

# Topic Lesson Plans

## Topic: Introduction to Programming

---

Each Topic starts with an introduction, designed to help introduce the content and encourage students to start to explore more about the topic.

There then follows a Topic Lesson Plan. Topic Lesson Plans are designed to be used by you to deliver the teaching and learning for the topic. Collectively, they should form a small scheme of work with a selection of student activities to bring the topic to life.

Each Topic Lesson Plan includes 3 or 4 activities that are designed to support the learning of the topic to your students, enabling them to develop the Knowledge, Understanding and Skills and provide an opportunity for formative assessment.

The Topic Lesson Plans should be used in conjunction with the following documents:

- Introduction to Programming PowerPoint
- Introduction to Programming Industry Links
- Links to Assessment

### Introduction to the Topic: Introduction to Programming

A lot of people, before entering the programming field, are curious to know how things work behind the scene. How does Google give us a search result regardless of what we are searching? How are we able to connect to someone on Facebook around this world? How do Google Maps work to give us direction anywhere in this world? All these questions inspire young programmers of today.

We are all dependent on technology in our daily life, for entertainment, for communication, and everyday life, but very few people know how to read and write code. There are 7 billion people in the world today and yet only 0.005% of people know how to read and write code.

Five leading companies have the most significant influence on our daily lives, Amazon, Facebook, Google, Apple and Microsoft. Bill Gates, a software programmer and the founder of Microsoft, is considered one of the most powerful and influential people in the world.

Today's programmers can enjoy an attractive salary and numerous career opportunities. They develop problem-solving and logical thinking skills, as well as important interpersonal skills.

## Introduction to the Topic Lesson Plans

These Topic Lesson Plans cover the main elements of understanding the specific data types and declare constants and variables in a programming language. It also covers the main elements of why certain data types are used and in what situations.

We then move on to program structure and arrays and why arrays are a key element of the programming paradigm.

The final elements of the lesson plans cover the functions and features when designing and building a program. The students then get to use Python to develop their own programming skills via a series of tasks and online exercises.

### Topic Lesson Plan No: 1

|  |  |
|--|--|
| <b>Title</b>   | Program Data   |
| <b>Aim and objective</b>   | Understand the use of different data types within programs.<br>Aims: <ul style="list-style-type: none"><li>• Identify different data types</li><li>• Apply commands to manipulate string data</li></ul> Create a program to convert data types |
| <b>How long will this Topic Lesson Plan take to deliver?</b>           | 120 minutes  |
| <b>What knowledge, understanding and skills will students develop?</b> | 2.1.1 Understand the use of, and need for data types<br>2.1.2 Be able to declare and use constants and variables that use appropriate data types   |
| <b>Self-study activities</b>   | Programming Exercises to reinforce learning, exam questions  |
| <b>Activity 1</b>  |  |
| <b>Title</b>   | Matching Exercise  |
| <b>How long will this activity take to deliver?</b>                    | 20 minutes   |

|   |   |
|---|---|
| <b>Instructions</b>                                 | Use 'Matching Exercise.pptx.'<br><br>Use arrows to connect the data to the correct data type.   |
| <b>Worksheets / templates</b>                       | Matching Exercise.pptx  |
| <b>English, maths and digital skills</b>            | E5 Synthesise information.  |
| <b>Industry Links</b>                               | N/A   |
| <b>Activity 2</b>                                   |   |
| <b>Title</b>  | Data Types  |
| <b>How long will this activity take to deliver?</b> | 30 minutes  |
| <b>Instructions</b>                                 | <p>Each student should give an example of a program that would use each of the data types below. Assign a suitable variable for each data type.</p> <ul style="list-style-type: none"> <li>• String</li> <li>• Integer</li> <li>• Float</li> <li>• Char</li> <li>• Boolean</li> </ul> <p>Explain why it is essential to use the correct data types when programming.</p> <p>Define what is meant by 'casting' concerning data types.</p> <p>Provide meaningful examples of 'casting'.</p> |
| <b>Worksheets / templates</b>                       | N/A   |
| <b>English, maths and digital skills</b>            | M4 Using rules and formulae.<br>M5 Processing data.<br>D4 Process and analyse numerical data  |
| <b>Industry Links</b>                               | N/A   |
| <b>Activity 3</b>                                   |   |

|   |   |
|---|---|
| <b>Title</b>  | Python Exercise   |
| <b>How long will this activity take to deliver?</b> | 70 minutes  |
| <b>Instructions</b>                                 | <p>Work out what code is needed to output the following from the string "Welcome to Python"</p> <p>Students should create a tutorial to show how to manipulate strings in Python.</p> <p>The tutorial should include screenshots of commented code with associated output together with a written explanation of the code's purpose.</p> <p>They could include:</p> <ul style="list-style-type: none"> <li>• String slicing</li> <li>• String indexing</li> <li>• String length</li> <li>• String upper and lower case</li> </ul> |
| <b>Worksheets / templates</b>                       | N/A   |
| <b>English, maths and digital skills</b>            | <p>E5 Synthesise information.<br/> M4 Using rules and formulae.<br/> M5 Processing data.<br/> D2 Design, create and edit documents and digital media.<br/> D3 Communicate and collaborate.<br/> D4 Process and analyse numerical data.</p>  |
| <b>Industry Links</b>                               | N/A   |

| <b>Topic Lesson Plan No: 2</b>   |   |
|--|---|
| <b>Title</b>   | Introduction to Iteration   |
| <b>Aim and objective</b>   | <p>Understand how to use count-controlled loops within algorithms and programs.</p> <p>Aims</p> <ul style="list-style-type: none"> <li>• Explain the purpose of iteration within algorithms.</li> <li>• Demonstrate the use of definite iteration with count-controlled loops</li> </ul> <p>Create Python programs which make use of count-controlled loops</p> |
| <b>How long will this Topic Lesson Plan take to deliver?</b>           | 60 minutes  |
| <b>What knowledge, understanding and skills will students develop?</b> | <p>2.1.3 Understand the use of, and need for, the following data structures</p> <p>2.1.4 Understand how to manage variables within a program, including</p>   |
| <b>Self-study activities</b>   | <p>Writing Variables:<br/> <a href="https://www.w3resource.com/python-exercises/python-basic-exercises.php">https://www.w3resource.com/python-exercises/python-basic-exercises.php</a></p>  |
| <b>Activity 1</b>  |   |
| <b>Title</b>   | Program Structure   |
| <b>How long will this activity take to deliver?</b>                    | 40 minutes  |
| <b>Instructions:</b>   | <ol style="list-style-type: none"> <li>1. Write a program in Python to display the first 10 natural numbers</li> <li>2. Write a Python program to find the sum of first 10 natural numbers.</li> <li>3. Write a program in Python to display n terms of natural numbers and their sum.</li> </ol>   |
| <b>Worksheets / templates</b>  | N/A   |

|   |   |
|---|---|
| <b>English, maths and digital skills</b>            | M7 Interpreting and representing with mathematical diagrams.<br>M8 Communicating using mathematics.   |
| <b>Industry Links</b>                               | Version in C: <a href="https://www.w3resource.com/c-programming-exercises/for-loop/index.php">https://www.w3resource.com/c-programming-exercises/for-loop/index.php</a>   |
| <b>Activity 2</b>                                   |   |
| <b>Title</b>  | FOR Loops and Answers   |
| <b>How long will this activity take to deliver?</b> | 20 minutes  |
| <b>Instructions</b>                                 | <p>Presentation on iteration and why we use loops.</p> <p>Ask students to show some examples, compare to linear code and how much more efficient it is using repetition in most cases.</p> <p>Get the students to explain which code version is best used in which situation.</p> |
| <b>Worksheets / templates</b>                       | N/A   |
| <b>English, maths and digital skills</b>            | M4 Using rules and formulae.<br>M5 Processing data.<br>M6 Understanding data and risk.<br>M7 Interpreting and representing with mathematical diagrams.<br>M8 Communicating using mathematics  |
| <b>Industry Links</b>                               | N/A   |

| <b>Topic Lesson Plan No: 3</b>   |  |
|--|--|
| <b>Title</b>   | Arrays and Files   |
| <b>Aim and objective</b>   | <p>Be familiar with the use of one and two-dimensional arrays in algorithms and programming.</p> <p>Aims:</p> <ul style="list-style-type: none"> <li>• Demonstrate what is meant by an array</li> <li>• Create and manipulate 1D arrays containing string data</li> <li>• Create and manipulate 1D arrays containing numerical data</li> </ul> <p>Understand how and why we write outputs from a program to a file.</p> <p>Aims:</p> <ul style="list-style-type: none"> <li>• Identify commands used to write information to a file.</li> <li>• Experiment with different commands to change how data are written to a file</li> <li>• Create programs that make appropriate use of file writing commands.</li> </ul>  |
| <b>How long will this Topic Lesson Plan take to deliver?</b>           | 150 minutes  |
| <b>What knowledge, understanding and skills will students develop?</b> | <p>2.4.1 Understand how sequence, selection (branching) and iteration are used within programs and algorithms</p> <p>2.4.2 Be able to write, interpret and debug code that makes use of sequence</p> <p>2.4.3 Be able to write, interpret and debug code that makes use of selection (branching)</p> <p>2.4.4 Be able to write, interpret and debug code that makes use of iteration</p> <p>2.5.3 Be able to write code that makes use of user-written and pre-written code (built-in functions, standard libraries)</p> <p>(Self-Study)</p> <p>2.5.1 Understand the benefits and drawbacks of using prewritten code</p> <p>2.5.2 Be able to select and justify the use of pre-written code provided by the Python programming language (built-in functions, standard libraries)</p> |

|   |   |
|---|---|
|   | <p>2.6.1 Understand the need for different types of input validation and be able to write, interpret and debug code that makes use of these validation techniques including</p> <p>2.6.2 Understand the need to develop reliable and robust code.</p>   |
| <b>Self-study activities</b>                        | <p>Pre-written code: <a href="https://skillcrush.com/blog/python-programming-examples/">https://skillcrush.com/blog/python-programming-examples/</a></p> <p>Input Validation: <a href="https://automatetheboringstuff.com/2e/chapter8/">https://automatetheboringstuff.com/2e/chapter8/</a></p> |
| <b>Activity 1</b>                                   |   |
| <b>Title</b>  | Array Student Task  |
| <b>How long will this activity take to deliver?</b> | 60 minutes  |
| <b>Instructions</b>                                 | Complete the Student task PPT. and associated activities.   |
| <b>Worksheets / templates</b>                       | Array Task.pptx   |
| <b>English, maths and digital skills</b>            | E5 Synthesise information.<br>M4 Using rules and formulae.<br>M5 Processing data.   |
| <b>Industry Links</b>                               | N/A   |
| <b>Activity 2</b>                                   |   |
| <b>Title</b>  | Plenary Starters  |
| <b>How long will this activity take to deliver?</b> | 30 minutes  |
| <b>Instructions</b>                                 | <p>Students should explain how writing to files works on Python.</p> <p>Write their code for how this would work.</p> <p>Explain how arrays work, why we use them, benefits and drawbacks Python, but can adapt for their chosen</p>  |
