the base. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a dragline. This includes identifying components and understanding procedures to carry out excavation in various soil types and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will develop an understanding of lifting requirements. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in excavating, stockpiling and placing materials in vehicles or receptacles. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a dragline	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for excavating duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for excavating different types of excavations in various types of ground <input type="checkbox"/> Actions required for placing materials into transporting vehicles and receptacles <input type="checkbox"/> Actions required for adjusting the tipping rope for different materials <input type="checkbox"/> Lifting requirements that affect the operation of a dragline
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a dragline	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
		2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for travel <input type="checkbox"/> Travelling to the work area, up and down a slope, passing through a restriction and travelling over rough terrain
		2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the dragline for the relevant work activities <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
		2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Excavating soil and forming two stockpiles <input type="checkbox"/> Loading material into a vehicle/receptacle <input type="checkbox"/> Parking the dragline
		2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 37:

Operating a Piling Rig – Tripod

Unit reference number: R/503/6455

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for operating a tripod piling rig to construct and form in the workplace within the relevant sector of industry.

A piling rig is used to drill in various types of soil so that piles can be formed. It is generally used for foundation construction in buildings, bridges and so on. It can bore through dry or wet soil and also through rock when an appropriate tool is attached. The tripod rig is lightweight and is suitable for sites with difficult access and low headroom. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a tripod piling rig. This includes identifying components, understanding procedures to accurately form piles and carrying out operational and functional checks. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in forming piles and ensuring that they are plumb. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a piling rig – tripod	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring, positioning and setting up the machine for driven and bored works <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
		1.3 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for accurately forming bored piles to completion <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Maintaining safe working situations <input type="checkbox"/> Lifting requirements and limitations using a tripod piling rig
	1.4 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut-down, isolation and securing procedures <input type="checkbox"/> De-rigging the tripod and preparing for movement 	
2	Be able to operate a piling rig – tripod	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks, functional and operational checks

Learning outcomes	Assessment criteria	Unit amplification
	2.2 Set up the machine for work	<input type="checkbox"/> Positioning rig and setting up for boring work <input type="checkbox"/> Operating near hazards, underground and overhead services safely
	2.3 Undertake the specified work tasks	<input type="checkbox"/> Forming bored piles to specification <input type="checkbox"/> Ensuring the bore is plumb throughout the boring activity
	2.4 Shut down the machine	<input type="checkbox"/> Carrying out isolation and securing procedures <input type="checkbox"/> Cleaning the area and dismantling the rig ready for transportation

Unit 38: Operating a Piling Rig – Driven Below 15 Tonnes

Unit reference number: Y/503/6439

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for operating a driven piling rig to construct and form in the workplace within the relevant sector of industry.

A driven piling rig is used to drive piles into soil so that buildings and other structures can be supported. Such a rig can use different attachments for drilling depending on the work requirements. This category of rig is light and versatile and can be used over ground with low bearing capacity. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a piling rig – driven below 15 tonnes. This includes identifying components and understanding procedures to accurately drive piles and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in installing displacement piles and ensuring that they are plumb. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a piling rig – driven below 15 tonnes	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine ready for travel <input type="checkbox"/> Actions required for travelling over rough, undulating ground <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring, positioning and setting up the machine for driven works <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services 	
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for accurately installing displacement piles to completion <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Maintaining safe working situations <input type="checkbox"/> Lifting requirements and limitations using a piling rig 	
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut-down, isolation and securing procedures <input type="checkbox"/> De-rigging, loading and unloading procedures for machine transporting 	

Learning outcomes	Assessment criteria	Unit amplification
2 Be able to operate a piling rig – driven below 15 tonnes	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer’s requirements as per the operator’s handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks, functional and operational checks
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Travelling to the work area and negotiating restrictions and obstacles
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring, preparing and setting up the rig for driven works <input type="checkbox"/> Operating near hazards, underground and overhead services safely
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Installing given displacement piles to the given specification <input type="checkbox"/> Ensuring the bore is plumb throughout the boring activity <input type="checkbox"/> Configuring the rig for travel <input type="checkbox"/> Parking the rig
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Carrying out isolation and securing procedures

Unit 39: Operating a Piling Rig – Driven Above 15 Tonnes

Unit reference number: J/503/6422

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for operating a driven piling rig to construct and form in the workplace within the relevant sector of industry.

A driven piling rig is used to drive piles into soil so that buildings and other structures can be supported. Such a rig can use different attachments for drilling depending on the work requirements. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a piling rig – driven above 15 tonnes. This includes identifying components and understanding procedures to accurately drive piles and travel over rough terrain and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate the plant and will be able to demonstrate competence in installing displacement piles and ensuring that they are plumb. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards – especially overhead and underground services – to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate a piling rig – driven above 15 tonnes	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine ready for travel <input type="checkbox"/> Actions required for travelling over rough, undulating ground <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring, positioning and setting up the machine for driven works <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for accurately installing displacement piles to completion <input type="checkbox"/> Complying with signals and instructions <input type="checkbox"/> Maintaining safe working situations <input type="checkbox"/> Lifting requirements and limitations using a piling rig
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut-down, isolation and securing procedures <input type="checkbox"/> De-rigging, loading and unloading procedures for machine transporting

Learning outcomes		Assessment criteria	Unit amplification
2	Be able to operate a piling rig – driven above 15 tonnes	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks, functional and operational checks

Unit 42: Operating an Agricultural Tractor

Unit reference number: T/503/6447

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating agricultural-based tractors for construction-related activities in the workplace within the relevant sector of industry.

Agricultural tractors are versatile machines. Though they are used on farms for a range of agricultural tasks, they are also used extensively in construction works. A number of tools and implements can be attached to a tractor, including backhoe loaders and buckets. A tractor can also be used for moving a trailer, for construction, agricultural, or other purposes. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate an agricultural tractor. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate an agricultural tractor and will be able to demonstrate competence in attaching, removing and travelling with mounted or power-driven implements. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate an agricultural tractor	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for site and highway travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces, with and without mounted and towed implements <input type="checkbox"/> Actions required for manoeuvring in restricted spaces, with and without mounted and towed implements
	1.3 Explain how to set up the machine for work	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up towed implements ready for work <input type="checkbox"/> Configuring and setting up mounted implements ready for work <input type="checkbox"/> Configuring and setting up power take-off drives ready for work <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
			1.4 Explain how to undertake the specified work tasks

Unit 43: Operating an Industrial Forklift Truck

Unit reference number: F/503/6452

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating industrial counterbalanced forklifts to lift and transfer loads in the workplace within the relevant sector of industry.

As the name suggests, a forklift consists of two forks to lift and place loads into position. It is a mobile machine and can access hard-to-reach areas. Forklifts generally fall into two categories: industrial and rough terrain. Industrial forklifts are commonly used in warehouses and around loading docks. They have small tyres designed to run on paved surfaces and are usually powered by an electric motor or an internal combustion engine. Some smaller industrial forklifts are powered by an electric motor. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate an industrial forklift truck. This includes identifying components and understanding the requirements to lift and move loads, travel and manoeuvre through restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate an industrial forklift truck and will be able to demonstrate competence in lifting and placing various loads. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria	Unit amplification
1 Understand how to operate an industrial forklift truck	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
	1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for travel <input type="checkbox"/> Actions required for travelling to and manoeuvring in restricted spaces (with and without loads)
	1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for lifting and transferring duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services

Unit 44: Operating a Reach Truck

Unit reference number: R/503/6424

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating reach trucks to lift and transfer loads in the workplace within the relevant sector of industry.

Lifting and moving loads is an important operation across a range of industrial sectors such as construction and logistics. Reach trucks are commonly used to lift and transport loads in tall shelving structures. Different varieties are available to suit a range of shelf depths. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a reach truck. This includes identifying components and carrying out operational and functional checks. Learners will apply this knowledge to operate a reach truck and will be able to demonstrate competence in picking, lifting and placing loads to and from designated areas. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a reach truck	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for travel <input type="checkbox"/> Actions required for travelling to and manoeuvring in restricted spaces (with and without loads)
		1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for lifting and transferring duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
		1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for lifting and removing various loads, up to the full working height <input type="checkbox"/> Actions required for transferring and placing loads accurately at given locations <input type="checkbox"/> Actions required for placing and removing loads from a vehicle <input type="checkbox"/> Actions required to maintain safe and tidy working areas
	1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting <input type="checkbox"/> Recharging procedures

Unit 45: Operating a Transporter Loader/Securer STGO

Unit reference number: K/503/6445

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with knowledge and understanding of transporters (STGO) to enable them to carry out loader and securer duties in the movement of loads.

A transporter loader/securer is used for the transportation of plant items to and from a construction site, travelling on public highways. The loads they carry can be either Special Type General Order (STGO) or non-STGO. To put it simply, STGO is an abnormal load and is allowed under special conditions. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a transporter loader/securer STGO. This includes identifying components, understanding procedures to set up and configure for lifting and transporting duties and negotiating inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a transporter loader/securer STGO and will be able to demonstrate competence in placing, guiding, securing and removing loads from the transporter. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria		Unit amplification
1	Understand how to operate a transporter loader/securer STGO	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use checks on the transporter and prime mover <input type="checkbox"/> Functional and operational checks
		1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site and public highway travel, loaded and unloaded
		1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing the area for loading and unloading duties <input type="checkbox"/> Configuring and setting up the machine for lifting and transferring duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services <input type="checkbox"/> Arranging, using and complying with communication procedures

Learning outcomes	Assessment criteria	Unit amplification
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> □ Actions required for loading or directing and positioning different items of plant on and off a trailer □ Actions required for arranging, securing and making ready items of plant in preparation for travel on the public highway □ Legislative requirements for transporting loads on the highway □ Considerations required when planning a route on the public highway □ Requirements when undertaking loading and unloading on the public highway
	1.5	<ul style="list-style-type: none"> □ Shut down, isolation and securing procedures □ Road Traffic Act requirements
2	2.1	<ul style="list-style-type: none"> □ Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation □ Pre-use checks on the transporter and prime mover □ Functional and operational checks
	2.2	<ul style="list-style-type: none"> □ Configuring and setting up the machine for site and public highway travel, loaded and unloaded □ Travelling to the loading and unloading area

Learning outcomes	Assessment criteria	Unit amplification	
	2.3	Set up the machine for work	
		<ul style="list-style-type: none"> <input type="checkbox"/> Positioning, preparing and setting up the transporter for receiving and removing loads <input type="checkbox"/> Establishing the communication methods and loading arrangements with the plant operator (if applicable) <input type="checkbox"/> Operating near hazards, underground and overhead services safely 	
	2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Placing or guiding each load into the transporter bed <input type="checkbox"/> Positioning and securing all loads in preparation for travel <input type="checkbox"/> Removing or guiding loads from the transporter <input type="checkbox"/> Stowing all equipment and returning the transporter to the park position <input type="checkbox"/> Parking the transporter
	2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 46: Operating a Transporter Loader/Securer non-STGO

Unit reference number: H/503/6444

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with knowledge and understanding of transporters (non-STGO) to enable them to carry out loader and securer duties in the movement of loads.

A transporter loader/securer is used for the transportation of plant items to and from a construction site, travelling on public highways. The loads these carry can be either Special Type General Order (STGO) or non-STGO. To put it simply, STGO is an abnormal load and is allowed under special conditions. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a transporter loader/securer non-STGO. This includes identifying components, understanding procedures to set up and configure for lifting and transporting duties and negotiating inclines and restricted spaces as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a transporter loader/securer non-STGO and will be able to demonstrate competence in placing, guiding, securing and removing loads from the transporter. The emphasis is on compliance with signals and the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes	Assessment criteria		Unit amplification
1 Understand how to operate a transporter loader/securer non-STGO	1.1	Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use checks on the transporter and prime mover <input type="checkbox"/> Functional and operational checks
	1.2	Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site and public highway travel, loaded and unloaded
	1.3	Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing the area for loading and unloading duties <input type="checkbox"/> Configuring and setting up the machine for lifting and transferring duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services <input type="checkbox"/> Arranging, using and complying with communication procedures

Learning outcomes	Assessment criteria	Unit amplification
	1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> □ Actions required for loading or directing and positioning different items of plant on and off a trailer □ Actions required for arranging, securing and making ready items of plant in preparation for travel on the public highway □ Legislative requirements for transporting loads on the highway □ Considerations required when planning a route on the public highway □ Requirements when undertaking loading and unloading on the public highway
	1.5	<ul style="list-style-type: none"> □ Shut down, isolation and securing procedures □ Road Traffic Act requirements
2	2.1	<ul style="list-style-type: none"> □ Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation □ Pre-use checks on the transporter and prime mover □ Functional and operational checks
	2.2	<ul style="list-style-type: none"> □ Configuring and setting up the machine for site and public highway travel, loaded and unloaded □ Travelling to the loading and unloading area

Learning outcomes	Assessment criteria	Unit amplification
2.3	Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Positioning, preparing and setting up the transporter for receiving and removing loads <input type="checkbox"/> Establishing the communication methods and loading arrangements with the plant operator (if applicable) <input type="checkbox"/> Operating near hazards, underground and overhead services safely
2.4	Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Placing or guiding each load into the transporter bed <input type="checkbox"/> Positioning and securing all loads in preparation for travel <input type="checkbox"/> Removing or guiding loads from the transporter <input type="checkbox"/> Stowing all equipment and returning the transporter to the park position <input type="checkbox"/> Parking the transporter
2.5	Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

Unit 47: Operating a Loader Compressor

Unit reference number: A/503/6417

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating loader compressors to extract materials in the workplace within the relevant sector of industry.

As the name suggests, loader compressors are used to place materials in transporting vehicles and other receptacles. In addition to the loading function, pneumatic tools can be attached to carry out breaker tasks. This plant plays an important part in moving materials both within and outside construction sites and operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a loader compressor. This includes identifying components and understanding procedures to travel over rough terrain, inclines and restricted spaces, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a loader compressor, and will be able to demonstrate competence in loading a vehicle using materials from a stockpile and spread over an area, as well as in carrying out breaker tasks. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a loader compressor	1.1	Explain how to prepare the machine for work
		1.2	Explain how to drive and manoeuvre the machine
		1.3	Explain how to set up the machine for work
		1.4	Explain how to undertake the specified work tasks
		1.5	Explain how to shut down the machine
			<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks <input type="checkbox"/> Configuring and setting up machine for site and highway travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground and level surfaces, loaded and unloaded <input type="checkbox"/> Actions required for manoeuvring in restricted spaces <input type="checkbox"/> Configuring and setting up the machine for loading duties <input type="checkbox"/> Configuring and setting up for pneumatic tool operations <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services <input type="checkbox"/> Actions required for placing materials into transporting vehicles and receptacles <input type="checkbox"/> Procedures for clearing spread materials <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting

Learning outcomes	Assessment criteria	Unit amplification
2 Be able to operate a loader compressor	<p>2.1 Prepare the machine for work</p> <p>2.2 Drive and manoeuvre the machine</p> <p>2.3 Set up the machine for work</p> <p>2.4 Undertake the specified work tasks</p>	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks <input type="checkbox"/> Configuring and setting up the machine for site and highway travel <input type="checkbox"/> Travelling to the work area and passing through a restriction <input type="checkbox"/> Reversing the machine with a fully-loaded bucket in a straight line for a specified distance <input type="checkbox"/> Preparing and setting up the loader compressor for the relevant work <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely <input type="checkbox"/> Loading the vehicle to capacity using material from a stockpile; after completing, re-deposit at the original place and spread the material <input type="checkbox"/> Loading the vehicle to capacity using the spread material; after completing, deposit material at the stockpile <input type="checkbox"/> Positioning the compressor at a given point and preparing the breaker for work; test running the breaker; after completing, detaching the breaker from the compressor <input type="checkbox"/> Cleaning and tidying the work area <input type="checkbox"/> Stowing all equipment and preparing the machine ready for transport

Learning outcomes	Assessment criteria	Unit amplification
2.5	Shut down the machine	<input type="checkbox"/> Shut down, isolation and securing procedures

Unit 48: Operating a Soil/ Landfill Compactor

Unit reference number: Y/503/6442

QCF level: 2

Credit value: 5

Guided learning hours: 30

Unit aim

This unit provides learners with the knowledge and understanding for preparing and operating soil/landfill compactors to spread and compact materials in the workplace within the relevant sector of industry.

Waste is compacted first within collection vehicles and later on at landfill sites. The primary aim is to reduce the amount of space that the waste occupies. Landfill compactors essentially perform two main tasks: spreading waste evenly and compacting waste to reduce its volume. They are similar to the ride-on rollers used in compaction operations. Operating the plant competently and safely is a valuable skill.

The initial focus of the unit is to provide the underpinning knowledge required to operate a soil/landfill compactor. This includes identifying components and understanding the requirements to spread and compact waste materials, as well as carrying out operational and functional checks. Learners will apply this knowledge to operate a soil/landfill compactor and will be able to demonstrate competence in spreading a dumped load and forming a cover over it. The emphasis is on compliance with the manufacturer's instructions, safe operation of the machine, dealing with hazards to ensure compliance with acceptable health, safety and welfare practices and completing tasks to given work instructions.

Learning outcomes, assessment criteria and unit amplification

To pass this unit, the learner needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning outcomes		Assessment criteria	Unit amplification
1	Understand how to operate a soil/landfill compactor	1.1 Explain how to prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Principal components, controls, manufacturer's requirements and relevant regulations and legislation <input type="checkbox"/> Pre-use, functional and operational checks
		1.2 Explain how to drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up machine for site travel <input type="checkbox"/> Procedures for travelling over rough, undulating ground, substantial inclines and level surfaces <input type="checkbox"/> Actions required for manoeuvring in restricted spaces
		1.3 Explain how to set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up for spreading and compacting duties <input type="checkbox"/> Procedures to deal with hazards, underground and overhead services
		1.4 Explain how to undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Actions required for spreading and compacting various discharged waste-type materials to specification <input type="checkbox"/> Principles of compaction and the requirements and techniques of waste material compaction
		1.5 Explain how to shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures <input type="checkbox"/> Loading and unloading procedures for machine transporting

Learning outcomes	Assessment criteria	Unit amplification
2 Be able to operate a soil/landfill compactor	2.1 Prepare the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Complying with manufacturer's requirements as per the operator's handbook, other types of information and relevant regulations and legislation <input type="checkbox"/> Pre-use checks <input type="checkbox"/> Functional and operational checks
	2.2 Drive and manoeuvre the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Configuring and setting up the machine for site travel <input type="checkbox"/> Travelling to the work area, up and down the slope (soil compactor only), passing through a restriction (in forward and reverse) and travelling over rough terrain
	2.3 Set up the machine for work	<ul style="list-style-type: none"> <input type="checkbox"/> Preparing and setting up the compactor for relevant work tasks <input type="checkbox"/> Operating machine near hazards, underground and overhead services safely
	2.4 Undertake the specified work tasks	<ul style="list-style-type: none"> <input type="checkbox"/> Spreading dumped loads on the sloping face (landfill compactors) or on a level area (soil compactors) <input type="checkbox"/> Forming a cover over the spread material and levelling <input type="checkbox"/> Parking the compactor
	2.5 Shut down the machine	<ul style="list-style-type: none"> <input type="checkbox"/> Shut down, isolation and securing procedures

12 Further information and useful publications

For further information about the qualification featured in this specification, or other Edexcel qualifications, please call Customer Services on 0844 576 0026 (calls may be monitored for quality and training purposes) or visit our website (www.edexcel.com).

Related information and publications include:

- *Equality Policy*
- *Information Manual* (updated annually)
- *Reasonable Adjustment and Special Considerations for BTEC and Edexcel NVQ Qualifications*
- *Recognition of Prior Learning Policy*
- *Quality Assurance Handbook* (updated annually).

Publications on the quality assurance of BTEC qualifications are available on our website at www.edexcel.com/quals/BTEC/quality/Pages/documents.aspx.

Our publications catalogue lists all the material available to support our qualifications. To access the catalogue and order publications, please go to www.edexcel.com/resources/publications/home.aspx.

13 Professional development and training

Edexcel supports UK and international customers with training related to BTEC qualifications. This support is available through a choice of training options offered in our published training directory or through customised training at your centre.

The support we offer focuses on a range of issues including:

- planning for the delivery of a new programme
- planning for assessment and grading
- developing effective assignments
- building your team and teamwork skills
- developing student-centred learning and teaching approaches
- building functional skills into your programme
- building in effective and efficient quality assurance systems.

The national programme of training we offer is on our website www.edexcel.com/training. You can request customised training through the website or by contacting one of our advisers in the Training from Edexcel team via Customer Services to discuss your training needs.

Our customer service numbers are:

BTEC and NVQ	0844 576 0026
GCSE	0844 576 0027
GCE	0844 576 0025
The Diploma	0844 576 0028
DiDA and other qualifications	0844 576 0031

Edexcel may monitor calls for quality and training purposes.

The training we provide:

- is practical – ideas are developed and applied
- is designed to be supportive and thought provoking
- builds on best practice.
